satelettronica

Technical information should always be available to the foremen and mechanics, because their careful and constant adherence to the instructions is essential to ensure vehicle road-worthiness and safety. In addition, the normal basic safety precautions for working on motor vehicles must, as a matter of course, be observed.

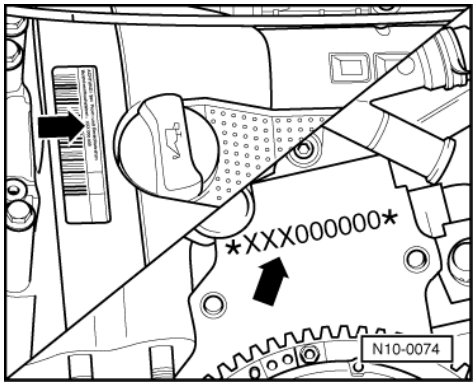
1 - Technical data

1.1 - Technical data

1.2 - Engine number



-> The engine number ("Code letters" and "Serial number") can be found on the front of the cylinder block at the gearbox end below the thermostat housing.

Additionally there is a sticker on the toothed belt guard with "Engine code" and "Serial number".

The engine code is also included on the vehicle data plate.

1.3 - Engine data

Codes		AKK	ANW	AUD
Manufactured		11.99 ▸	11.99 ▸	06.00 ▸
Exhaust emissions fulfil		MVEG II standard	D4 standard	EU4 standard

satelettronica

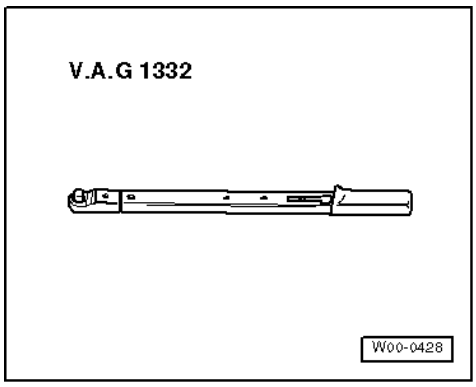
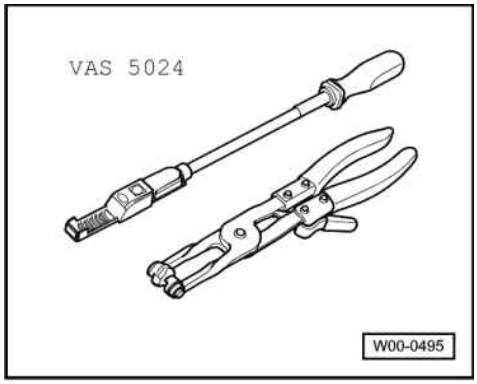
Special tools, workshop equipment, test and measuring appliances and auxiliary items required

- 2024 A Lifting tackle
- VW 313 Support clamp
- VW 540 Engine and gearbox support
- V.A.G 1202 A Workshop crane
- V.A.G 1306 Drip tray
- V.A.G 1331 Torque wrench (5...50 Nm)



- -> V.A.G 1332 Torque wrench (40...200 Nm)



- VAS 5024 Assembly tool for spring-type clips
- G 000 100 grease
- Cable tie

1.2 - Notes on removing

Note:

Check whether a coded radio is installed as during the forthcoming work sequences the battery earth strap must be disconnected. Obtain radio code first if necessary.

- The engine is removed forwards together with the gearbox.
- With ignition switched off disconnect battery earth strap.
- All cable ties which are opened or cut open when removing engine, must be replaced in the same position when installing engine.
- Remove air cleaner:

=> Repair group 24; Servicing injection; Dismantling and assembling air cleaner Servicing injection Dismantling and assembling air cleaner

- Open and close the expansion tank sealing cap to release pressure in cooling system.
- Disconnect all electric wires from gearbox, alternator and starter and move clear.

- Loosen or separate the following components:
  - The hose from intake manifold to activated charcoal filter system
  - The vacuum hose from inlet manifold at brake servo
  - The connector from coolant temperature sender and oil pressure switch
  - The collective connectors below the thermostat housing
  - The ignition transformer and Hall sender connectors
  - The engine speed sender connector
  - Lambda probe connector in exhaust manifold
  - The 2-pin connector from knock sensor (rear of cylinder block)
  - The road speed sender connector
  - The reversing light connector

satelettronica

- The earth wire from the gearbox
- The cable holder connection (front of gearbox)

- Pull off/disconnect all other electrical connections as necessary from engine and lay to one side.

> Warning!
> Fuel supply lines are under pressure! Before removing from hose connection wrap a cloth around the connection. Then release pressure by carefully pulling hose off connection.

- Now separate fuel supply as well as fuel return pipes at connecting point on suspension strut turret.
- Disconnect clutch cable:

=> 5-speed manual gearbox 085; Repair group 30; Servicing clutch control Servicing clutch control

- Disconnect selector mechanism from gearbox.

=> 5-speed manual gearbox 085; Repair group 34; Servicing selector mechanism Servicing selector mechanism

- Drain coolant => Page 103 .
- Loosen hose clips and pull coolant hoses off coolant thermostat housing.

Vehicles with power assisted steering

- Remove power steering reservoir and tie up.
- Unscrew power steering pressure hose clamp on front of engine console.
- Loosen belt pulley securing bolts from power steering vane pump.
- Remove ribbed belt => Page 21 .
- Unbolt power steering vane pump and secure to sub-frame with wire; hoses remain connected:

=> Running gear, axles, steering; Repair group 48; Assembly overview: vane pump, reservoir, hydraulic lines; Removing and installing power steering vane pump. Assembly overview: vane pump, reservoir, hydraulic lines Removing and installing power steering vane pump.

Vehicles with air conditioner

- Removing air conditioner compressor:
- Observe additional information and removal instructions =>Page 11

Continuation for all vehicles

- Remove left and right-hand drive shaft on gearbox and tie up:

=> Running gear, axles, steering; Repair group 40; Servicing front suspension; Removing and installing drive shafts Servicing front suspension Removing and installing drive shafts

- Separate front exhaust pipe from exhaust manifold => Page 152 , exhaust manifold, front exhaust pipe and catalyst with attachments.
- Removing lock carrier with attachments:

=> General body repairs; Repair group 50; Body, front; Removing and installing lock carrier with attachments. Body, front Removing and installing lock carrier with attachments.

- -> Attach lifting tackle 2024 A as follows and lift slightly with workshop crane:

  Pulley end:
  2nd hole in hook at position 1

  Flywheel end:
  2nd hole in hook at position 5

Warning! The hooks and locating pins must be secured with locking pins.

Notes:

- The positions marked 1...4 on the bar must be towards the pulley end.
- The holes in the hook rails are counted up from the hook.

- Unbolt assembly at gearbox and engine mountings.
- Pull assembly out forwards. When doing this, the assembly should be lifted and turned as necessary.

Note:

When the assembly is lifted off, it must be carefully guided to prevent damage to the bodywork.

1.3 - Securing engine to assembly stand

When working on the engine, it should be secured to the assembly stand support clamp VW 313 using the engine and gearbox box support VW 540.

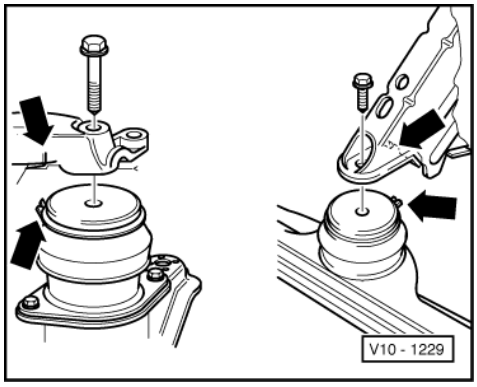
Work sequence

- Remove gearbox.
- Secure engine to support clamp VW 313 using engine and gearbox support VW 540.

1.4 - Notes on installing

Installation is carried out in the reverse sequence, when doing this note the following:

- Check clutch release bearing for wear, renew if necessary.
- Lightly grease clutch release bearing, release bearing guide sleeve and splines on input shaft with G 000 100.
- Check whether the dowel sleeves for centralising engine/gearbox are in the cylinder block, install if necessary.
- When swinging the assembly in, ensure that clearance exists between the drive shafts.



Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

- -> When installing the engine mounting ensure that the rib on the rear right console also the recess on the front console locates on the lugs of the bonded rubber mounting -arrows-.
- Align engine mountings stress-free by rocking.

Note:

Assembly mounting tightening torques

=> Page 8 .

- Install drive shafts:

=> Running gear, axles, steering; Repair group 40; Servicing front suspension; Removing and installing drive shafts Servicing front suspension Removing and installing drive shafts

- Installing P.A.S. vane pump:

=> Running gear, axles, steering; Repair group 48; Assembly overview: vane pump, reservoir, hydraulic lines; Removing and installing power steering vane pump. Assembly overview: vane pump, reservoir, hydraulic lines Removing and installing power steering vane pump.

- Installing front exhaust pipe => Page 152 , Exhaust manifold, front exhaust pipe and catalyst with attachments.

Vehicles with air conditioner

- Install air conditioner compressor.

Continuation for all vehicles

- Electrical connections and routing:

=> Electrical system; Repair group 97

- Install ribbed belt => Page 21 .
- Installing clutch cable:

=> 5-speed manual gearbox 085; Repair group 30; Servicing clutch control Servicing clutch control

- Connecting selector mechanism to gearbox.

=> 5-speed manual gearbox 085; Repair group 34; Servicing selector mechanism Servicing selector mechanism

- Renew pointed bolt for securing shift finger (clean threads in shift finger).
- Filling with coolant => Page 103
- Install air cleaner:

=> Repair group 24; Servicing injection system; Dismantling and assembling air cleaner. Servicing injection system Dismantling and assembling air cleaner.

- Perform the work sequence "Procedure after interrupting voltage supply".

=> Repair group 24; Engine control unit; Procedure after interrupting voltage supply. Engine control unit Procedure after interrupting voltage supply.

- Carry out a test drive and interrogate fault memory:

=> Repair group 01; Fault memory; Interrogating and erasing fault memory of engine control unit Fault memory Interrogating and erasing fault memory of engine control unit

satelettronica

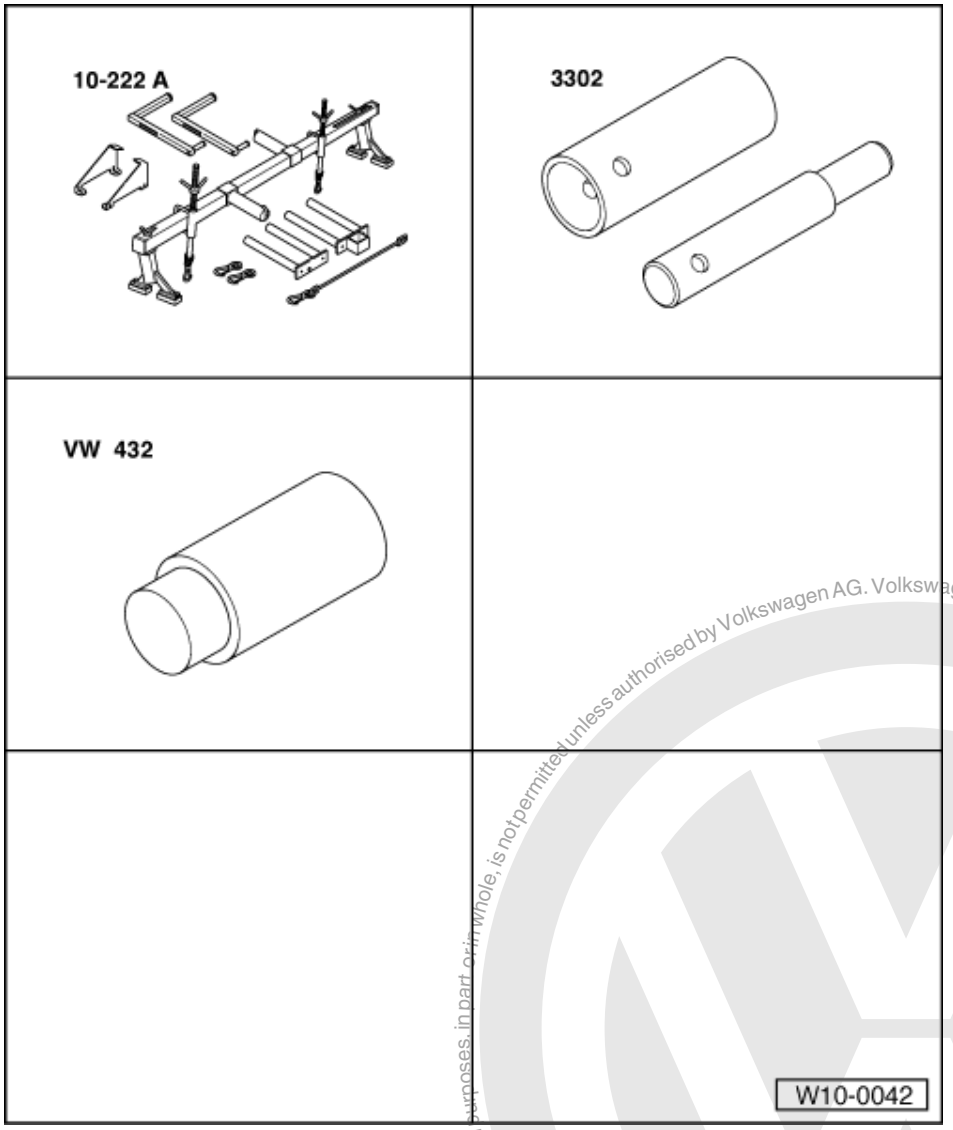
1.7 - Replacing engine carrier rubber mounting



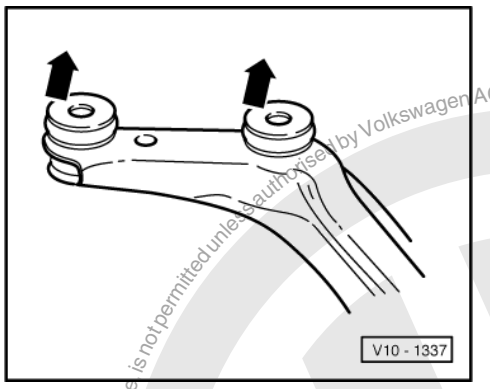
Special tools, workshop equipment, test and measuring appliances and auxiliary items required

- 10-222A Engine support bracket with legs 10-222A/1
- 3302 Peening tool
- VW 432 Press piece

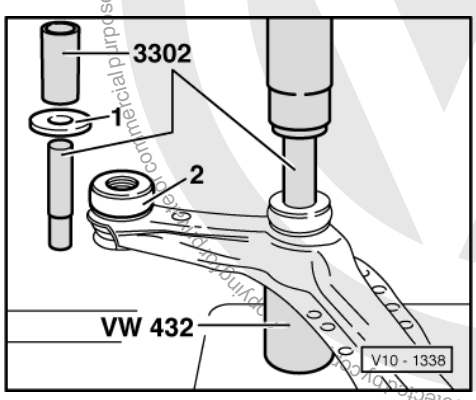
Work sequence

- Fit engine support bracket 10-222A with legs 10-222A/1.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica



- Locate support bracket in lifting eye on left of cylinder head and take-up weight of engine.
- Remove engine carrier.
- -> Lever off washers from the spacer sleeves with pliers (replace any washers which are damaged e.g. bent washers).
- Pull out spacer sleeves and detach rubber mounting.
- Fit new rubber mounting and insert spacer sleeves as far as possible.



- -> Fit washers -1- over peening tool 3302 onto the rubber mounting -2-.
- Fit press sleeve of peening tool 3302 and using a press, press the washers onto the spacer sleeves and peen. Use VW 432 as packing.
- Remove any resulting protrusion/burr on the peening.

1.8 - Additional information and removal instructions for vehicles with air conditioner

Warning!
The air conditioning system refrigerant circuit must not be opened.

Note:

To prevent damage to condenser and also to the refrigerant lines/hoses, ensure that the pipes and hoses are not stretched, kinked or bent.

To facilitate removing and installing the engine without opening the refrigerant circuit:

- Detach air conditioning fluid container.
- Unbolt retaining clamp(s) for refrigerant lines.
- Remove ribbed belt => Page 21 .
- Remove lock carrier with attachments:

=> General body repairs; Repair group 50; Body, front; Removing and installing lock carrier with attachments.
Body, front Removing and installing lock carrier with attachments.

satelettronica

- Remove air conditioner compressor with attached refrigerant hoses from support:

=> Heating, air conditioner system; Repair group 87

- Set the lock carrier with radiator, condenser and air conditioner compressor to the side so that the refrigerant hoses and pipes -arrows- are not strained.

satelettronica

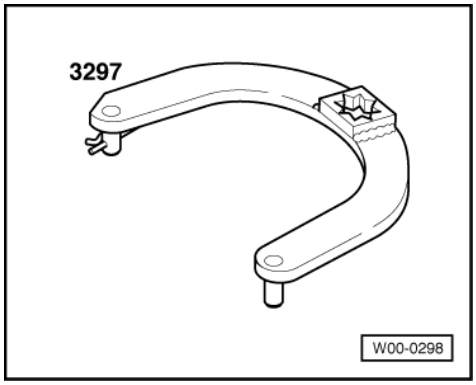
1.2 - Removing and installing ribbed belt



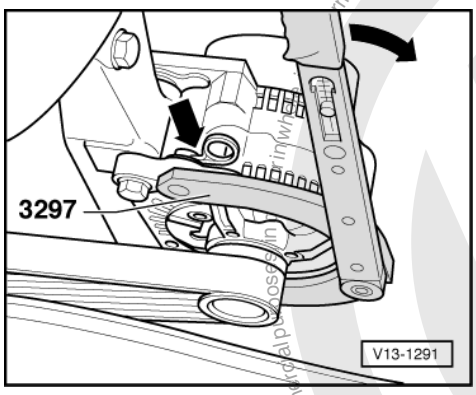
Vehicles without power assisted steering

Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- -> 3297 Tensioning lever

Work sequence

- Mark direction of rotation of ribbed belt.
- Loosen alternator securing bolts.



- -> Install tensioning lever 3297, secure with spring clip and swivel alternator down (to turn 3297 use e.g. torque wrench).
- Remove/fit ribbed belt

Note:

When installing the ribbed belt ensure that it sits correctly in the pulleys.

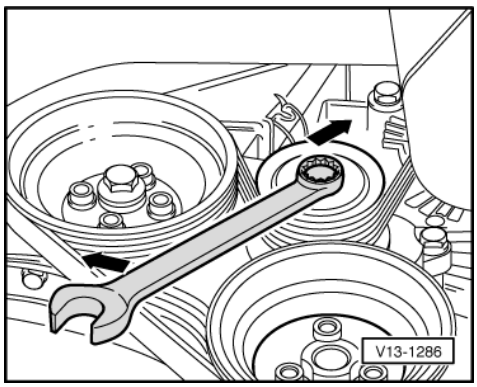
- After fitting ribbed belt with alternator loose, rotate engine several times (approx. 10 revolutions of engine by operating starter briefly.
- First tighten lower and then upper alternator bolts to 25 Nm.

Vehicles with power assisted steering

Removing

- Remove ribbed belt cover.
- Mark ribbed belt direction of rotation.

satelettronica

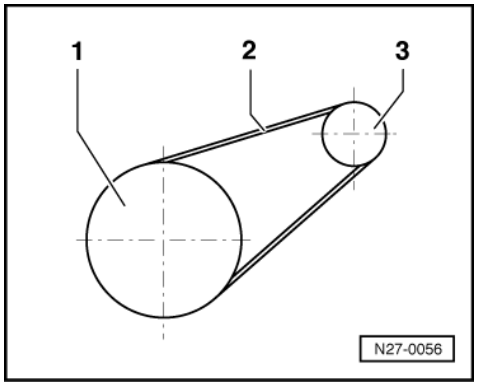


- -> Using a spanner on the securing bolt swivel tensioning roller in direction of arrow.
- Remove ribbed V-belt.

Installing

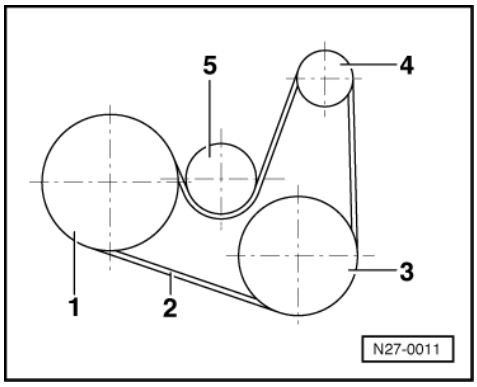
- Place ribbed V-belt onto crankshaft pulley first. Slide belt onto tensioning roller last.

Ribbed belt routing



-> Basic belt drive

1 - Crankshaft/pulley
2 - Ribbed belt
3 - Pulley - Alternator

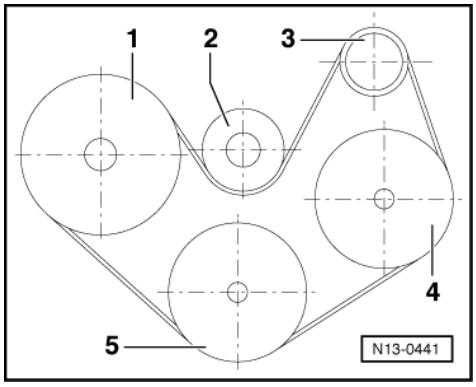


-> Belt drive without air conditioner compressor

1 - Crankshaft/pulley
2 - Ribbed belt
3 - Pulley - P.A.S. vane pump
4 - Pulley - Alternator

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

5 - Tensioner



-> Belt drive with air conditioner compressor

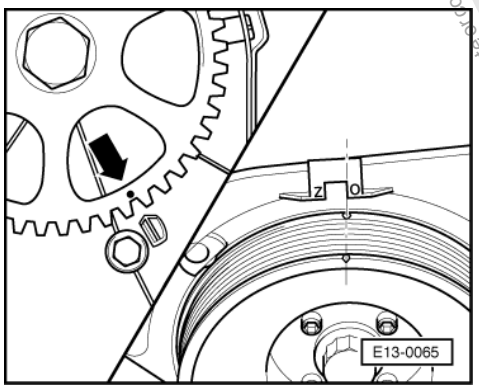
1 - Crankshaft/pulley
2 - Tensioner
3 - Pulley - Alternator
4- Air conditioner compressor
5 - Pulley - P.A.S. vane pump

Note:

When installing the ribbed V-belt, ensure the belt runs in the right direction and seats correctly on the belt pulleys.

The rest of the assembly is basically a reverse of the dismantling sequence.

1.3 - Checking valve timing

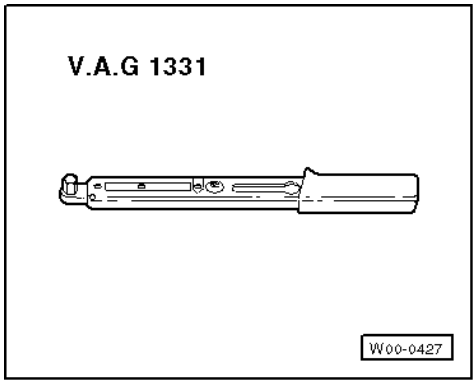


- Remove the toothed belt guard upper part.
- -> Set crankshaft to top dead centre No. 1 cylinder.

The notch on the pulley must align with the edge of the -O- marking on the lower toothed belt guard and the dot on the camshaft sprocket -arrow- with the marking on the rear toothed belt guard.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

1.4 - Removing and installing toothed belt



(Adjusting valve timing)

Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- V.A.G 1331 Torque wrench (5...50 Nm)

Removing

- Remove air cleaner:

=> Repair group 24; Servicing injection; Dismantling and assembling air cleaner Servicing injection Dismantling and assembling air cleaner

- Remove ribbed belt => Page 21 .
- Remove belt pulley as well as upper and lower toothed belt guard.
- Mark D.O.R. of toothed belt.
- Release tensioner and take off toothed belt.

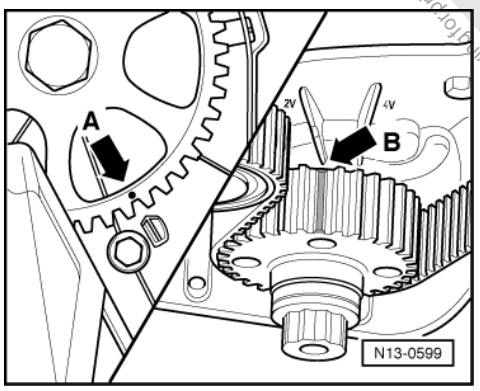
Installing

Prerequisites

- The engine must be no more than warm to touch.
- The pistons must not be positioned at TDC.

Note:

If a piston is at TDC the valves could strike the piston when turning the camshaft.

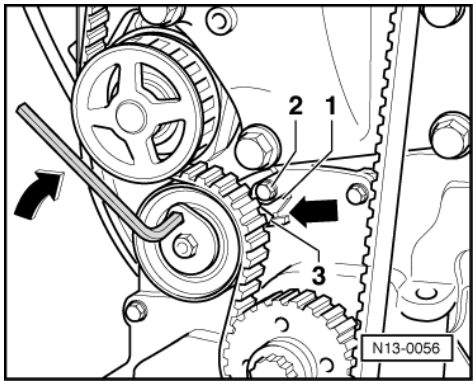


Work sequence

- -> Set camshaft sprocket to mark -arrow A-.

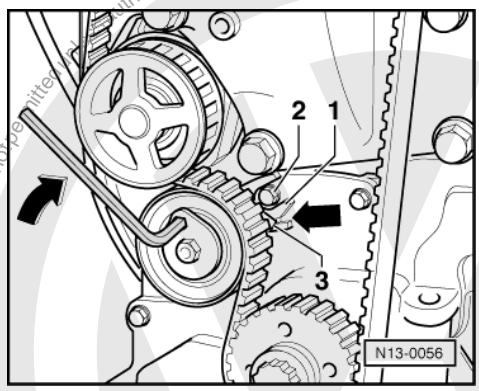
Protected by copyright. Copyright by Volkswagen AG.
Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document.
Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG.
satelettronica

- Set crankshaft to TDC No. 1 cylinder. The chamfered tooth on the crankshaft toothed belt sprocket must align with the marking on the sealing flange -arrow B-.
- Fit toothed belt. For used belts note direction of rotation.



- -> Tighten tensioning roller securing bolt hand-tight. The slot in the base plate -1- must locate around securing bolt -2- .
- Tension toothed belt by turning the tensioning roller in direction of arrow until the indicator -3- aligns with the groove in the base plate -arrow-.
- Tighten clamping nut on tensioning roller.
  Tightening torque: 20 Nm

- Now turn the crankshaft two turns in engine direction of rotation until it is again at top dead centre No. 1 cylinder.



The TDC marking for crankshaft and camshaft sprockets must align; adjust if necessary.
-> The tensioning roller indicator must align again with the notch in the base plate -arrow-.

If the indicator and notch do not align:

- Retension toothed belt and repeat test.
- Install toothed belt guard upper and lower parts.
- Install belt pulley (note fixing arrangement).
- Refit the ribbed belt and the cover.

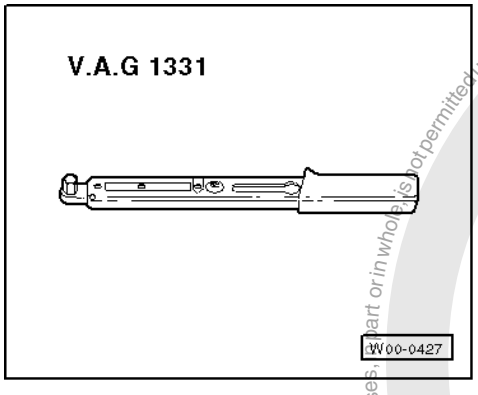
Note:

When installing the ribbed belt ensure that it sits correctly in the pulleys.

The rest of the assembly is basically a reverse of the dismantling sequence.

Protected by copyright. Copyright Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG.
satelettronica

1.5 - Checking semi-automatic toothed belt tensioning roller



Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

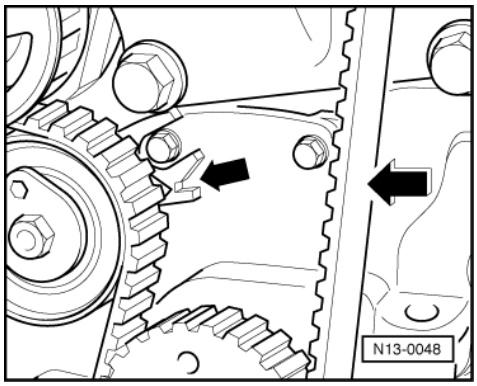
- V.A.G 1331 Torque wrench (5...50 Nm)

Test sequence

- Remove air cleaner:

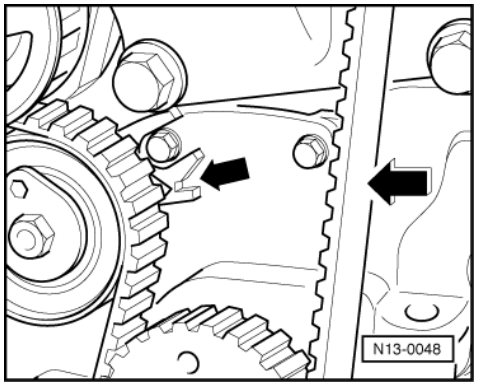
=> Repair group 24; Servicing injection; Dismantling and assembling air cleaner Servicing injection Dismantling and assembling air cleaner

- Remove ribbed belt => Page 21 .
- Remove belt pulley as well as upper and lower toothed belt guard.



- Now turn the crankshaft two turns in direction of rotation until it is at top dead centre No. 1 cylinder.
- -> Note the position of the tensioning roller indicator -arrow-. Press the toothed belt with firm thumb pressure. The indicator must move.
- Release tension on toothed belt.

- Turn crankshaft two turns in engine direction of rotation.



Protected by copyright. Copying for private or commercial purposes, part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

- -> Then check the position of the tensioning roller indicator -arrow-. It must have returned to its initial position.

If tensioning roller does not return to initial position:

- Replace tensioning roller.

If the tensioning roller is OK:

- Reinstall belt pulley and toothed belt guard upper and lower parts.
- Refit the ribbed belt and the cover.

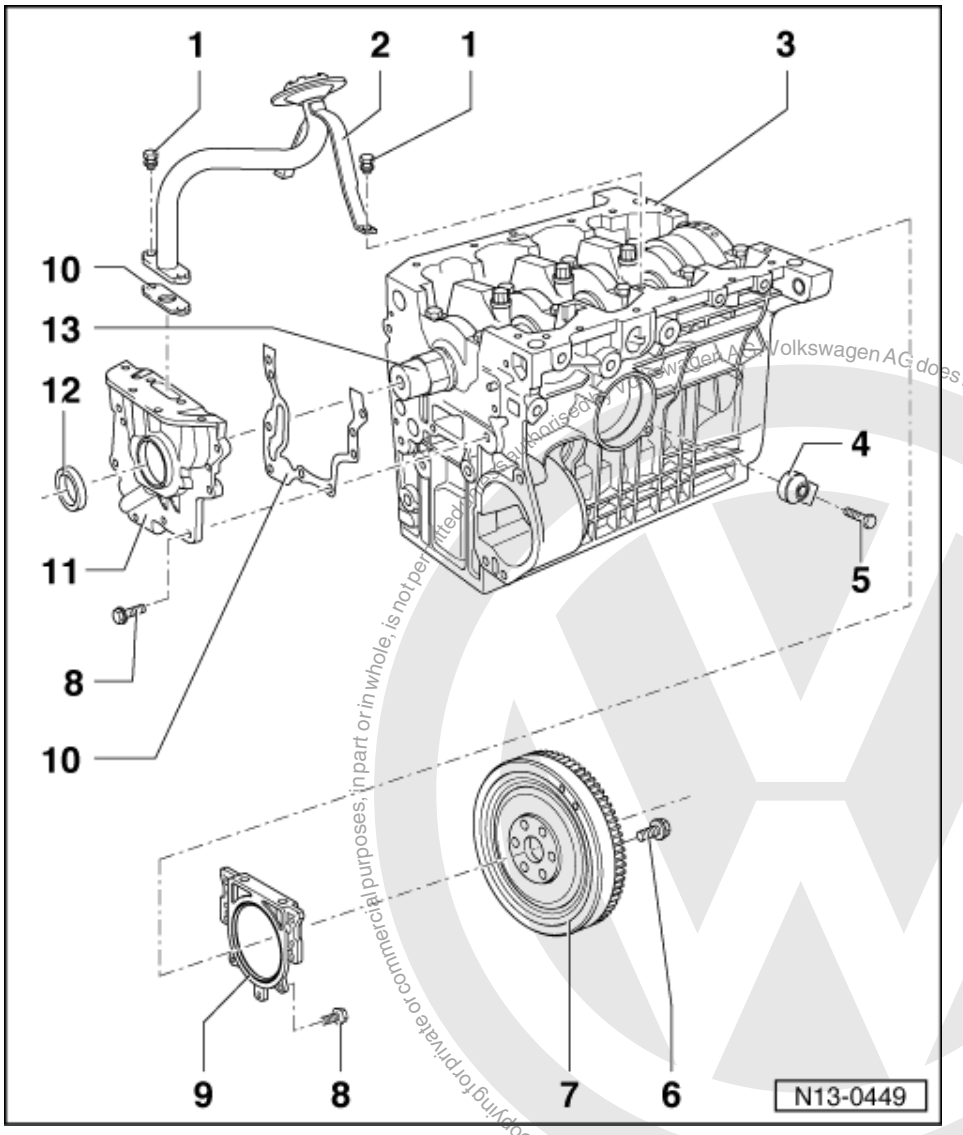
Note:

When installing the ribbed belt ensure that it sits correctly in the pulleys.

The rest of the assembly is basically a reverse of the dismantling sequence.

2 - Removing and installing cylinder block, sealing flange and flywheel

2.1 - Removing and installing cylinder block, sealing flange and flywheel

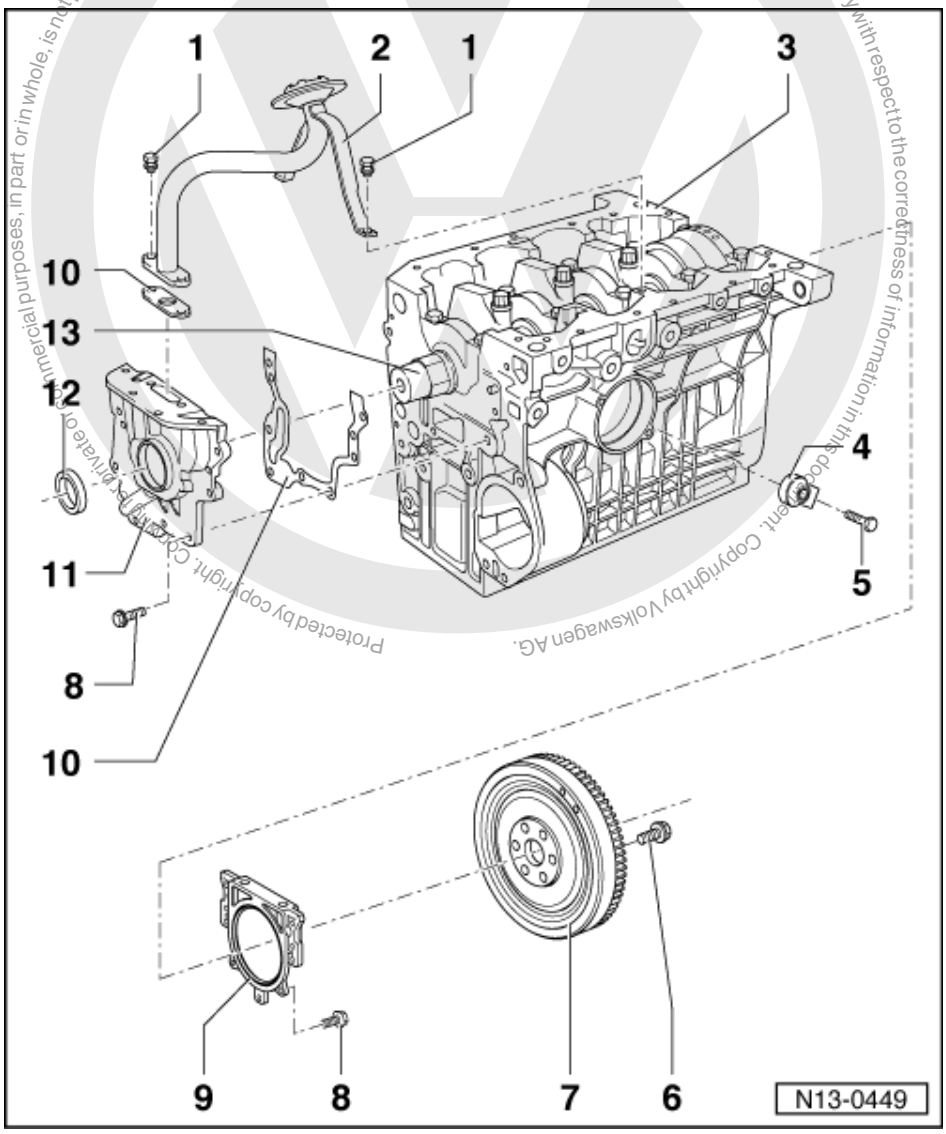


satelettronica
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

2.2 - Aluminium cylinder block

Protected by copyright. Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG. Reproduced or commercial purposes, in part or in whole, is not permitted without the consent of Volkswagen AG.

Warning!
The crankshaft must not be removed. Just loosening the main bearing caps will cause deformation of the cylinder block bearing pedestals. This deformation will cause a reduction of the bearing clearance. Even if the bearing shells are not renewed bearing damage could occur due to a different bearing clearance.
If the bearing cap bolts are loosened, the cylinder block must be replaced complete with the crankshaft.
Measuring the main bearing clearance is not possible with normal workshop equipment.



Note:

For repairs to the clutch:

=> 5-Speed manual gearbox 085; Repair group 30; Servicing clutch Servicing clutch

1 10 Nm
2 Suction pipe
- Clean strainer if soiled

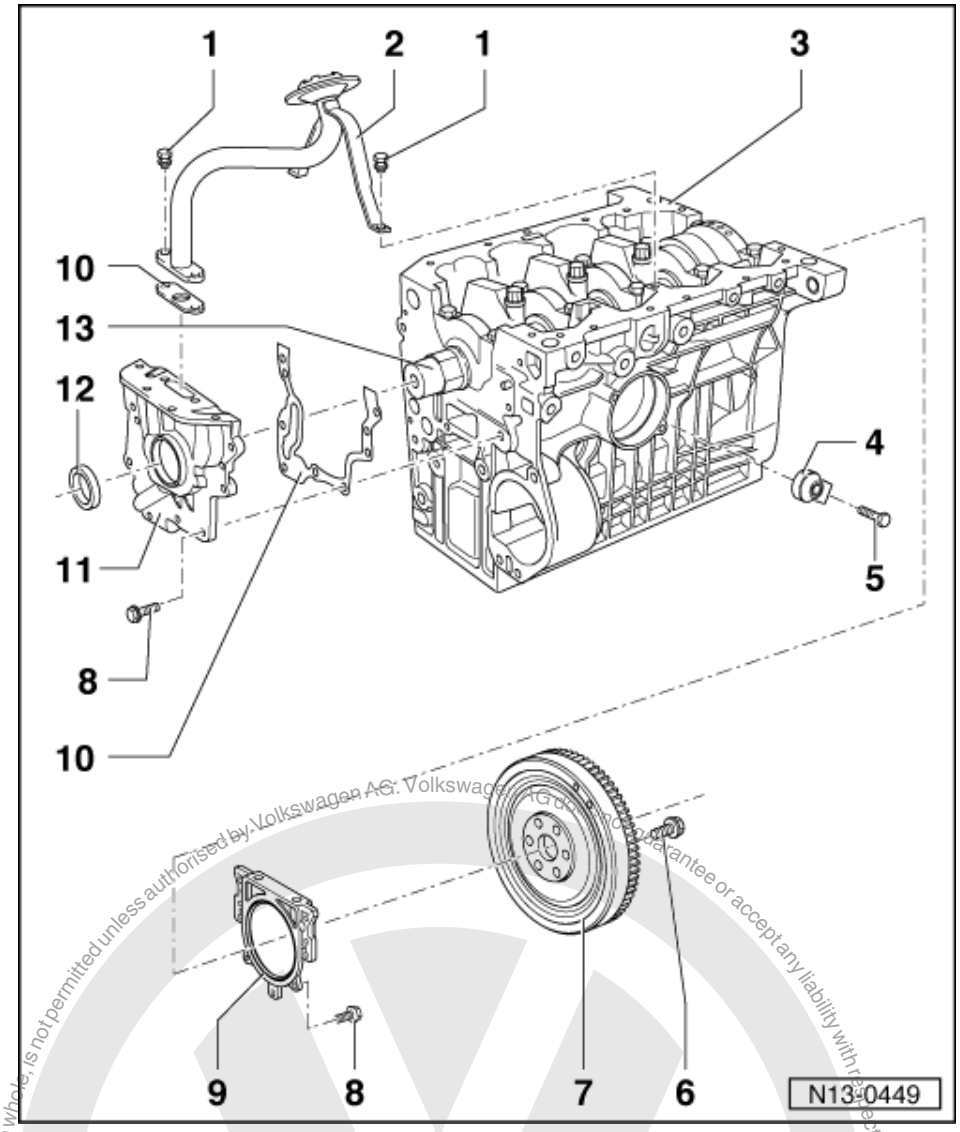
3 Aluminium cylinder block

satelettronica

- Dismantling and assembling pistons and conrods
  => Page 43

4 Knock sensor

5 20 Nm
- Tightening torque influences the function of the knock sensor



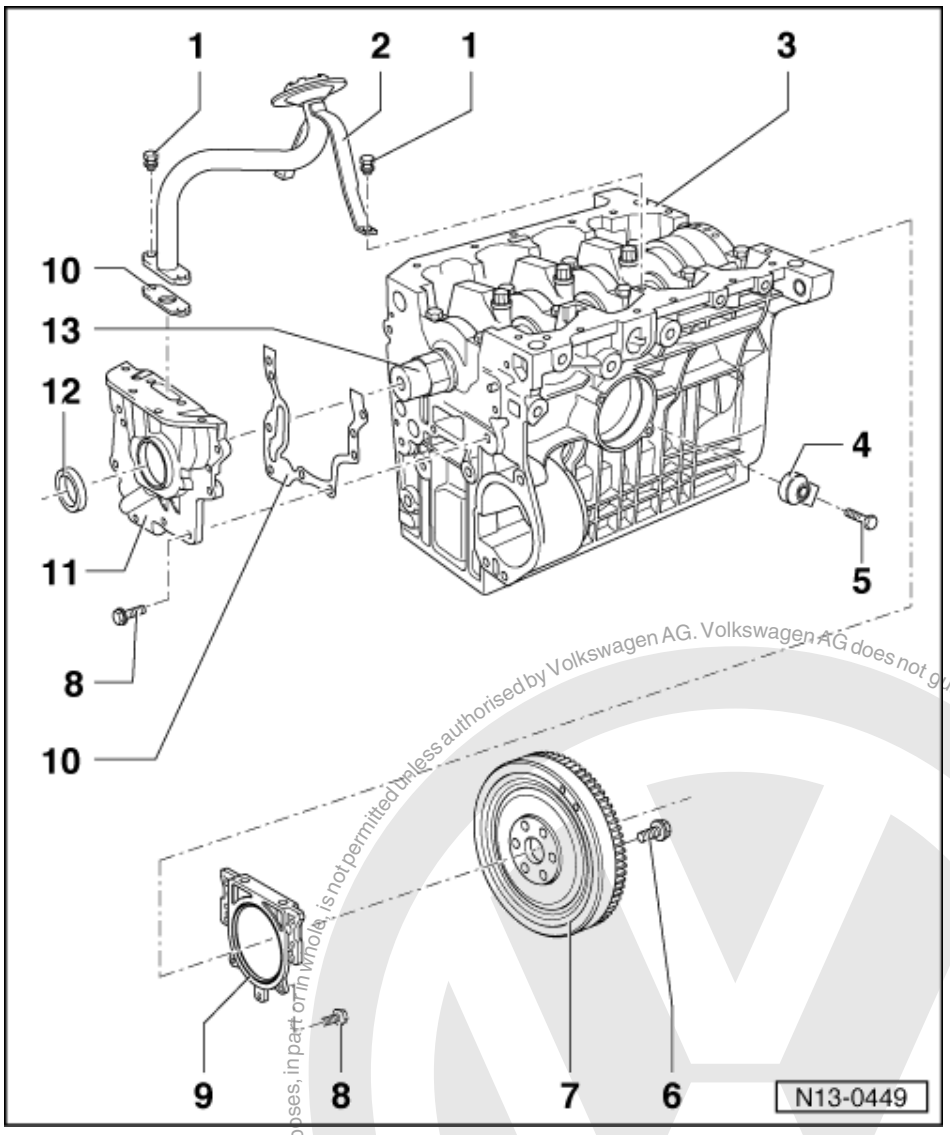
6 60 Nm + 1/4 turn (90 °) further
- Renew
- The turning further can be done in several stages
- The turning further angle can be checked with a commercial protractor e.g. Hazet 6690

7 Flywheel
- To remove and install flywheel counter-hold with 3067

8 12 Nm
- Renew

9 Sealing flange with sender wheel and oil seal
- Only renew complete with oil seal and sender wheel
- Removing and installing sealing flange =>Page 33 , Renewing crankshaft sealing flange -flywheel end-

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica



10 Gasket
- Renew

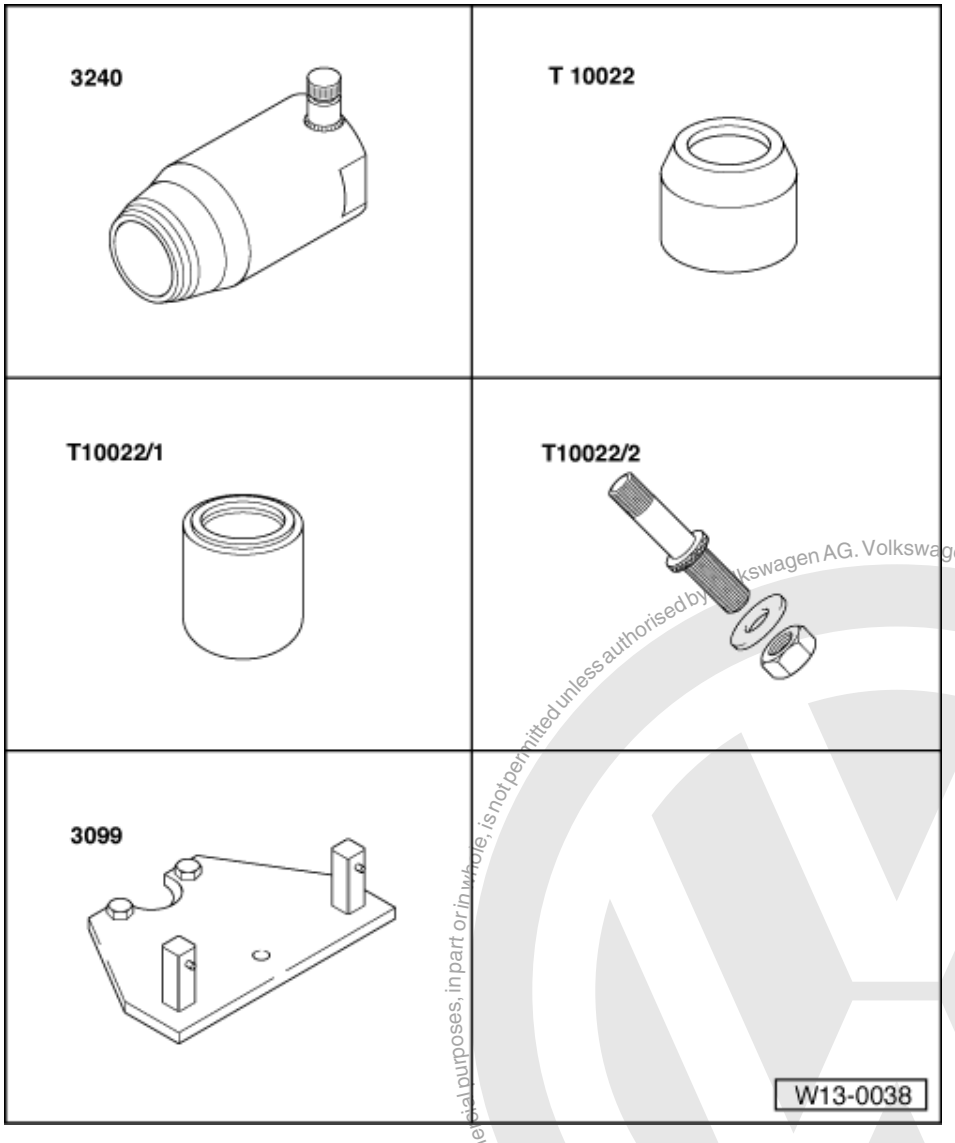
11 Oil pump
- Only renew complete
- When installing note follower -item 13 - on crankshaft
- Must be located on dowel sleeves
- Removing and installing => Page 79 , Removing and installing parts of lubrication system

12 Oil seal
- Renewing => Page 31

13 Follower
- Coat with oil before installing oil pump

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

2.3 - Renewing crankshaft oil seal -belt pulley end



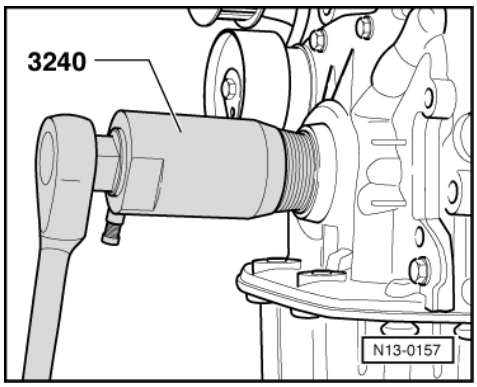
Special tools, workshop equipment, test and measuring appliances and auxiliary items required

- 3240 Oil seal extractor
- T10022 Sleeve
- T10022/1 Press piece
- T10022/2 Spindle
- 3099 Counter-hold tool

Removing

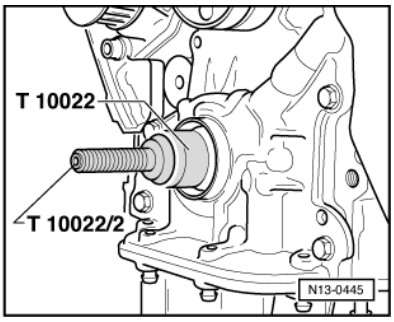
- First remove toothed belt
  => Page 24 .
- Then remove crankshaft toothed belt sprocket. To do this, screw on counter-hold tool 3099 to toothed belt sprocket (first press off cable guide on oil sump).
- To guide oil seal extractor screw crankshaft sprocket securing bolt into crankshaft onto stop.
- Unscrew inner part of oil seal extractor 3240 two turns (approx. 3 mm) out of the outer part and lock with knurled screw.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

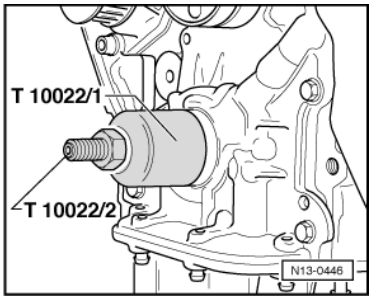


- -> Lubricate threaded head of oil seal extractor, place it in position and exerting firm pressure screw it as far as possible into oil seal.
- Loosen knurled screw and turn inner part against crankshaft until the oil seal is pulled out.

Installing



- Lightly oil sealing lip of oil seal.
- -> Fit sleeve T10022 onto crankshaft journal and turn spindle T10022/2 in onto stop.
- Slide oil seal over guide sleeve.



- -> Press in oil seal onto stop with press piece T10022/1.
- Install toothed belt => Page 24
- Install crankshaft toothed belt sprocket and hold with counter-hold 3099.

satelettronica

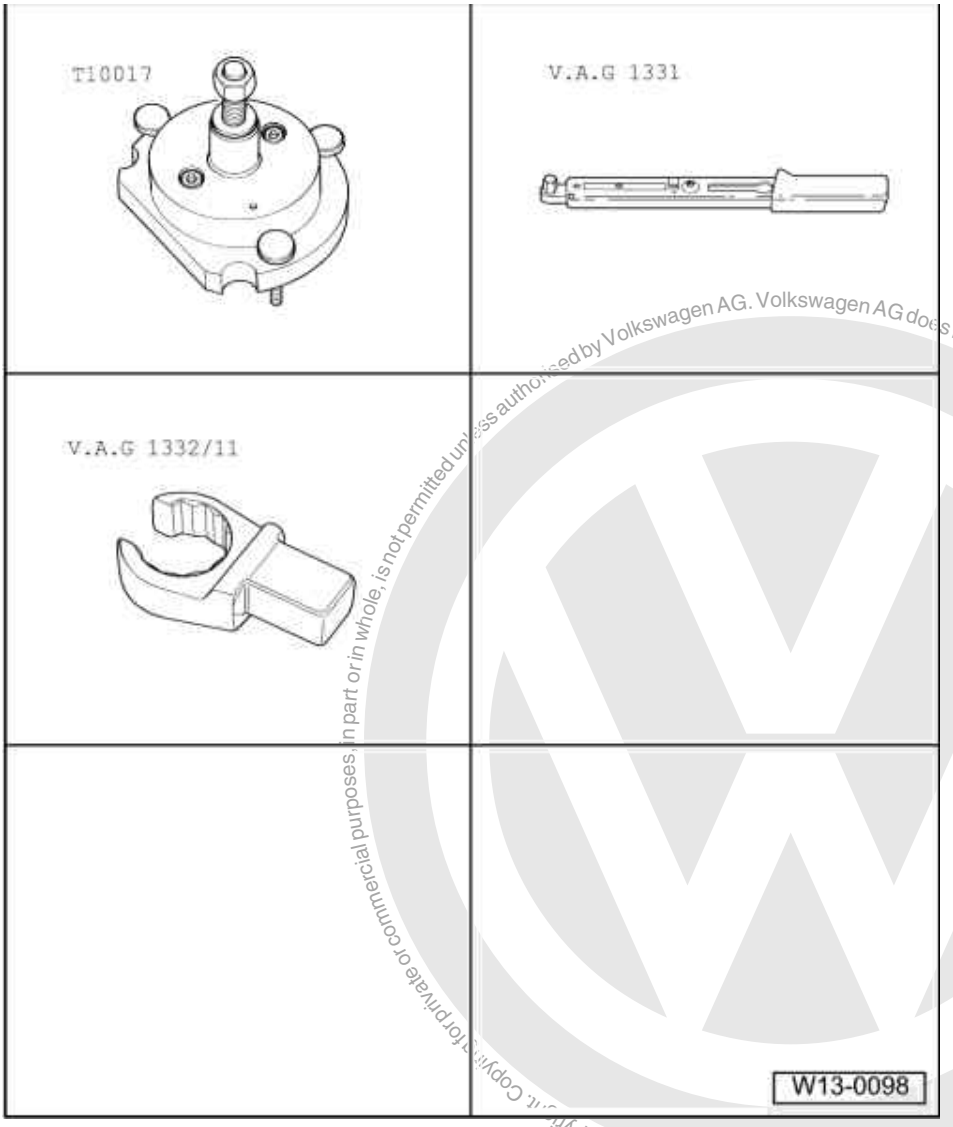
2.4 - Renewing crankshaft sealing flange -flywheel end-



Reproduced by copyright. Copyright for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

satelettronica

Special tools, workshop equipment, test and measuring appliances and auxiliary items required

- T10017 Assembly device
- V.A.G 1331 Torque wrench (5...50 Nm)
- V.A.G 1332/11 Open ring spanner insert
- Hexagon bolts (Qty. 3)
  M6 x 35 mm
- Feeler gauge
- Vernier gauge

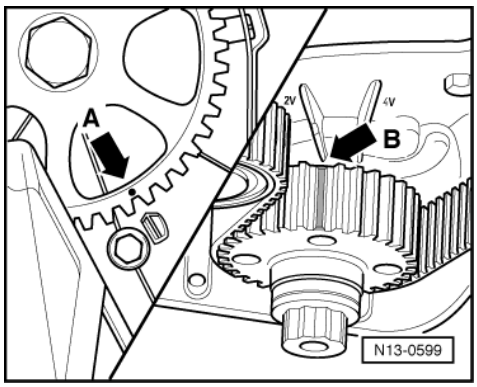
Pressing sealing flange with sender wheel off crankshaft

Notes:

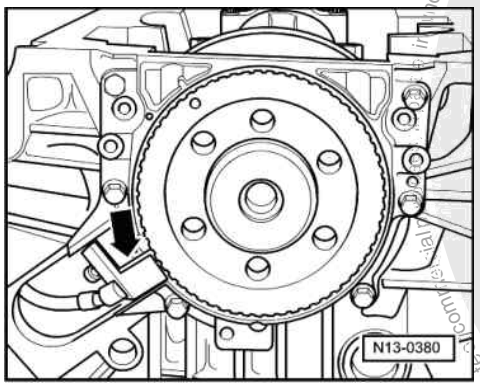
- To show the work sequence more clearly, the sequence is described for a removed engine.
- The work sequence is the same when the engine is in the vehicle and the gearbox removed.

Work sequence

- Remove the flywheel.



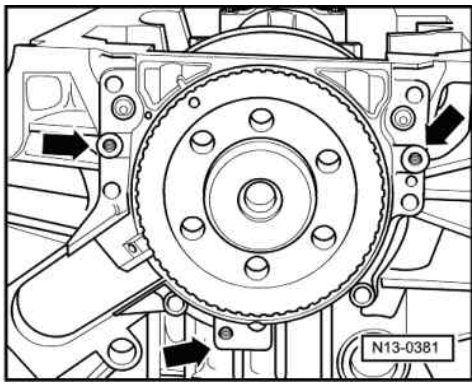
- -> Set camshaft sprocket to mark -arrow A-.
- Set crankshaft to TDC No. 1 cylinder. The chamfered tooth on the crankshaft toothed belt sprocket must align with the marking on the sealing flange -arrow B-.
- Remove oil sump =>Page 85 .



- -> Remove engine speed sender -arrow-.
- Undo sealing flange securing bolts.

Note:

Sealing flange and sender wheel are pressed off the crankshaft together with Qty. 3 M6 x 35 mm bolts.



- -> Screw Qty. 3 M6 x 35 mm bolts into the threaded holes -arrows- of the sealing flange.
- Screw the bolts alternately (a 1/2 turn(180°) for each bolt) into the sealing flange and press the sealing flange along with the sender wheel off the crankshaft.

Pressing sealing flange with sender wheel onto crankshaft

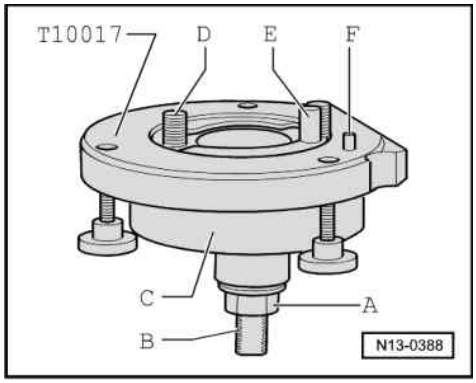
Notes:

- Gradual introduction of a new generation of sealing flanges with PTFE seal (Teflon). The sealing flange with spring ring will continue to be offered as spare part.
  When fitting a new sealing flange, be careful to use the same type of sealing flange that was previously fitted.

Protected by copyright. Copying for private or commercial purposes, in whole or in part, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

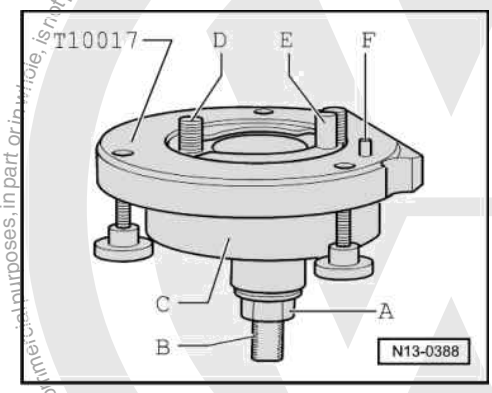
- The sealing flange with a PTFE sealing ring is equipped with a sealing lip support ring. This support ring serves the function of a fitting sleeve and may not be removed prior to installation.
- Sealing flange and sender wheel must not be separated or twisted after removal from packaging.
- The sender wheel of a sealing flange with spring ring has an Elastomer coating on the sealing surface to crankshaft. This coating must never come into contact with dirt or grease.

- The sender wheel is held in its installation position by a fixture on the assembly device T10017 locating pin.
- Sealing flange and seal are one unit and must be replaced together with the sender wheel only.



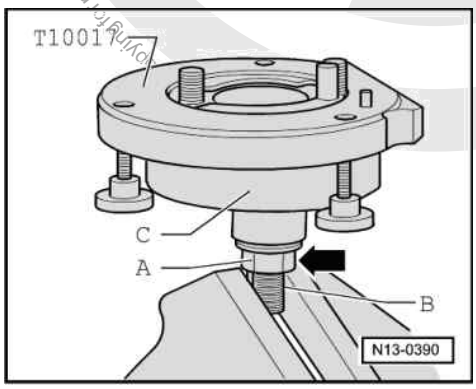
- The assembly appliance T10017 maintains its installation position to the crankshaft via a guide pin which is inserted into a threaded hole in the pressure plate/drive plate.

-> A - Hexagon nut
B - Clamping surface (ground section of spindle)
C - Tool bell housing
D - Socket head bolt
E - Guide pin
F - Locating pin



A-Assembling sealing flange with sender wheel on assembly appliance T10017

- -> Screw hexagon nut -A- to shortly before the clamping surface (ground section) -B- on the threaded spindle.

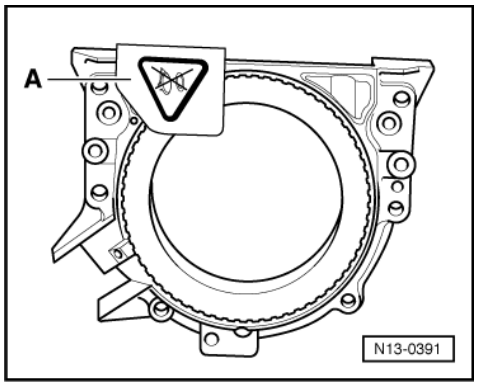


satelettronica

- -> Clamp assembly appliance T10017 in a vice on clamping surface (ground section) on threaded spindle.
- Press assembly bell housing -C- downwards so that it lies on the hexagon nut -A- -arrow-.

Note:

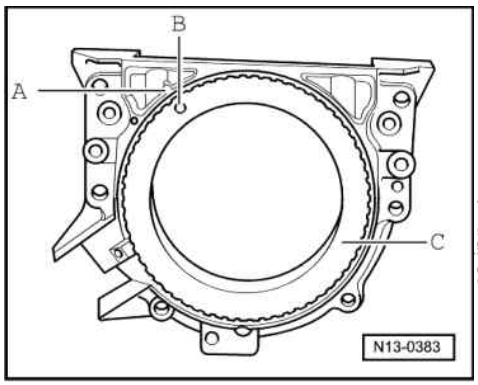
Inner part of assembly appliance and assembly bell housing must be at same height (level).



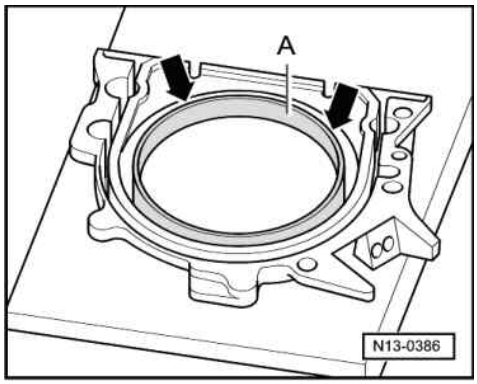
- -> Remove securing clip -A- on new sealing flange.

Note:

The sender wheel must not be taken out of the sealing flange or twisted.

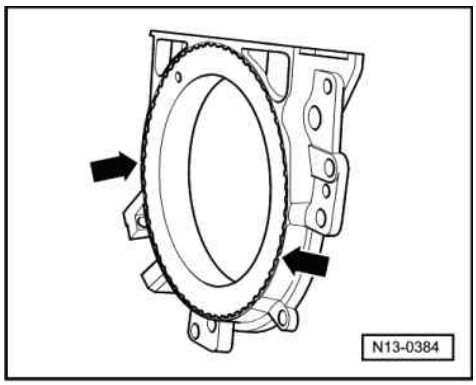


-> The locating hole -B- on the sender wheel -C- must align with the marking -A- on the sealing flange.

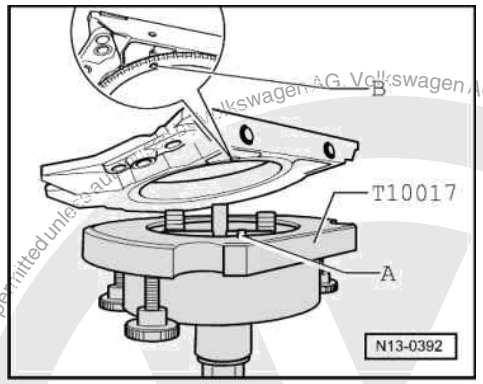


- -> Place the sealing flange (with the forward side downwards) on a clean flat surface.
- Push the sender wheel (sealing lip support ring for PTFE sealing ring) -A- downwards in direction of arrow until it lies on the flat surface.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica



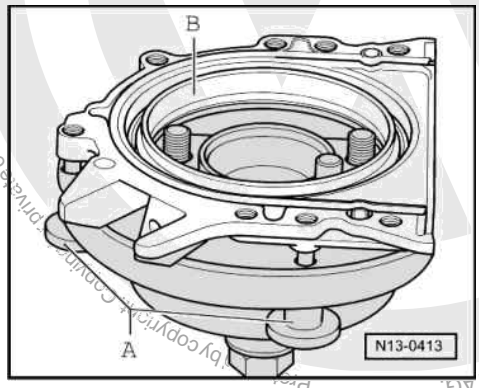
-> The upper edge of the sender wheel and the forward edge of the sealing flange must align -arrows-.



- -> Place the sealing flange, with the forward side on the assembly appliance T10017, so that the locating pin -A- can be inserted in the sender wheel hole -B-.

Note:

Ensure the sealing flange lies flat on the assembly appliance.



- -> Push the sender wheel -B- (Sealing lip support ring for PTFE sealing ring) onto the surface of the assembly appliance whilst tightening the three knurled screws -A-, so that the locating pin cannot slide out of sender wheel hole.

Note:

Ensure the sender wheel remains fixed on the assembly appliance when installing the sealing flange.

B-Assembling appliance T10017 with sealing flange on crankshaft flange

Prerequisites

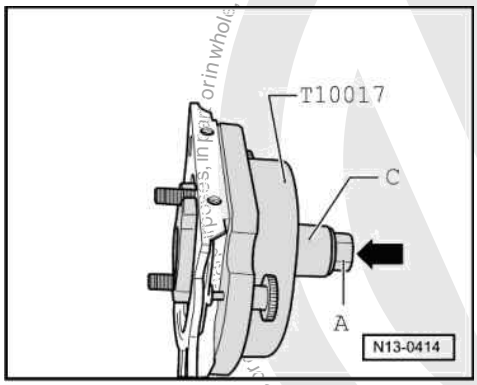
- Crankshaft flange must be free of oil and grease.

Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG. Copyright by Volkswagen AG, Volkswagen AG, Wolfsburg. It is not permitted to use or commercial purposes, in part or in whole, is not permitted unless authorized. Private or commercial purposes, in part or in whole, is not permitted unless authorized by copyright.
satelettronica

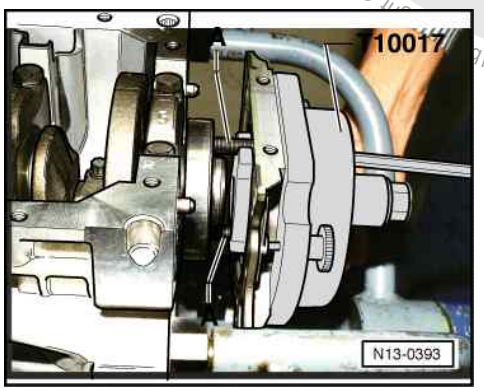
Protected by copyright. Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG. Reproduction, in whole or in part, is not permitted unless authorised by Volkswagen AG.

- Engine positioned at TDC No. 1 cylinder.

Work sequence



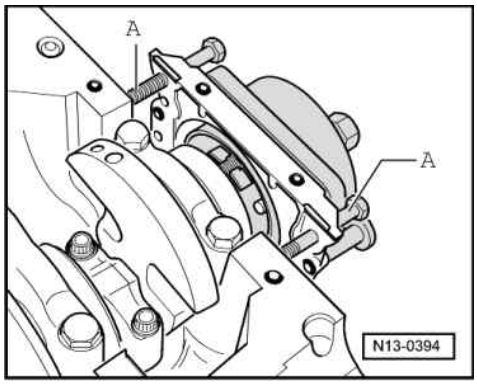
- -> Unscrew hexagon nut -A- to end of threaded spindle.
- Press assembly appliance threaded spindle in direction of arrow, until the hexagon nut -A- lies against the assembly bell housing -C-.
- Align flat side of assembly bell housing towards oil sump side of crankcase sealing surface.



- -> Secure assembly appliance to crankshaft flange with hexagon socket head bolts -A-

Note:

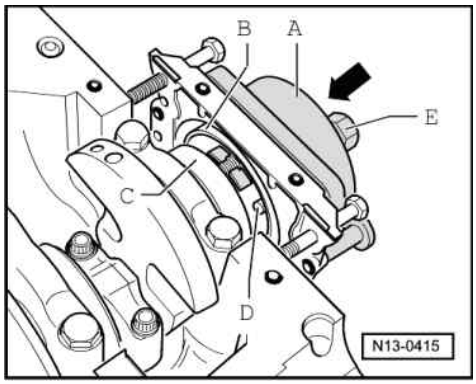
Screw hexagon socket head bolts -A- into crankshaft flange (approx. 5 threads).



- -> Screw two M6 x 35 mm bolts -A- into cylinder block to guide sealing flange.

satelettronica

C-Fitting assembly appliance T10017 onto crankshaft flange

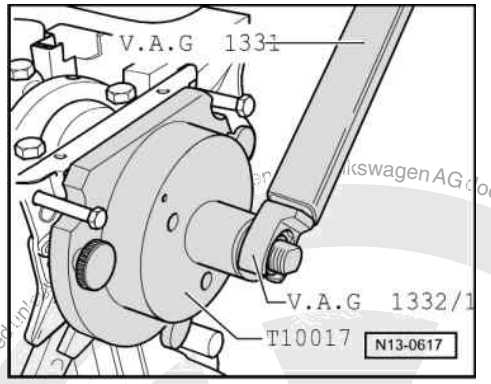


- -> Slide assembly bell housing -A- in direction of arrow by hand until the sender wheel - B- (Sealing lip support ring for PTFE sealing ring) lies against the crankshaft flange -C-.

Note:

The assembly appliance guide pin -D- is guided into threaded hole in crankshaft during the fitting sequence. This ensures the sender wheel reaches its final installation position.

- Hold assembly bell housing in this position and screw both assembly appliance hexagon socket head bolts hand tight.
- Screw hexagon nut -E- onto threaded spindle by hand until it lies against the assembly bell housing -A-.



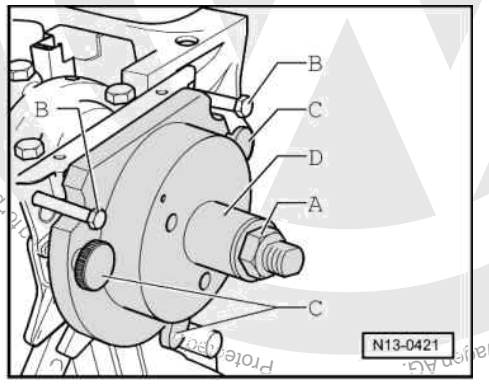
D-Pressing sender wheel onto crankshaft flange with assembly appliance T10017

- -> Tighten assembly device hexagon nut with torque wrench V.A.G 1331 and open ring spanner insert V.A.G 1332/11.
  Tightening torque: 35 Nm

Note:

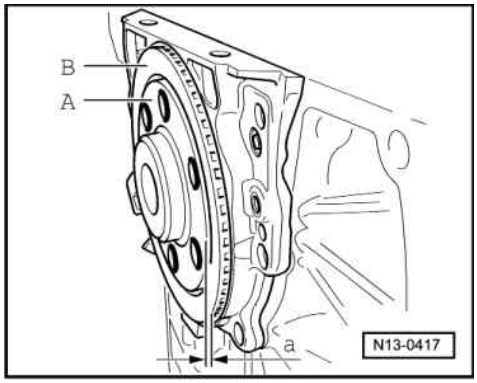
A small air gap must be present between cylinder block and sealing flange after tightening hexagon nut to 35 Nm.

E-Checking sender wheel installation position on crankshaft



satelettronica
Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG. Protected by copyright. Not for private or commercial purposes, in part or in whole, is not permitted.

- -> Screw hexagon nut -A- to end of threaded spindle.
- Remove the two M6 x 35 mm hexagon bolts -B- from cylinder block.
- Screw the three thumb wheels -C- out of sealing flange.
- Pull assembly appliance assembly bell housing -D- back to hexagon nut -A- (Only for sealing flange with spring ring).

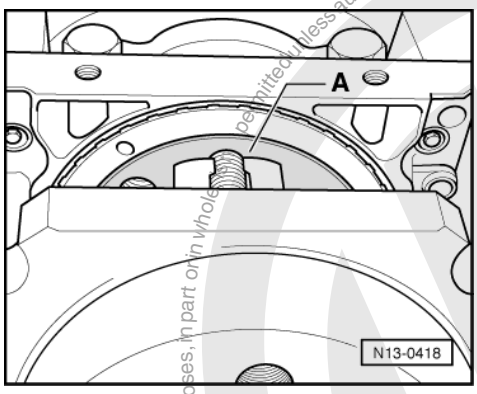


-> The sender wheel has the correct installation position on crankshaft when a gap of
-a- = 0.5 mm
exists between crankshaft flange -A- and sender wheel -B-.

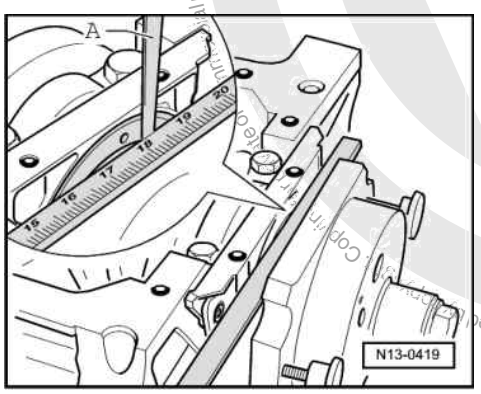
Note:

If the sealing flange has a PTFE sealing ring, completely unbolt the assembly appliance T10017 and remove the sealing lip support ring.

To enable the measurements to be shown more clearly the crankshaft flange is illustrated without the fitted assembly appliance T10017.



- -> Place a vernier caliper against the crankshaft flange -A- (hatched area).



- -> Measure the distance -a- between vernier caliper and sender wheel with a feeler gauge -A-.

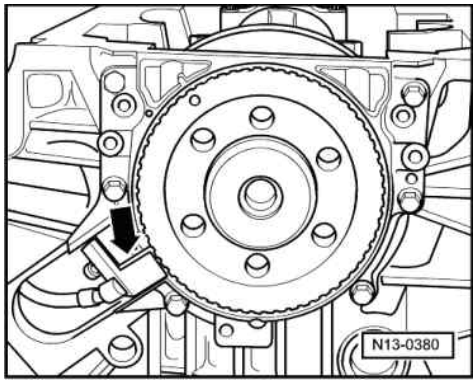
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

Is measurement -a- too small:

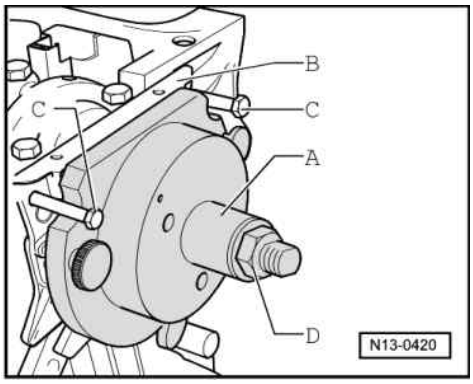
- Re-press sender wheel =>Page 41 .

When dimension -a- is achieved:

- Remove assembly appliance.
- Tighten the new securing bolts for the sealing flange using alternate and diagonal sequence.
  Tightening torque: 12 Nm

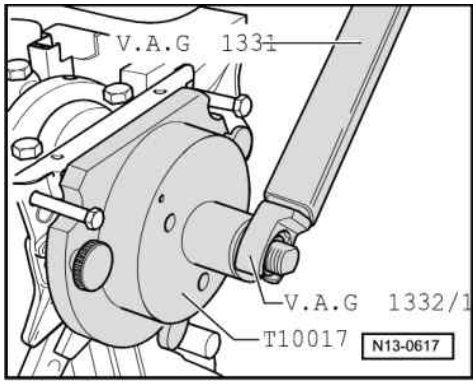


- -> Install engine speed sender -arrow-.
  Tightening torque: 5 Nm
- Install sump => Page 85 .
- Install flywheel with new bolts.



F-Re-pressing sender wheel

- -> Slide assembly bell housing -A- to sealing flange -B- by hand.
- Screw two M6 x 35 mm bolts -C- into cylinder block to guide sealing flange -B-.
- Screw hexagon nut -D- along threaded spindle, by hand, until it contacts the assembly bell housing -A-.



- -> Tighten assembly device hexagon nut with torque wrench V.A.G 1331 and open ring spanner insert V.A.G 1332/11.
  Tightening torque: 40 Nm

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

- Check installation position of sender wheel on crankshaft again => Page 39 .

If dimension -a- is too small again:

- Tighten hexagon nut to
  45 Nm.
- Check installation position of sender wheel on crankshaft again => Page 39 .

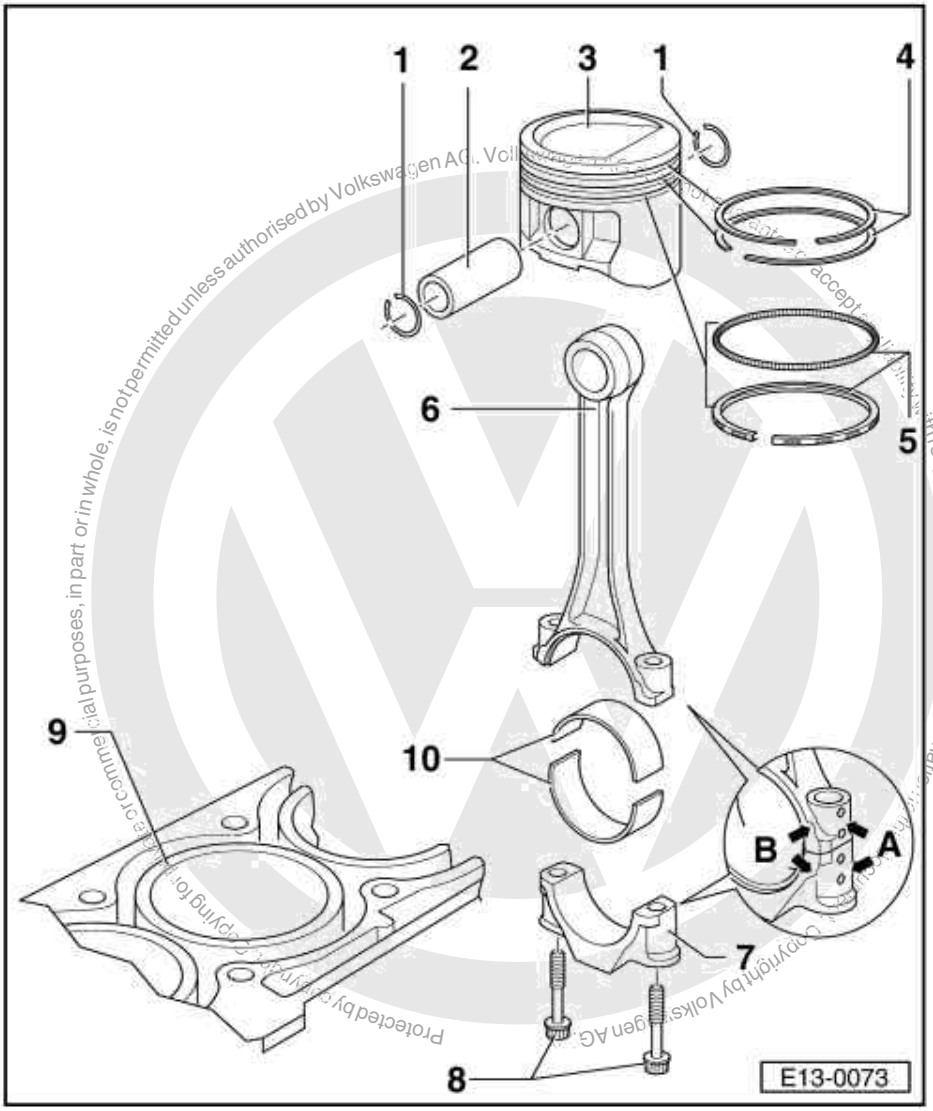
2.5 - Crankshaft dimensions

Honing dimension in mm	Conrod journal ø
Basic dimension	-0.022 47.80 -0.037
1st undersize	-0.022 47.55 -0.037
2nd undersize	-0.022 47.30 -0.037
3rd undersize	-0.022 47.05 -0.037

Protected by copyright. Copying for private or commercial purposes, in part, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

3 - Dismantling and assembling pistons and conrods

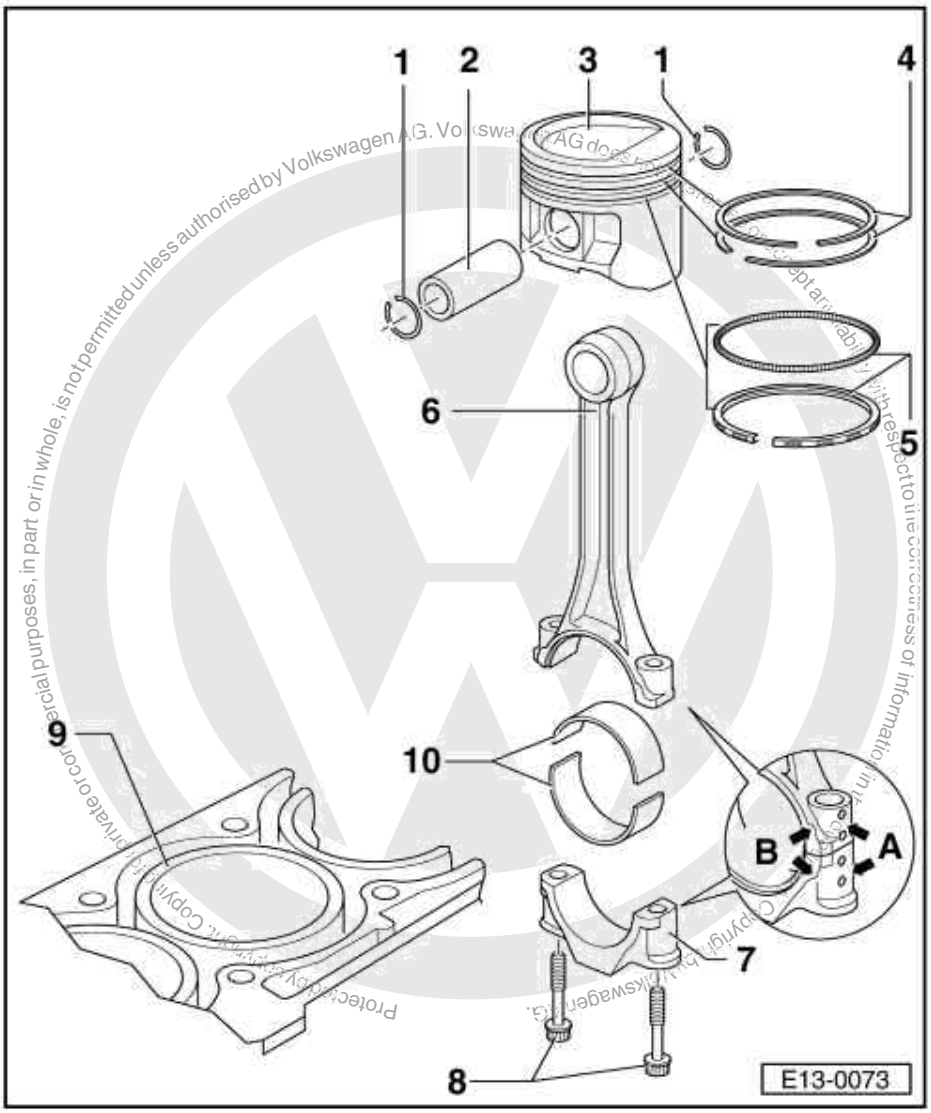
3.1 - Dismantling and assembling pistons and conrods



1 Circlip
2 Piston pin
- If difficult to remove, heat piston to 60 °C
- Remove and install with 10-14

3 Piston
- Checking => Fig. 3
- Mark installation position and cylinder number
- Arrow on piston crown points to pulley end
- Install using piston ring clamp

satelettronica

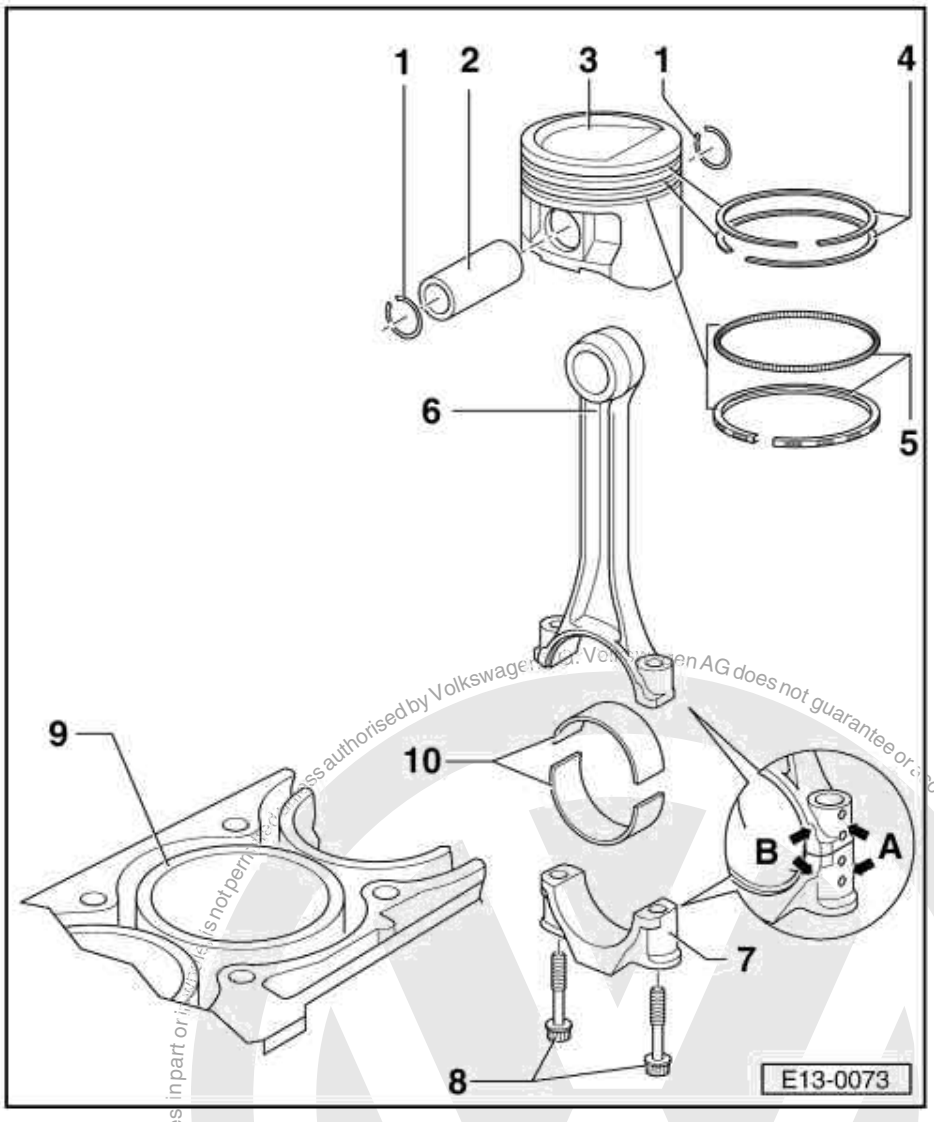


4 Compression rings
- Offset gaps by 120 °
- Remove and install compression rings with piston ring pliers
- "TOP" faces towards piston crown
- Checking ring gap=> Fig. 1
- Checking ring to groove clearance
  => Fig. 2

5 Oil scraper ring
- Remove and install spiral-type expander carefully by hand
- "TOP" faces towards piston crown
- Checking ring gap=> Fig. 1
- Checking ring to groove clearance
  => Fig. 2

6 Conrod
- Only renew as a set
- Mark cylinder number -A-
- Installation position:
  Marking -B- faces towards pulley end
- Guided axially via piston

satelettronica



7 Conrod bearing cap
- The caps only fit in one position and only on the appropriate con-rod, this is due to the breaking procedure (cracking) separating the cap from the con-rod

8 Conrod bolt, 20 Nm + 1/4 turn (90 °) further
- Renew
- Oil threads and contact surface
- To measure radial clearance tighten to 20 Nm but not further

9 Cylinder block
- Checking cylinder bores
  =>Fig. 4
- Piston and cylinder dimensions
  =>Page 48

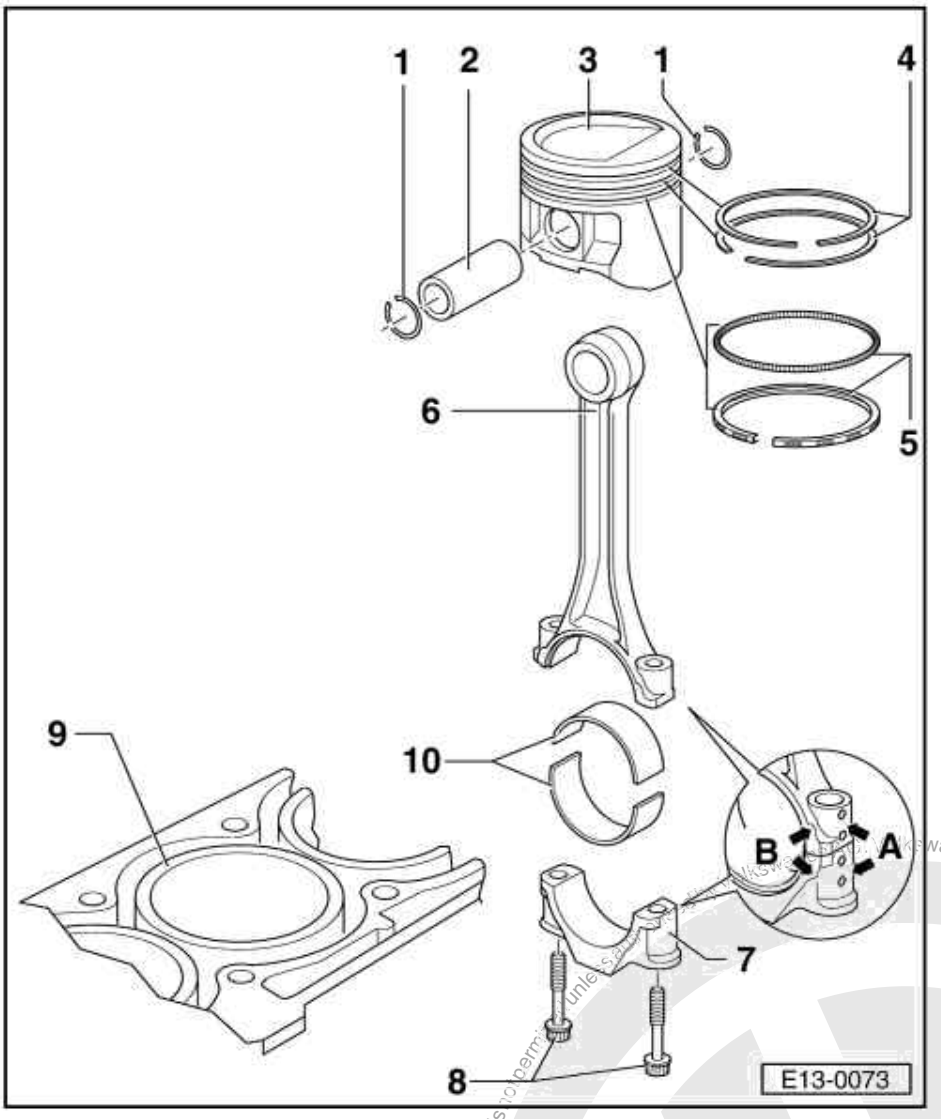
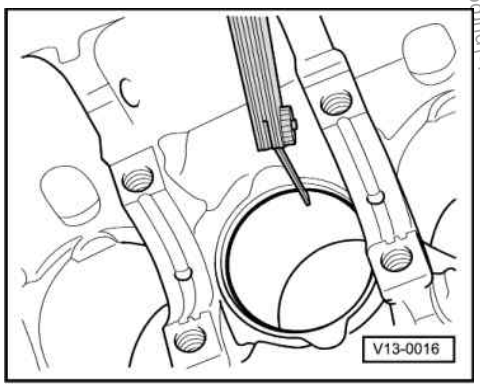
satelettronica



10 Bearing shell

- Do not interchange used bearing shells
- Insert bearing shells centrally
- Check radial clearance with Plastigage:
  New: 0.020...0.061 mm
  Wear limit: 0.091 mm
  Do not rotate crankshaft when checking radial clearance

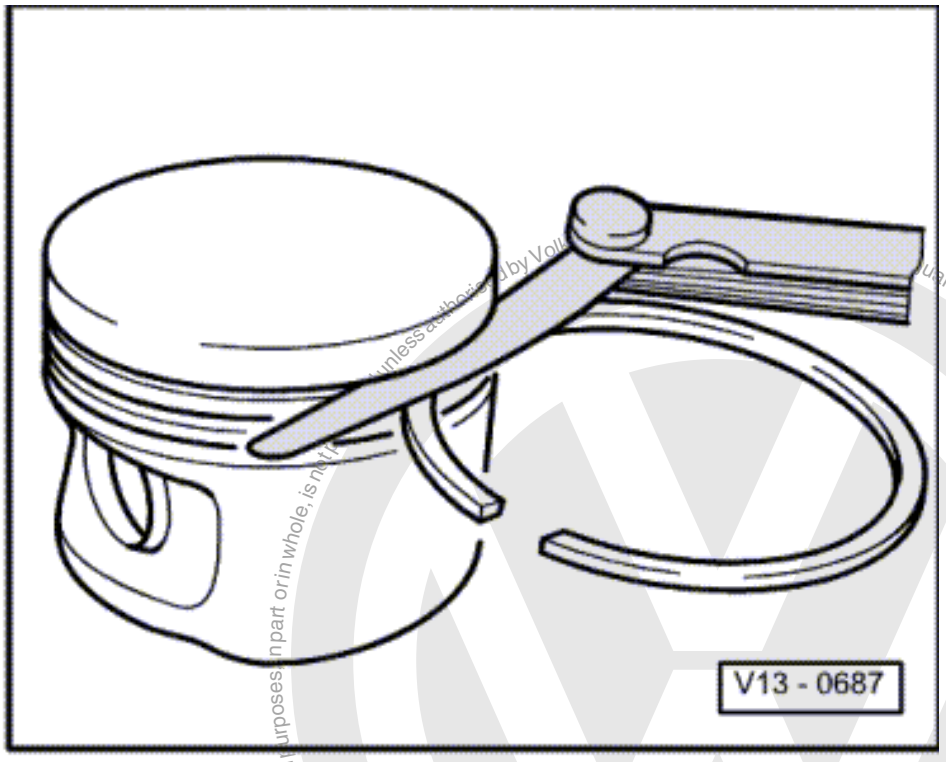


Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

-> Fig. 1 Checking piston ring gap

- Push ring squarely from above down to approx. 15 mm from bottom end of cylinder.

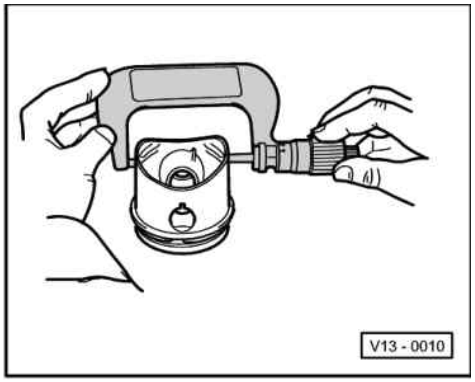
Piston ring	Wear limit
Compression rings	1.0 mm
Oil scraper ring	1.0 mm



-> Fig. 2 Checking ring to groove clearance

Clean groove before check.

Piston ring	Wear limit
Compression rings	0.15 mm
Oil scraper ring	0.15 mm



satelettronica

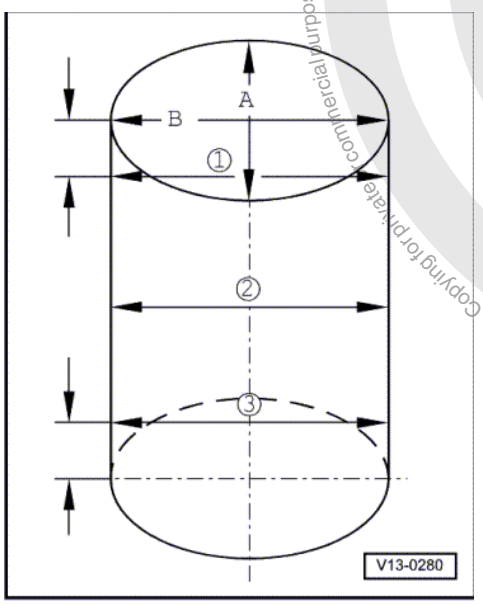
-> Fig. 3 Checking piston

Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- External micrometer 60...90 mm

- Approx. 10 mm from lower edge and offset 90 ° to piston pin axis. Deviations from nominal dimensions max. 0.04 mm

  Nominal dimension => Page 48 ; Piston and cylinder dimensions



-> Fig. 4 Checking cylinder bores

Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- Internal dial gauge 50...100 mm

- Take measurements at 3 positions in both lateral -A- and longitudinal -B- directions, as illustrated. Deviation from nominal dimension max. 0.08 mm

  Nominal dimension => Page 48 ; Piston and cylinder dimensions

Note:

Measuring the cylinder bores must not be done when the cylinder block is mounted on a repair stand with adapter bracket VW 540, as incorrect measurements would then be possible.

3.2 - Piston and cylinder dimensions

Honing dimension		Piston-ø	Cylinder bore-ø
Basic dimen.	mm	76.475	76.51
1st undersize	mm	76.725	76.76
2nd undersize	mm	76.975	77.01

satelettronica

15 - Cylinder head, Valve gear

1 - Removing and installing cylinder head

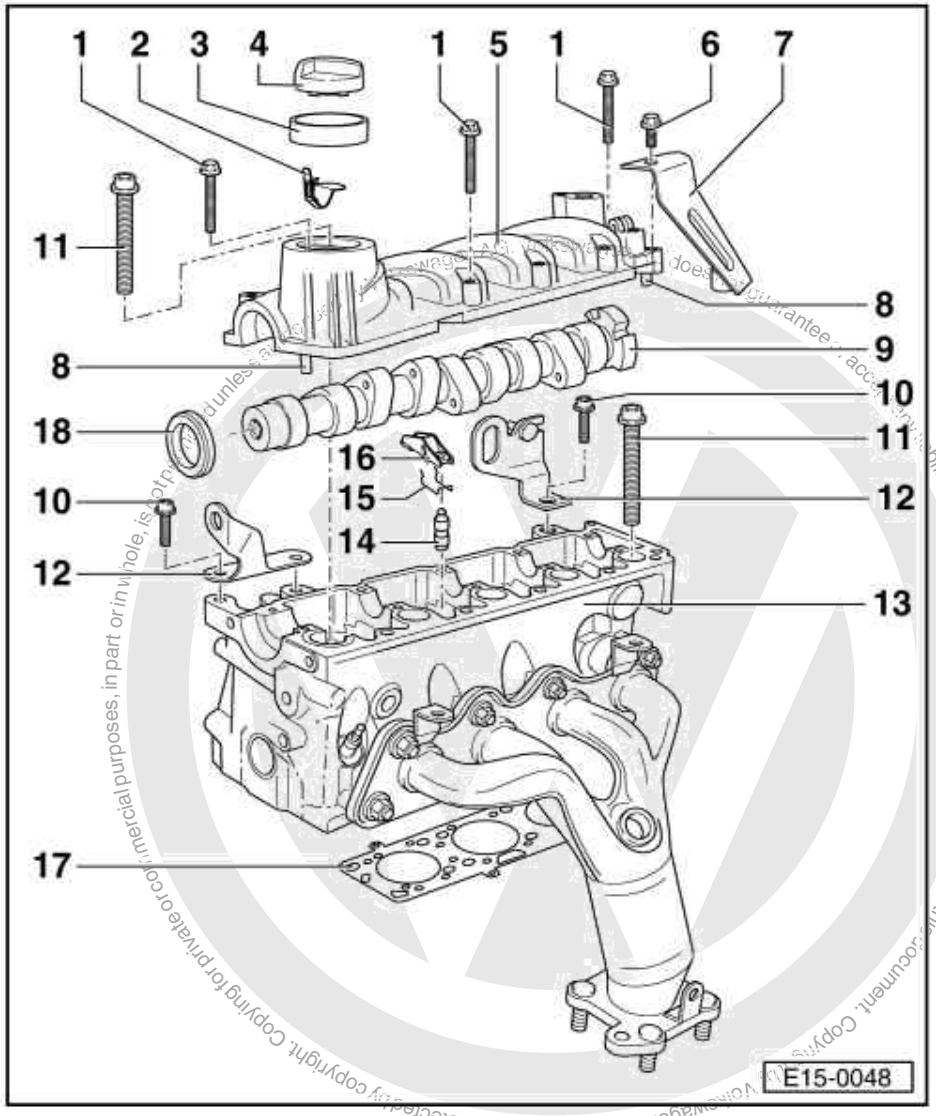
1.1 - Removing and installing cylinder head

Checking compressions=> Page 59

Notes:

- When installing an exchange cylinder head, all the contact surfaces between the support elements, roller rocker fingers and the cams must be oiled before installing the camshaft.
- The plastic packing pieces for protecting the open valves must not be removed until immediately before fitting cylinder head.
- If the cylinder head is replaced, all the coolant in the system must also be renewed.
- Removing and installing intake manifold:

=> Repair group 24; Servicing injection system; Removing and installing parts of injection system Servicing injection system Removing and installing parts of injection system



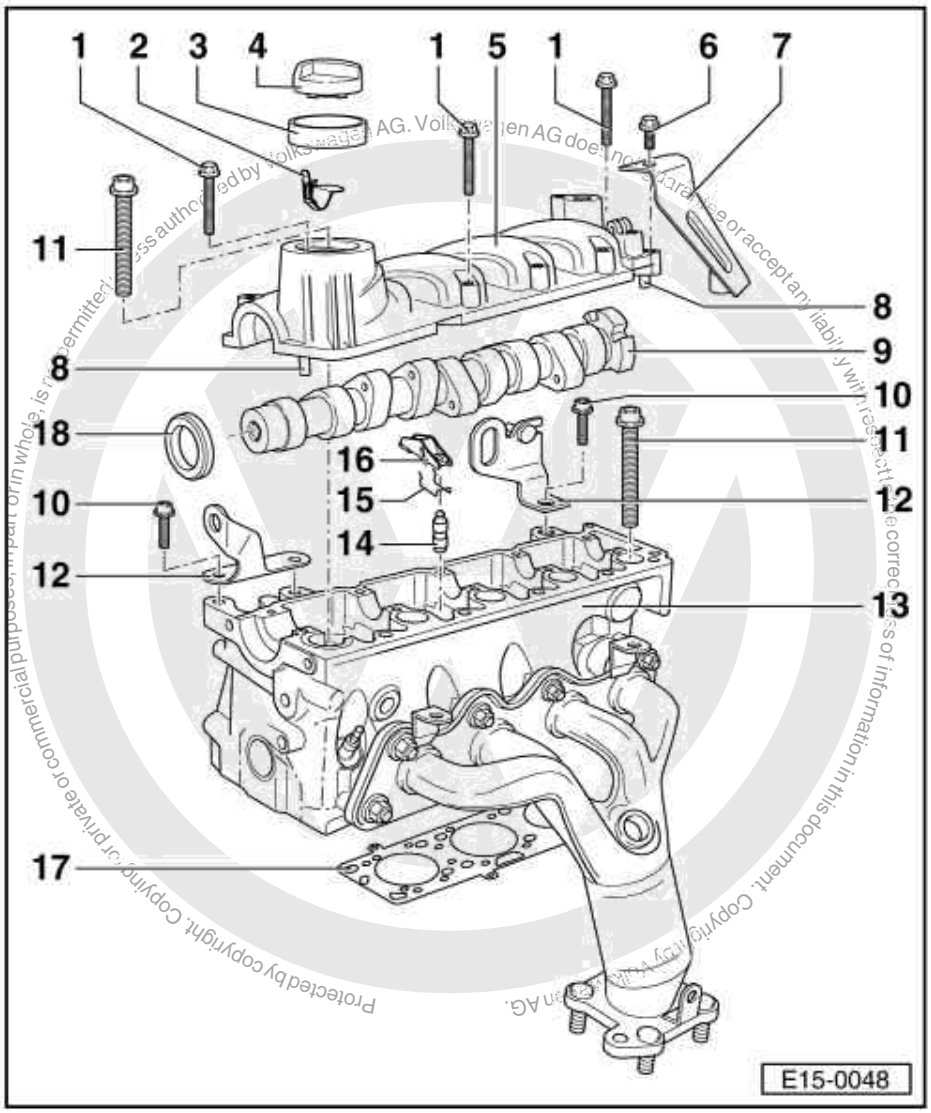
satelettronica

1 6 Nm + 1/4turn (90 °) further
- Renew
- Note installation instructions and sequence when loosening and tightening
  => Page 72

2 Screening cover
- Observe installation position
- Is clipped in or out

3 Boot
- Renew if damaged

4 Cap
- Renew seal if damaged



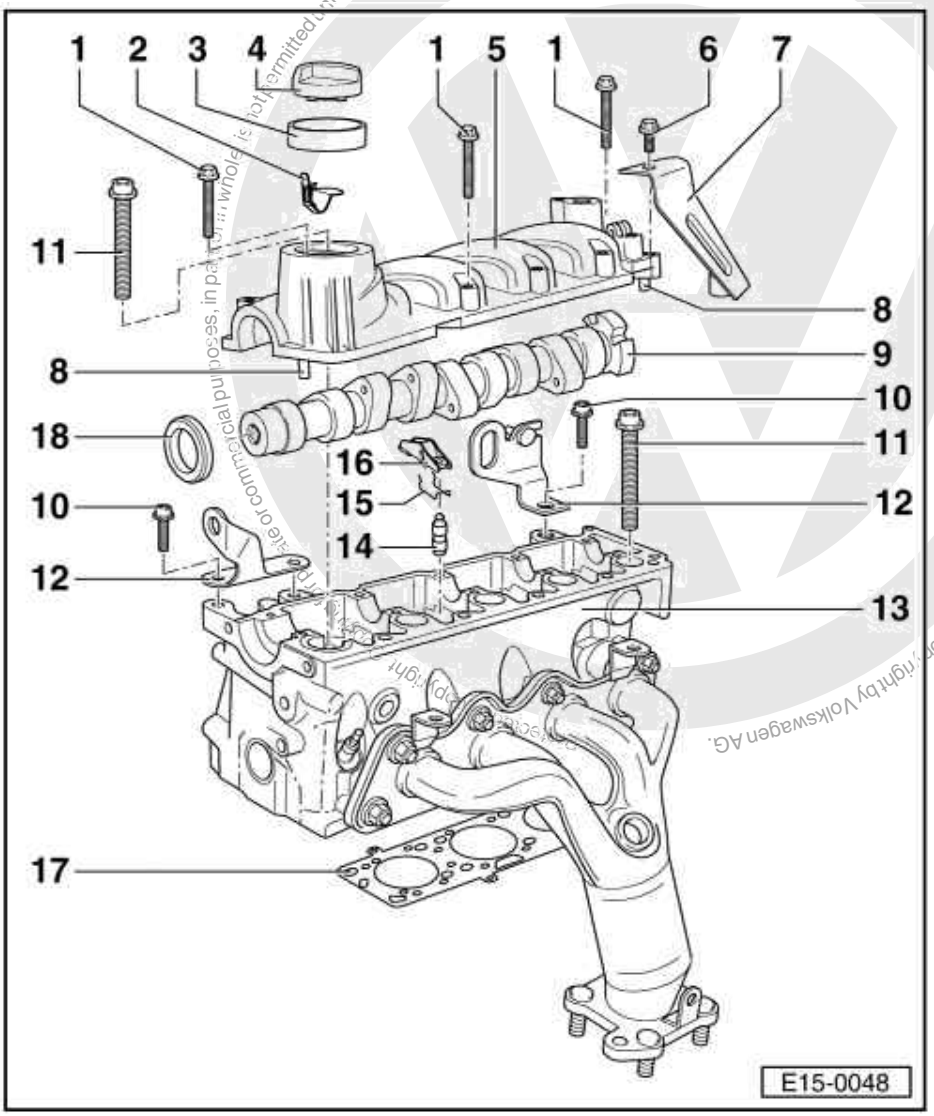
5 Cylinder head cover
- Sealing surface must not be treated
- With integrated camshaft bearings
- Removing and installing
  => Page 72
- Remove remnants of old sealant
- Coat with AMV 154 103 before fitting
- Install vertically from above with dowel pins in holes in cylinder head

6 10 Nm

7 Bracket
- For wiring harness

satelettronica

8 Fitted pin



9 Camshaft
- => Page 61 , Servicing valve gear
- Removing and installing
  => Page 72

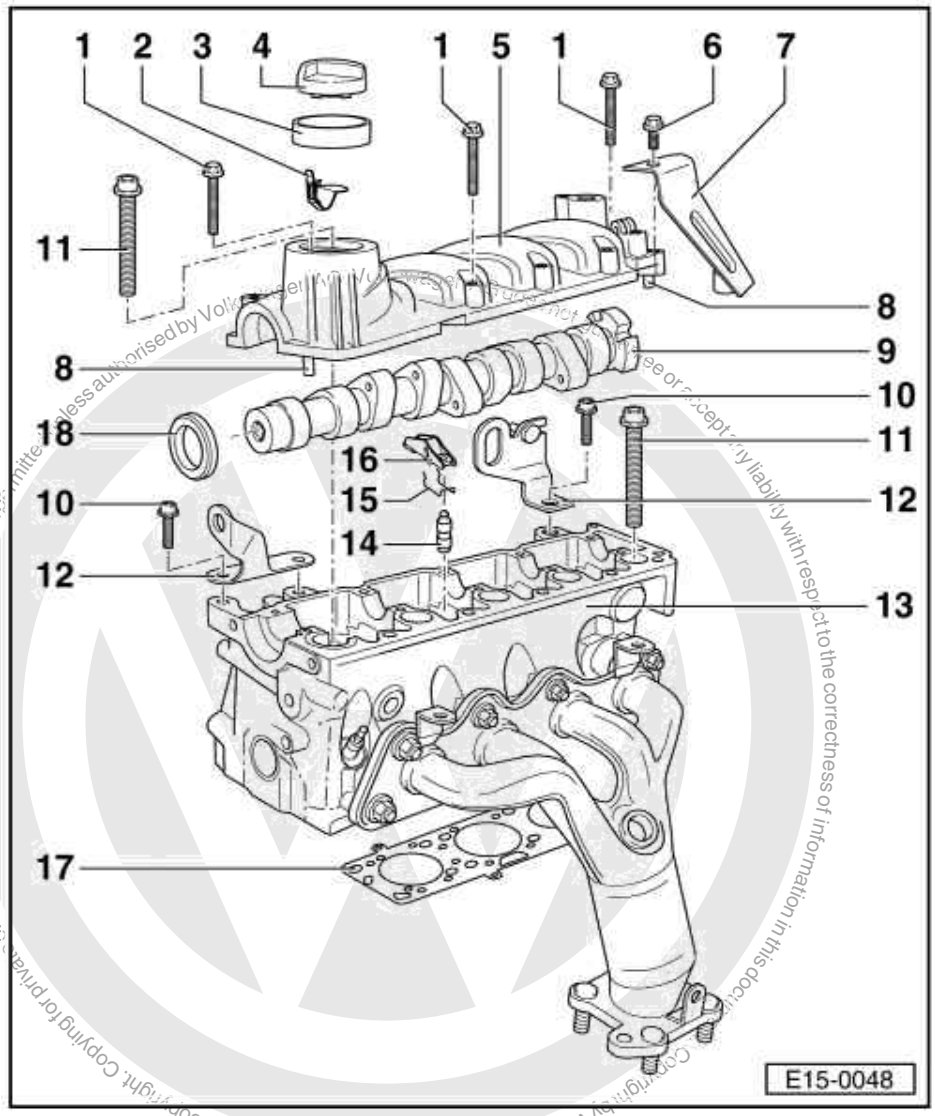
10 20 Nm

11 Cylinder head bolt
- Renew
- Note installation instructions and sequence when loosening and tightening
  => Page 55

12 Lifting eye

13 Cylinder head
- Check for distortion => Fig. 1
- Reworking of sealing surface on camshaft side not permissible
- Removing and installing
  => Page 55
- After replacing renew the complete coolant

Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica



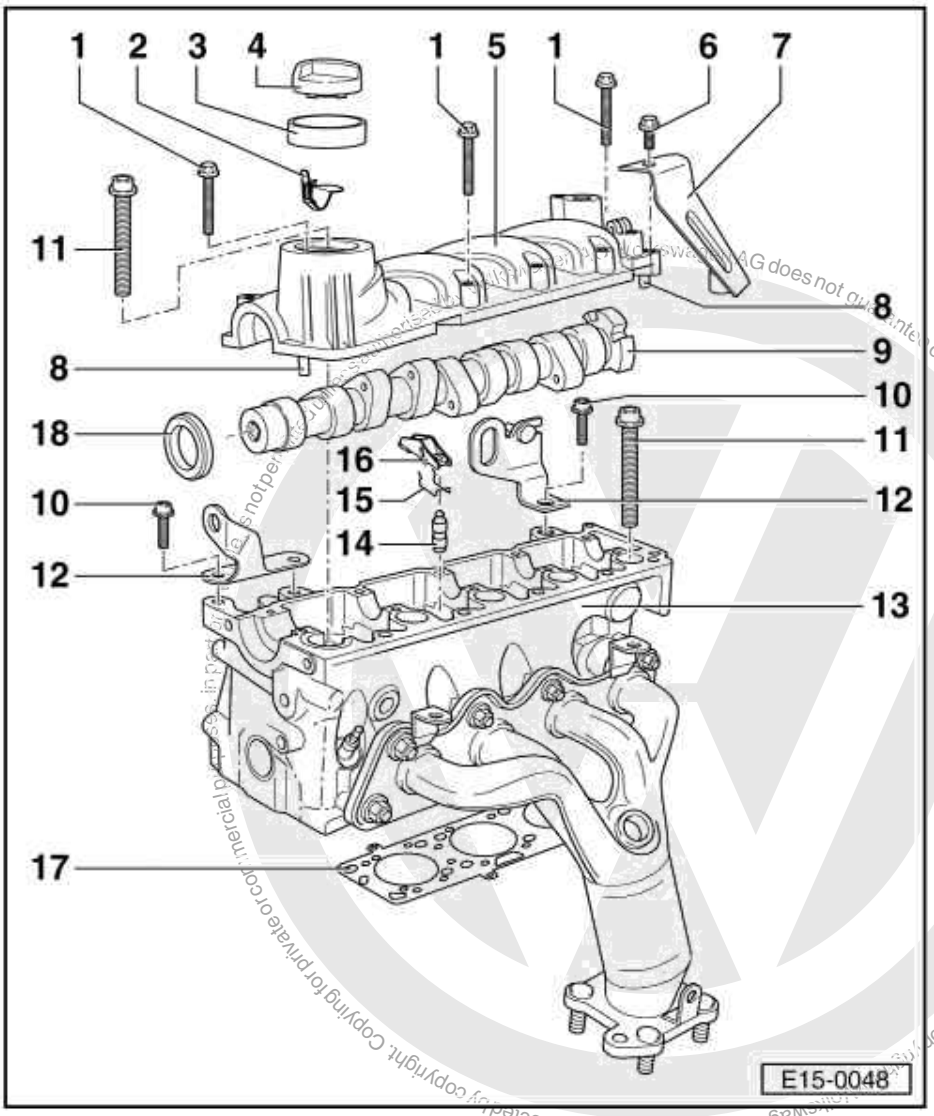
14 Support element
- Do not interchange
- With hydraulic valve clearance compensation
- Oil contact surface
- Before installing, check camshaft axial clearance =>Page 66 , Fig. 2

15 Retaining clip

16 Roller rocker finger
- Check bearing for ease of movement
- Oil contact surface
- Use securing clip to clip onto support element when installing

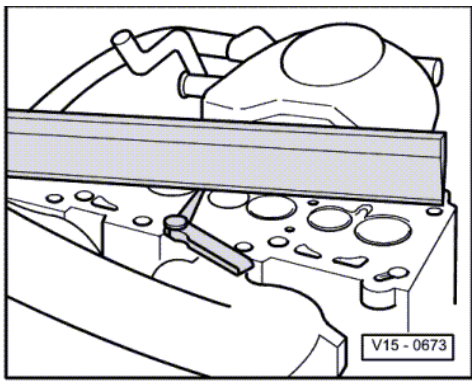
17 Cylinder head gasket
- Metal gasket
- Renew
- If replaced renew the complete coolant

satelettronica



18 Oil seal

- Lightly oil sealing lip of oil seal
- Renew=> Page 70

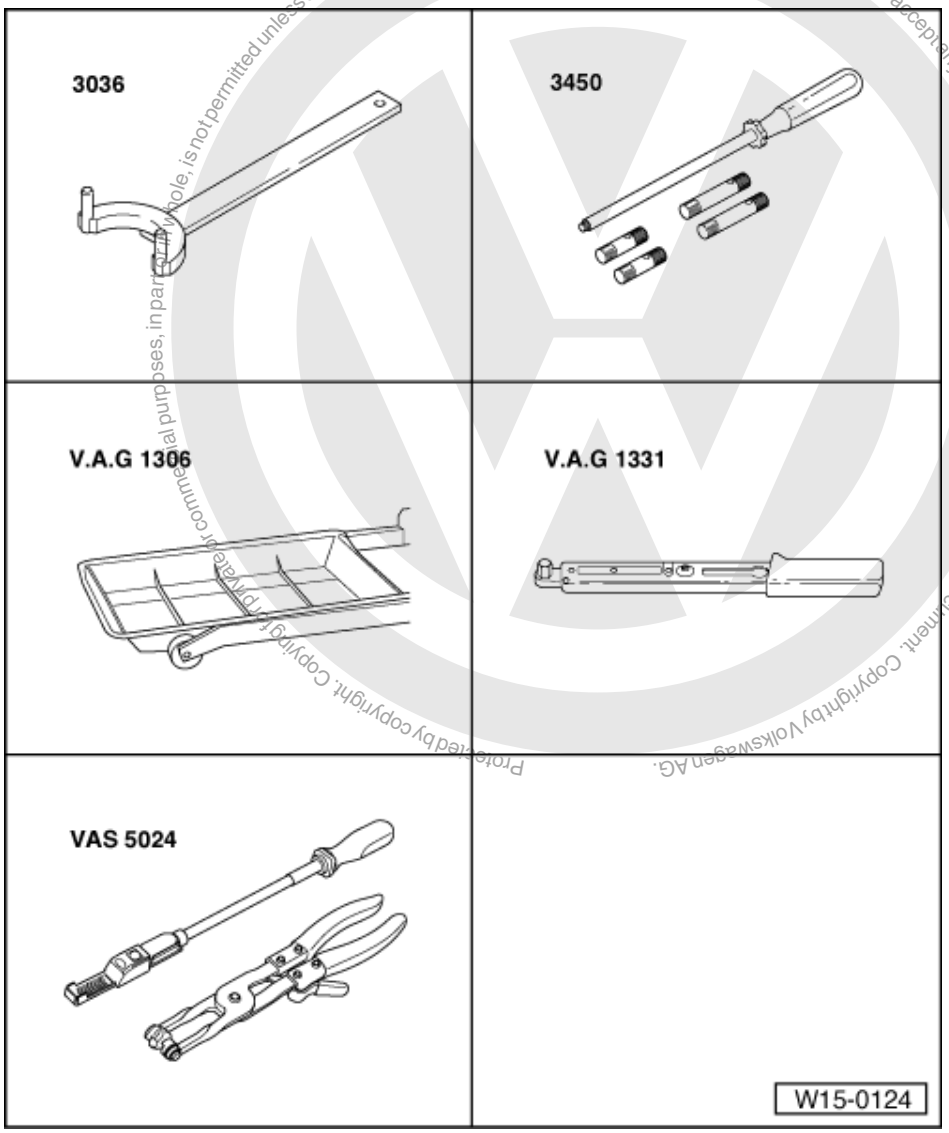


-> Fig. 1 Checking cylinder head for distortion

Max. permissible distortion: 0.05 mm

satelettronica

1.2 - Removing and installing cylinder head



Special tools, workshop equipment, test and measuring appliances and auxiliary items required

- 3036 Counter hold tool
- 3450 Guide pin
- V.A.G 1306 Drip tray
- V.A.G 1331 Torque wrench (5...50 Nm)
- VAS 5024 Assembly tool for spring-type clip

Prerequisites

- The engine must be no more than warm to touch.

Notes:

- When repairing an engine where it is not necessary to dismantle the cylinder head, the cylinder head can be removed without removing cylinder head cover or camshaft.
- Then start with work sequence 1.

If the cylinder head is to be dismantled
=> Work sequence 2 on Page 56 .

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

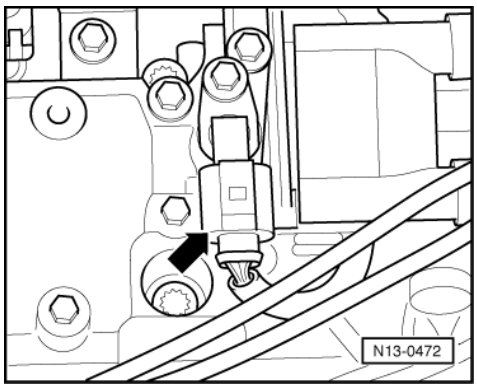
Work sequence

- First check whether a coded radio is fitted. If this is the case obtain the anti-theft coding.
- With the ignition switched off disconnect the battery earth strap.
- Remove air cleaner:

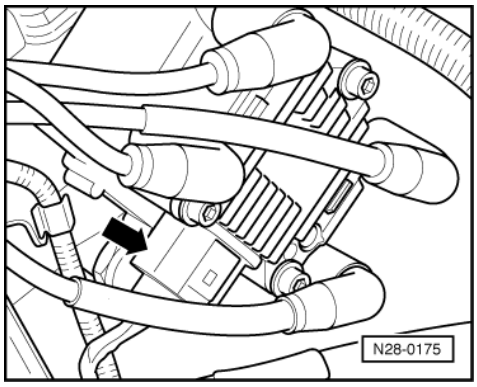
=> Repair group 24; Servicing injection; Dismantling and assembling air cleaner Servicing injection Dismantling and assembling air cleaner

- Loosen toothed belt tensioning roller and remove toothed belt from camshaft sprocket. Description of work => Page 24 , Removing, installing and tensioning toothed belt.

- Remove camshaft sprocket. When loosening camshaft sprocket bolt counter-hold with 3036.



- Unscrew top 3 bolts from rear toothed belt guard.
- Open cylinder head cover sealing cap, unclip the screening cover and take it out.
- -> Pull 3-pin connector off Hall sender -arrow-.



- -> Pull 4 pin connector off ignition transformer -arrow-.

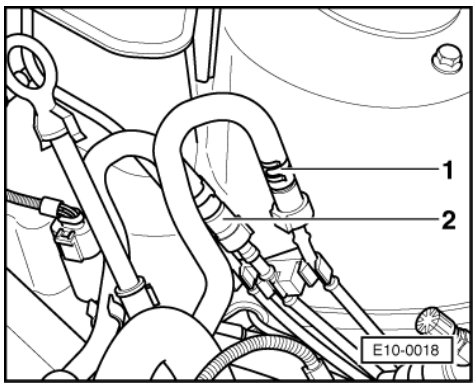
Work sequence 2

- Remove cylinder head cover and camshaft => Page 72 .

Work sequence 1 and 2

Warning!
Fuel supply lines are under pressure! Before removing from hose connection wrap a cloth around the connection. Then release pressure by carefully pulling hose off connection.

Protected by copyright. Copying for private or commercial purposes, in part or whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

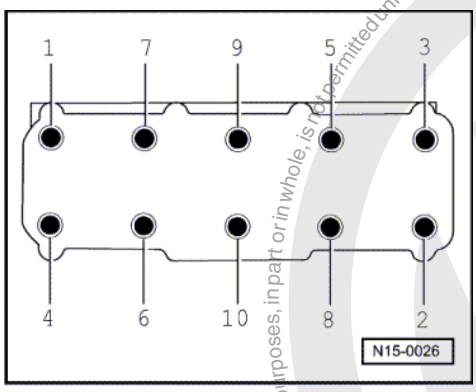


- Separate fuel supply -1- and fuel return pipe -2- at connecting points on suspension strut turret (press release button).
- Seal the pipes so that the fuel system is not contaminated by dirt etc.
- Loosen or separate the following components:
  - The connector from coolant temperature sender and oil pressure switch
  - The collective connectors below thermostat housing
  - The engine speed sender connector
  - Lambda probe connector in exhaust manifold
  - Connector on knock sensor
  - Oil pressure switch connector

- Remove fuel rail with all injectors from cylinder head.

=> Repair group 24; Servicing injection system; Dismantling and assembling fuel rail with injectors Servicing injection system Dismantling and assembling fuel rail with injectors

- Drain coolant => Page 103 .
- Pull the clamps which secure the coolant pipe to coolant pump off the thermostat housing.
- Remove thermostat housing from cylinder head.
- Disconnect all other inter-connecting, coolant, vacuum and intake hoses from cylinder head.
- Remove front exhaust pipe from exhaust manifold.
- Unscrew dipstick guide tube from intake manifold (max. screw rotation speed 350 rpm; 6 Nm).
- Remove lifting eye in area of oil filler hole.



- -> Loosen socket head bolts in the sequence given and then remove completely.
- Carefully lift cylinder head off.

Installing

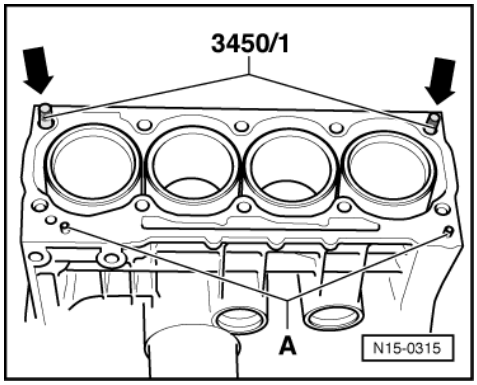
Notes:

- Only remove the new cylinder head gasket from its packing immediately before installing.
- Handle the new gasket with extreme care. Damaging will lead to leaks.

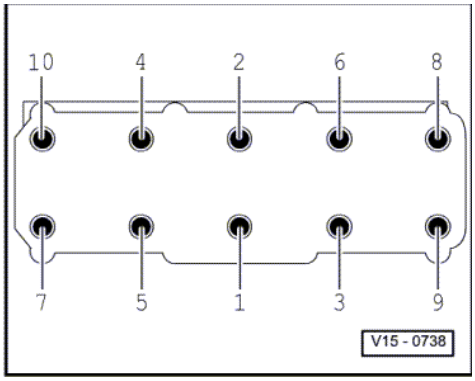
- Place a clean cloth in cylinders so that no dirt or emery cloth particles can get in between cylinder wall and piston.
- Also prevent dirt and emery cloth particles from getting into the coolant.
- Carefully clean cylinder head and cylinder block sealing surfaces. Thereby ensuring that no scoring or scratches are formed (when using abrasive paper the grade must not be less than 100).

satelettronica

- Carefully remove metal particles, emery remains and cloths.
- Set No. 1 cylinder piston to top dead centre and then turn crankshaft back slightly.



- -> To centralize cylinder head, screw guide pins from 3450/1 into holes for rear outer cylinder head bolts - arrows-.
- Place new cylinder head gasket on centralizing pins -A-. Lettering (Part No.) must be readable.
- Fit cylinder head, screw in 8 remaining cylinder head bolts and tighten by hand.
- Unscrew guide pins through bolt holes using pin driver from 3450. To do this turn pin driver anti-clockwise until the pins are free.
- Fit remaining cylinder head bolts and tighten hand-tight.



- -> Tighten cylinder head in tightening sequence as follows:
- Tighten all bolts to 30 Nm.
- Then tighten all bolts a 1/4 turn (90 °) further using a rigid wrench.
- Then tighten all bolts again a 1/4 turn (90 °) further.

The rest of the assembly is basically a reverse of the dismantling sequence.

Note:

When the camshaft is turned, the crankshaft must not be at TDC. Danger of damage to valves or piston crowns.

- Install camshaft and cylinder head cover (if necessary) => Page 73 .
- Install toothed belt and set valve timing => Page 24 .
- Filling with coolant => Page 103
- Install air cleaner:

=> Repair group 24; Servicing injection system; Dismantling and assembling air cleaner. Servicing injection system Dismantling and assembling air cleaner.

- Perform the work sequence "Procedure after interrupting voltage supply".

=> Repair group 24; Engine control unit; Procedure after interrupting voltage supply. Engine control unit Procedure after interrupting voltage supply.

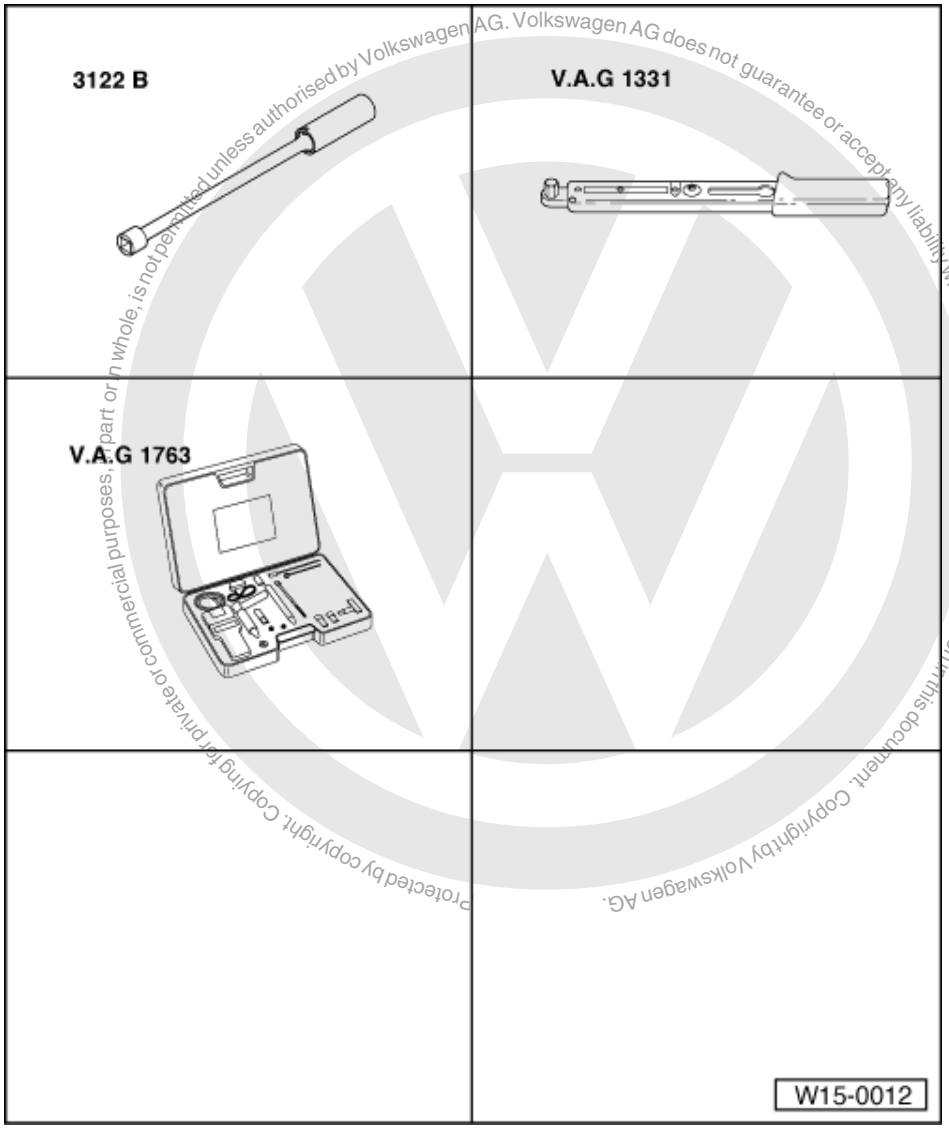
1.3 - Checking compression pressures



Protected by copyright. Copying for private or commercial purposes, part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

satelettronica

Special tools, workshop equipment, test and measuring appliances and auxiliary items required

- 3122 B Spark plug spanner
- V.A.G 1331 Torque wrench (5...50 Nm)
- V.A.G 1763 Compression tester

Test conditions

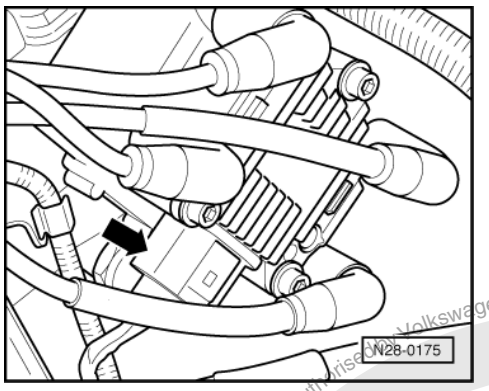
- Engine oil temperature must be at least 30 °C.

Work sequence

- Remove air cleaner:

=> Repair group 24; Servicing injection; Dismantling and assembling air cleaner Servicing injection Dismantling and assembling air cleaner

- Remove spark plugs with spark plug spanner 3122B.



- -> Pull 4 pin connector off ignition transformer -arrow-.
- Remove fuse 40 for fuel pump.
- Use a second mechanic to depress the accelerator so that the throttle valve is fully open.
- Check compressions with compression tester V.A.G 1381 or V.A.G 1763.

Note:

See relevant test unit operating instructions for instructions on how to use test unit.

- Operate starter until tester shows no further pressure increase.

Compression pressure:

New: 10...15 bar
Wear limit: 7 bar

Permissible difference between all cylinders: 3 bar

- Insert spark plugs with spark plug spanner 3122B and tighten to 30 Nm.
- Interrogate fault memory:

=> Repair group 01; Fault memory; Interrogating and erasing fault memory Fault memory Interrogating and erasing fault memory

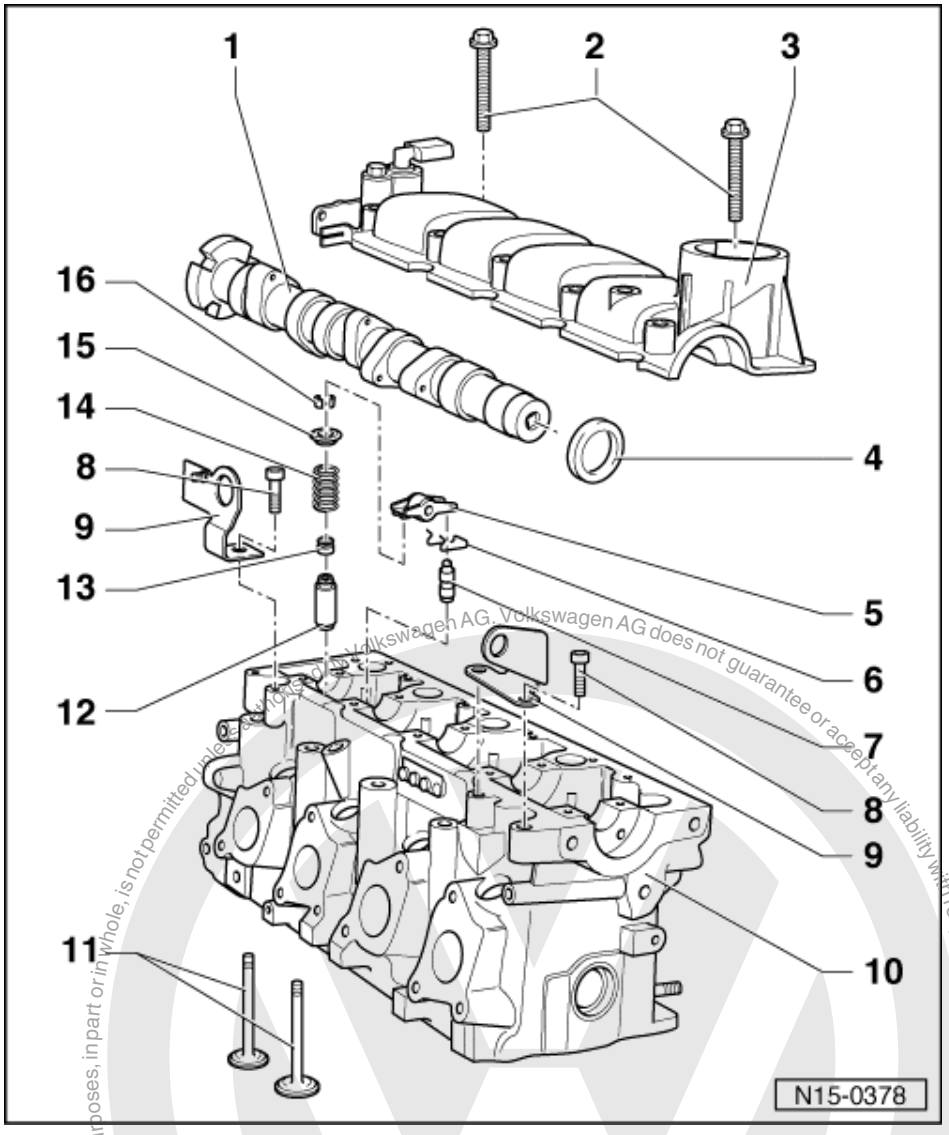
satelettronica

2 - Servicing valve gear

2.1 - Servicing valve gear



Note:

Cylinder heads which have cracks between the valve seats or between valve seat inserts and the spark plug thread can be used further without reducing service life, provided the cracks do not exceed a maximum of 0.5 mm in width, or when no more than the first turns of the spark plug thread are cracked.

1 Camshaft

- Checking axial clearance => Fig. 2
- Identification and valve timing => Fig. 3
- Removing and installing => Page 72
- Checking radial clearance with plastigage
  Wear limit: 0.1 mm
- Run-out: max. 0.05 mm

satelettronica

satelettronica

Engine codes	AKK, ANW
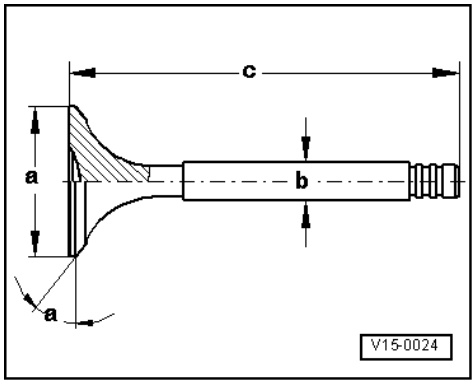
Exhaust opens BBDC	16.7°
Exhaust closes ATDC	9.3°



-> Fig. 4 Valve dimensions

Note:

Valves must not be reworked. Only lapping-in is permitted.

Engine codes AKK, ANW

Dimension		Inlet valve	Exhaust valve
øa	mm	33.5	28.0
øb	mm	5.973	5.953
c	mm	99.20	99.20
α	<°	45	45

2.2 - Reworking valve seats

Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- Depth gauge
- Valve seat refacing tool

Notes:

- When repairing engines with leaking valves, it is not sufficient to replace or renew valve seats and valves. It is also necessary to check the valve guides for wear. This particularly important on high mileage engines => Page 75 .
- The valve seats should only be reworked just enough to produce a perfect seating pattern. The maximum permissible reworking dimension must be calculated before work is carried out. If the reworking dimension is exceeded, the function of the hydraulic tappets can no longer be guaranteed and therefore the cylinder head should be renewed.

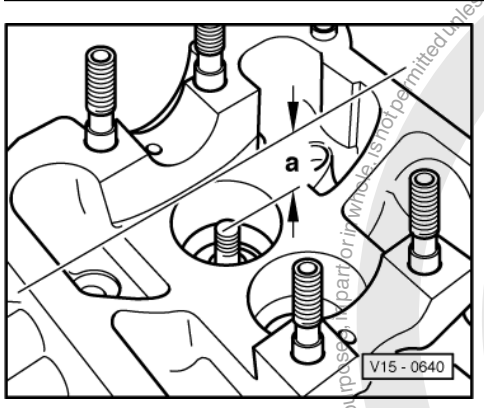
The max. permissible reworking dimension is calculated as follows:

- Insert valve and press firmly against seat.

Note:

If the valve is to be renewed as part of a repair, use a new valve for the calculation.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelitronica



- -> Measure distance -a- between end of valve stem and upper edge of cylinder head.
- Calculate max. permissible reworking dimension from measured distance and minimum dimension.

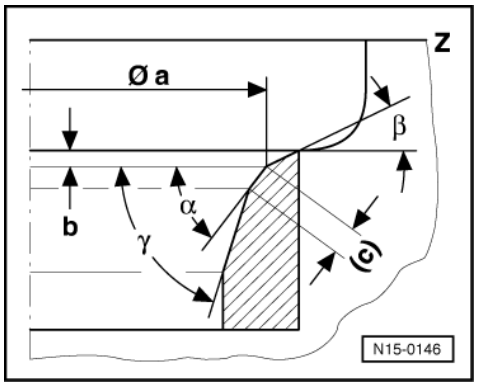
Minimum dimension:
Inlet valve and outlet valve 32.1 mm

Measured distance minus minimum dimension
= max. permissible reworking dimension.

Example:

- Measured gap	32.5	mm
Minimum dimension	32.1	mm
= Max. permissible reworking dimension*	0.4	mm

*) The max. permissible reworking dimension is shown on illustrations for reworking valve seats as dimension "b".



-> Reworking inlet valve seat

a = ø 31.9 mm
b = max. permissible reworking dimension*
c = 1.8 ... 2.0 mm
Z = Lower edge of cylinder head
α = 45°valve seat angle
β = 30°upper correction angle
γ = 60°lower correction angle

Note:

Valve seat rings having restrictor may only be reworked so far that the restrictor is not damaged.

satelettronica

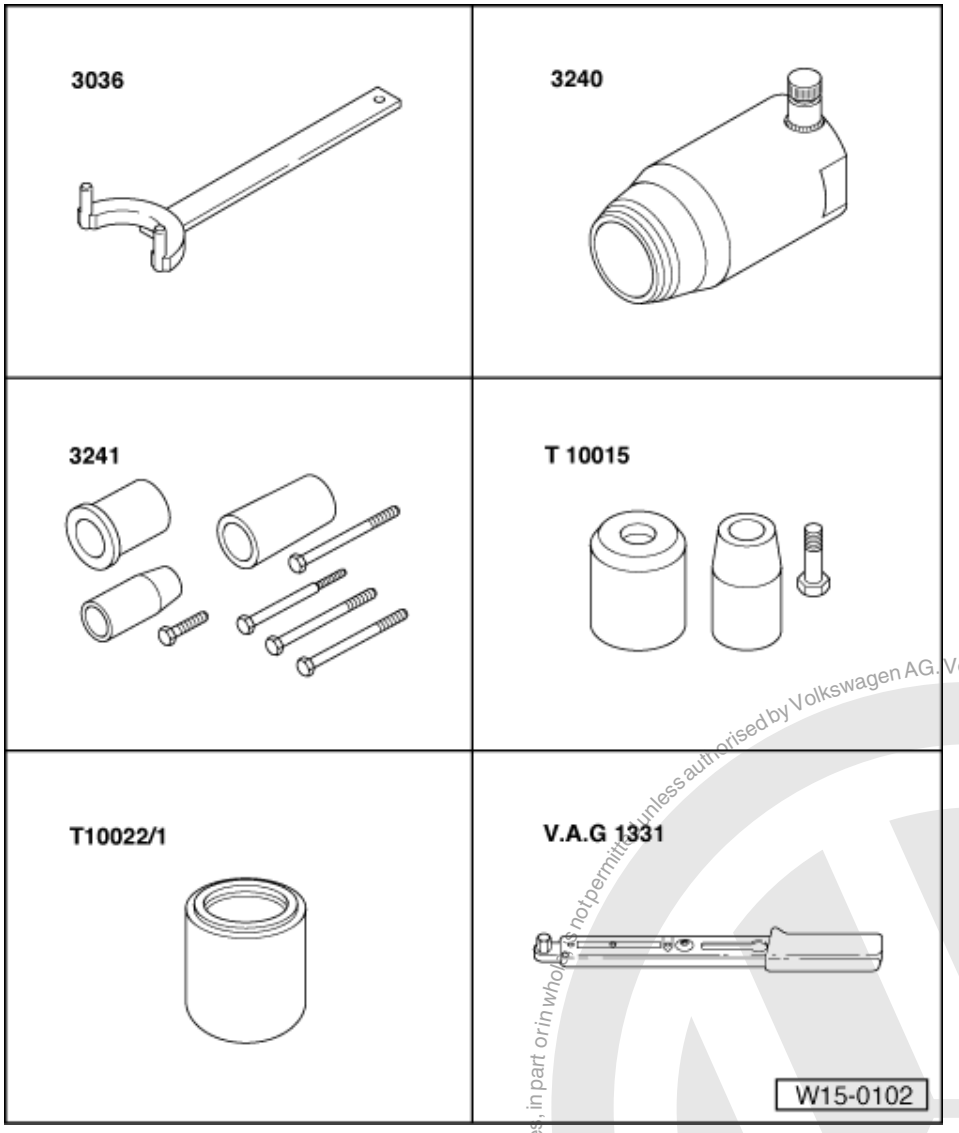
2.3 - Replacing camshaft oil seal



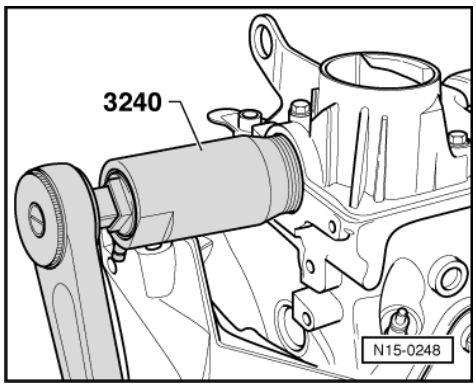
Special tools, workshop equipment, test and measuring appliances and auxiliary items required

- 3036 Counter hold tool
- 3240 Oil seal extractor
- 3241 Fitting sleeves
- T10015/3 Fitting sleeve bolt
- T10022/1 Press piece
- V.A.G 1331 Torque wrench (5...50 Nm)

Removing

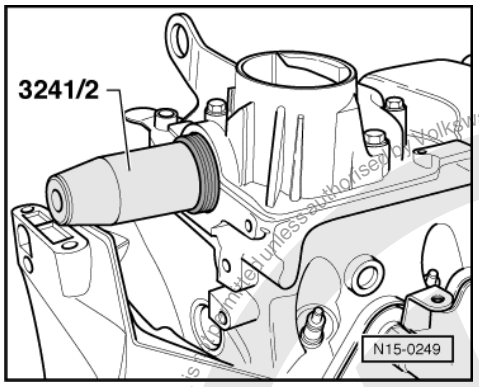
- Remove ribbed belt => Page 21 .
- Remove toothed belt => Page 24 .
- Turn crankshaft back slightly.
- Remove camshaft sprocket. When loosening camshaft sprocket bolt counter-hold with 3036.
- Remove toothed rear belt guard together with coolant pump =>Page 107 .
- Screw camshaft sprocket securing bolt into camshaft onto stop by hand, to guide seal extractor.

satelettronica
Protected by copyright. Copyright by Volkswagen AG. Copying for private or commercial purposes, in part or in whole is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document.



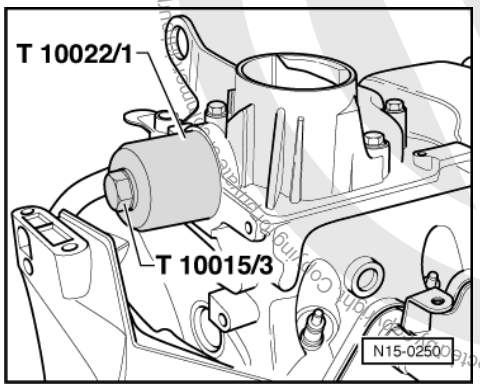
- Unscrew inner part of oil seal extractor 3240 two turns (approx. 3 mm) out of the outer part and lock with knurled screw.
- -> Lubricate threaded head of oil seal extractor, place it in position and exerting firm pressure screw it into oil seal as far as possible.
- Loosen knurled screw and turn inner part of extractor against camshaft until oil seal has been extracted.

- Remove camshaft sprocket securing screw.



Installing

- Lightly oil sealing lip of oil seal.
- -> Fit guide sleeve 3241/2 onto camshaft journal.
- Slide oil seal over guide sleeve.
- Remove guide sleeve.



- -> Press oil seal with press piece T10022/1 and bolt from T10015/3 in onto stop. Place washer between press sleeve and hexagon head bolt.
- Install camshaft sprocket and tighten new bolt (use counter-hold tool 3036).
  Tightening torque:
  20 Nm and 1/4turn (90 °) further.

satelettronica

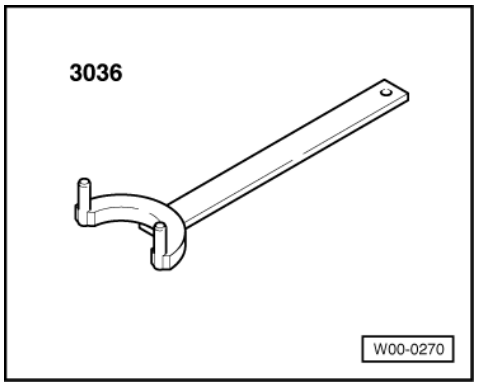
The rest of the assembly is basically a reverse of the dismantling sequence.

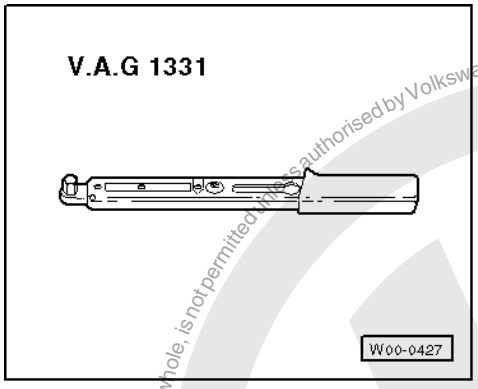
Installing toothed belt and adjusting timing => Page 24 .

2.4 - Removing and installing cylinder head cover and camshaft



Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- 3036 Counter-hold



- V.A.G 1331 Torque wrench (5...50 Nm)
- AMV 154 103 Sealant

Removing

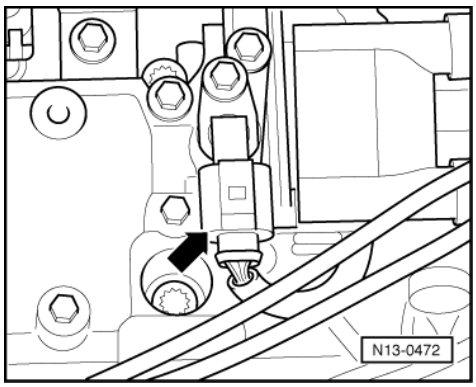
Notes:

- The sealing surfaces on cylinder head cover and cylinder head must not be reworked.
- In this cylinder head the camshaft bearings are integrated into the cylinder head and cylinder head cover. Before removing cylinder head cover, the toothed belt tension must be relieved.
- If the cylinder head cover has been loosened, replace camshaft oil seal.

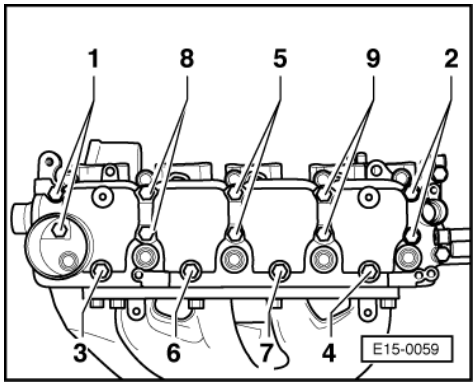
Work sequence

- First check whether a coded radio is fitted. If this is the case obtain the anti-theft coding.
- With the ignition switched off disconnect the battery earth strap.
- Loosen toothed belt tensioning roller and remove toothed belt from camshaft sprocket. Description of work => Page 24 , Removing, installing and tensioning toothed belt.
- Remove camshaft sprocket. When loosening camshaft sprocket bolt counter-hold with 3036.
- Unscrew top 3 bolts from rear toothed belt guard.
- Unscrew ignition transformer screws out of cylinder head cover.

Copyright by VW. Reproduction, even in part, is not permitted for commercial purposes or for private use without the express consent of Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document.
satelettronica



- -> Pull 3-pin connector off Hall sender -arrow-.
- Open cylinder head cover sealing cap and unclip screening cover and remove.



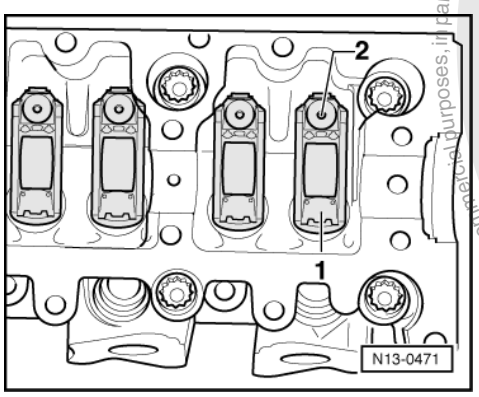
- -> Remove cylinder head cover bolts in the sequence prescribed and loosen items 8 and 9 using diagonally and alternating sequence.
- Carefully remove cylinder head cover.
- Lift camshaft carefully, remove and place on a clean surface.
- Remove roller rocker finger together with support elements and place on a clean surface.
- Ensure the roller rocker fingers and the support elements are not interchanged.

Installing

Prerequisites

- Prevent dirt and sealant remnants from entering cylinder head.
- Sealing surfaces must be free of oil and grease.
- When installing cylinder head cover or camshaft, the cams for Cyl. 1 must face upwards.
- The pistons must not be positioned at TDC.

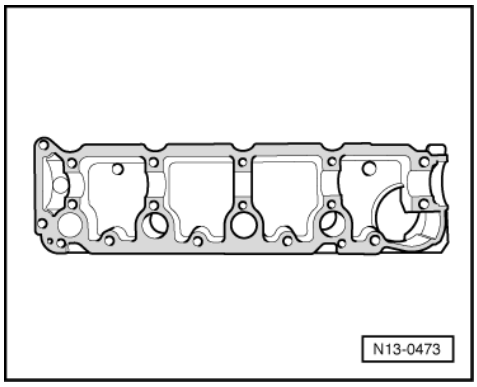
- Remove sealant remnants on cylinder head and camshaft housing with a commercially available sealant remover.



satelettronica
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

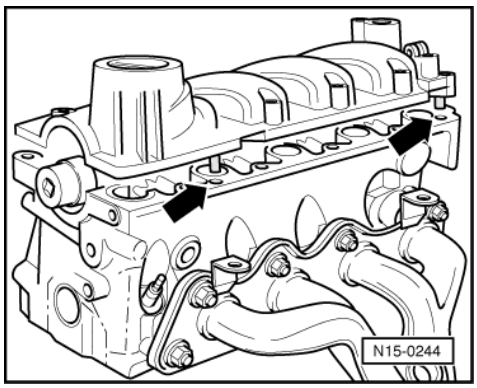
- Insert support element in cylinder head and fit roller rocker finger onto respective valve stem end and support element.
- -> Ensure all roller rocker fingers contact the valve ends -1- correctly and they are clipped into their respective support elements -2-.

- Oil the camshaft contact surfaces.



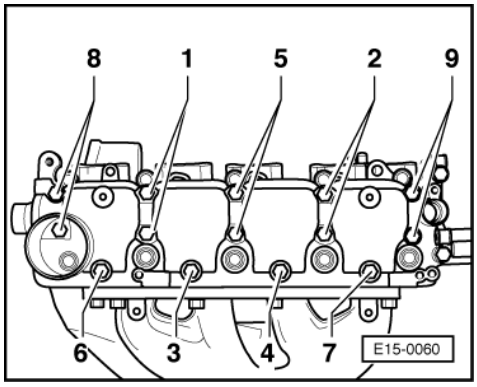
- Carefully place camshaft in camshaft bearing of cylinder head.
- -> Apply a thin even coat of sealant onto the clean cylinder head cover sealing surface. See shadowed area in diagram.

Note:
The sealant must not be applied too thick, otherwise excess sealant can enter the oil channels or camshaft bearing and cause damage to the engine.



- -> Install the cylinder head cover carefully from above ensuring that the dowel pins fit in holes -arrows- in the cylinder head.

Notes:
- Positioning and securing the cylinder head cover must be completed without interruption, as the sealing surfaces start to cure immediately they have contact.
- The cylinder head cover bolts must be replaced.



Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

- -> First tighten bolts items 1 and 2 alternately using diagonal sequence and tighten to 6 Nm.
- Then tighten the other bolts to 6 Nm in sequence prescribed.
- Then tighten all bolts a 1/4 turn (90 °) further.

Note:

Sealant must be left dry for approx. 30 minutes after installing cylinder head cover.

- Install new oil seal in camshaft,
  => Page 70 .

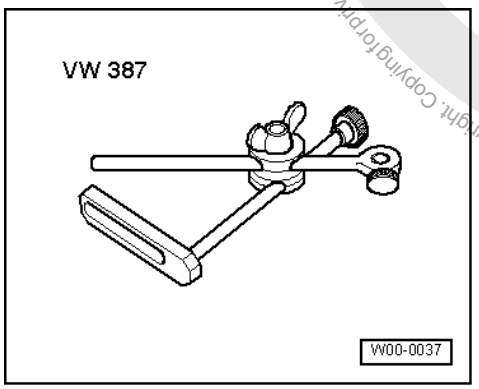
The rest of the assembly is basically a reverse of the dismantling sequence.

Installing toothed belt and adjusting timing => Page 24 .

- Perform the work sequence "Procedure after interrupting voltage supply".

=> Repair group 24; Engine control unit; Procedure after interrupting voltage supply. Engine control unit Procedure after interrupting voltage supply.

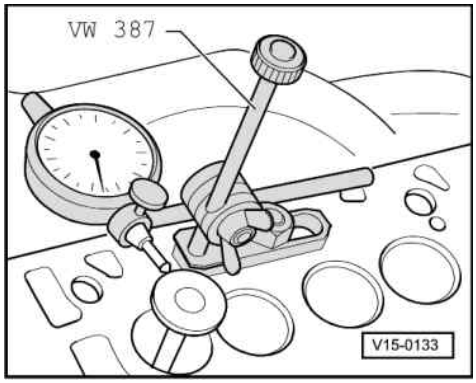
2.5 - Checking valve guides



Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- -> VW 387 Universal dial gauge bracket
- Dial gauge

Test sequence



- -> Insert new valve into guide until end of valve stem is flush with end of guide. Due to the slight difference in stem dimensions, ensure that only an inlet valve is used in the inlet guide and an exhaust valve in the exhaust guide.
- Determine rock.

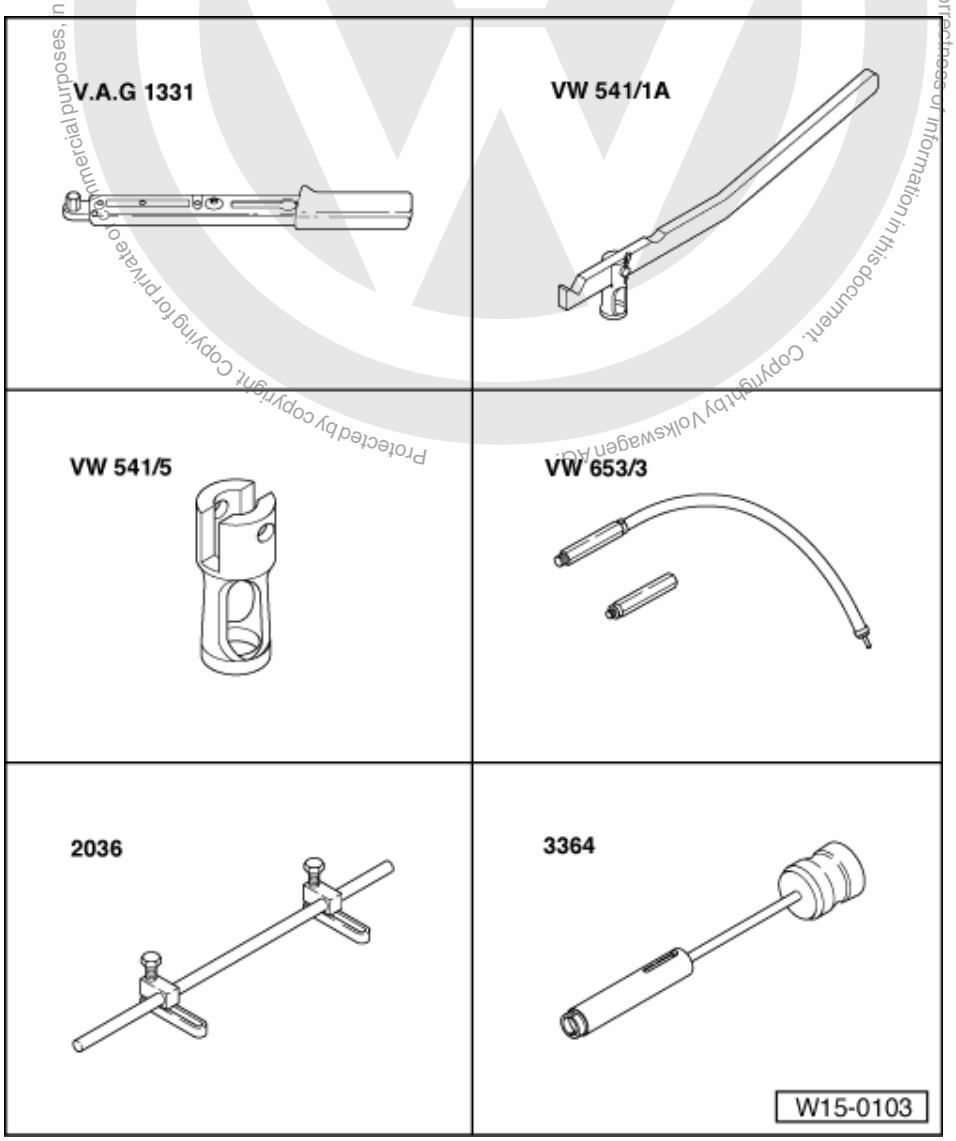
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

Wear limit: 0.8 mm

If rock is greater than 0.8 mm:

- Renew cylinder head.

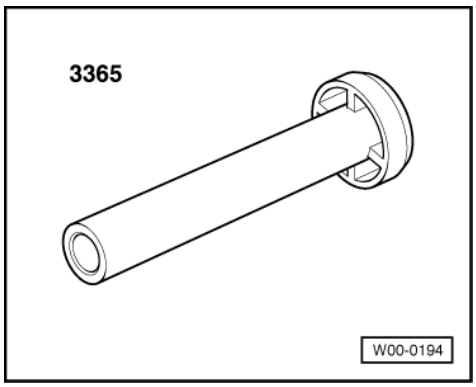
2.6 - Renewing valve stem seals



Special tools, workshop equipment, test and measuring appliances and auxiliary items required

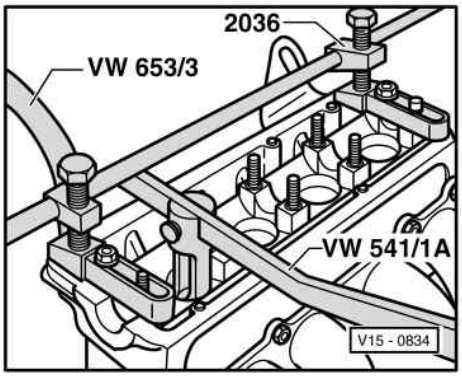
- V.A.G 1331 Torque wrench (5...50 Nm)
- VW 541/1A Valve lever
- VW 541/5 Thrust piece
- VW 653/3 Pressure hose
- 2036 Assembly appliance
- 3364 Puller

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica



- -> 3365 Press tool

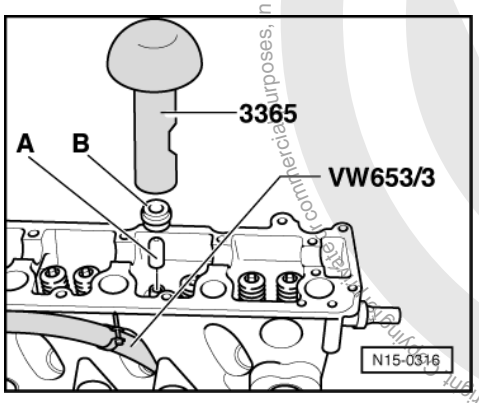
Removing
(with cylinder head fitted)
- Remove cylinder head cover and camshaft
  => Page 72 .
- Remove roller rocker finger together with support elements and place on a clean surface.
- Ensure the roller rocker fingers and the support elements are not interchanged.



- Remove spark plugs.
- Set piston of appropriate cylinder to "bottom dead centre".
- -> Fit assembly tool 2063 to cylinder head using old bolts from cylinder head cover.

- Screw pressure hose VW 653/3 into the spark plug thread.
- Connect pressure hose to a compressed air system of at least 6 bar.
- Remove valve springs with lever VW 541/1A and press piece VW 541/5.

Note:
Tight cotters can be loosened by tapping lightly on the lever.
- Pull off valve stem seals with 3364.



Protected by copyright. Copyright by Volkswagen AG.
Copy authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

Installing

- -> Place the plastic sleeve supplied -A- on the appropriate valve stem. This will prevent the new valve stem seal -B- being damaged.
- Insert new valve stem seal in fitting tool 3365.
- Oil valve stem seal sealing lip and press carefully onto the valve guide.

The rest of the assembly is basically a reverse of the dismantling sequence.

- Install cylinder head cover and camshaft => Page 72 .
- Install new camshaft oil seal =>Page 70 .

satelettronica

17 - Lubrication

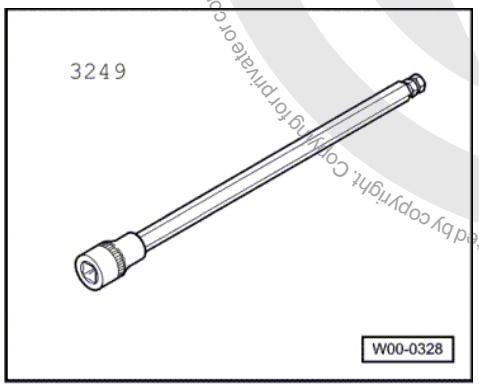
-> Fig. 1 Markings on oil dipstick

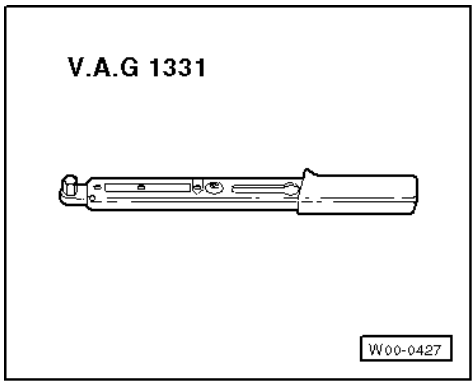
1 - max. mark
2 - min. mark
a - Area above hatched field up to max. mark: Do not replenish with engine oil!
b - Oil level within hatched field: can be replenished with engine oil
c - Area from min. mark up to hatched field: replenish with max. 0.5 ltr. of engine oil!

1.2 - Removing and installing oil sump



Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- -> 3249 Socket



- -> V.A.G 1331 Torque wrench (5...50 Nm)
- Hand drill with plastic brush
- Flat scraper
- Silicone sealant D176404 A2

Protected by copyright. Copying for private or commercial purposes, in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

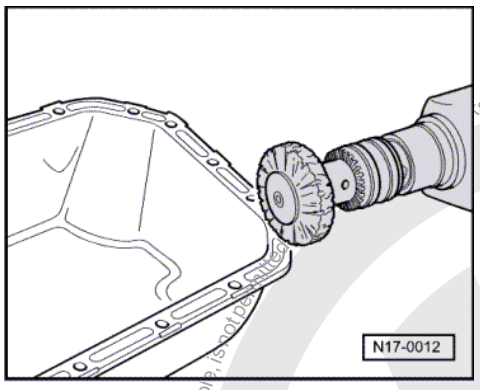
Work sequence

- Drain engine oil.
- Remove cable guide from the sump.
- Unbolt right-hand drive shaft at gearbox.

=> Running gear, axles, steering; Repair group 40; Servicing front suspension; Removing and installing drive shafts Servicing front suspension Removing and installing drive shafts

- Remove cover plate for flywheel.
- Unbolt sump sealed with liquid gasket.
- Remove sump, it may be necessary to release sump by tapping lightly with a rubber head hammer.

- Remove sealant residue on cylinder block with a flat scraper.

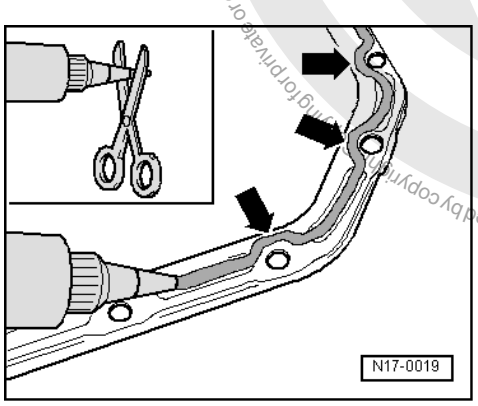


- -> Remove sealant residue on the sump with a rotating brush, e.g. a hand drill with a plastic brush (wear eye protection).
- Clean sealing surface, must be free of oil and grease.

Installing

Notes:

- Note the use by date of the sealant.
- Sump must be installed within 5 minutes of applying silicone sealing compound.
- The oil sump can be positioned easier and more securely if threaded studs are screwed in for guidance at two points on the cylinder block flange.



- -> Cut off tube nozzle at forward marking (nozzle approx. 3 mm ø).
- Apply silicone sealing compound, as shown, to clean sump sealing surface. Sealing compound bead must be.
  - 2...3 mm thick.
  - and run on inside of bolt holes -arrows-.

Protected by copyright. Copying for private or commercial purposes, in part or whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

Note:

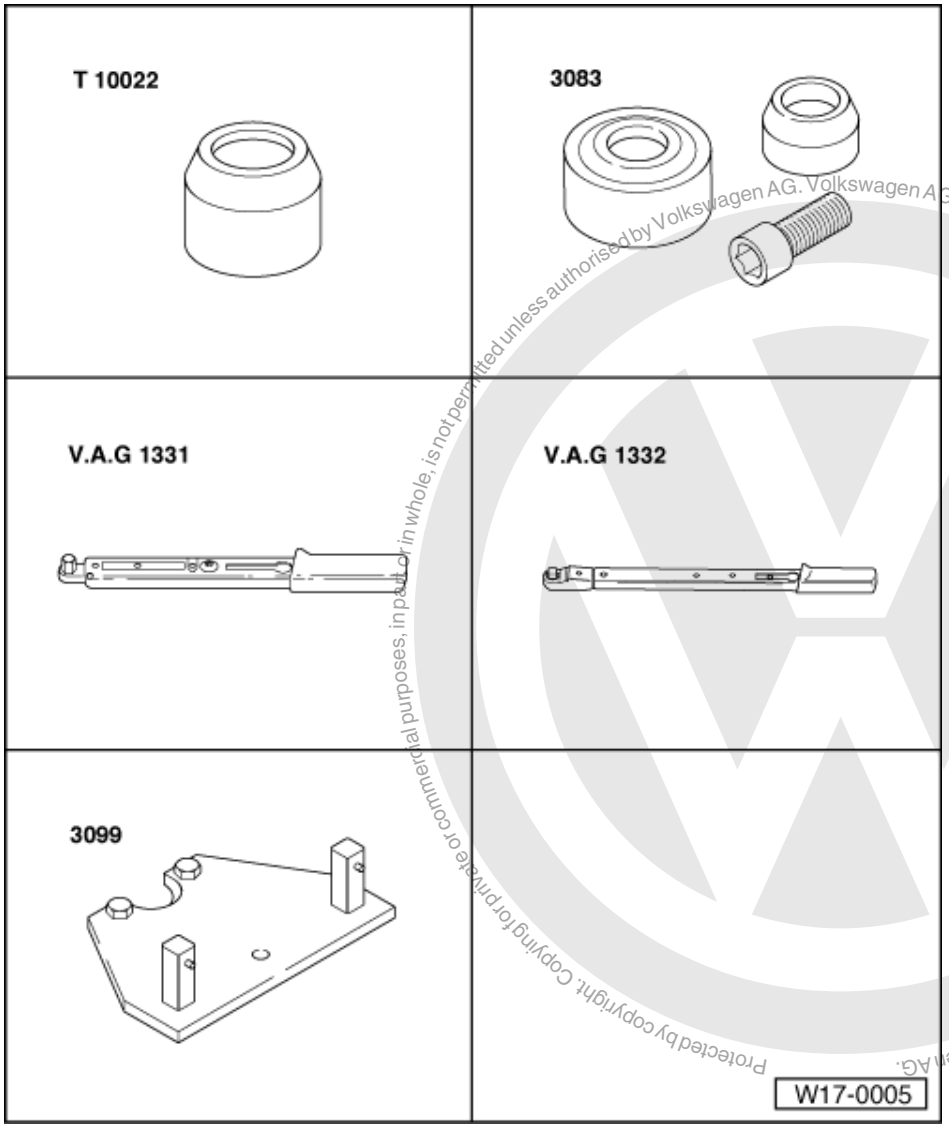
The sealing compound bead must not be thicker, otherwise excessive sealing compound will enter the sump and may block the oil suction pipe strainer.

- Install sump immediately and tighten all sump bolts lightly.
- Tighten sump bolts to
  15 Nm.

Note:

After installing sump the sealant must be allowed to dry for approx. 30 minutes before engine oil is replenished.

1.3 - Removing and installing oil pump

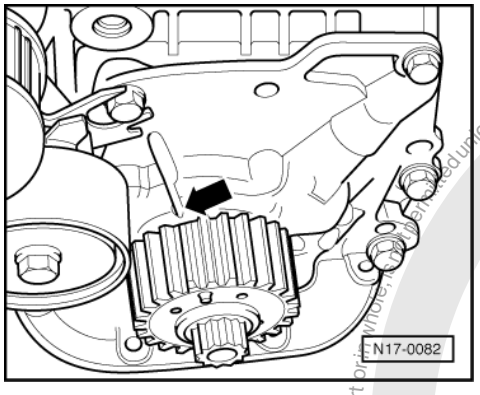


Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

Special tools, workshop equipment, test and measuring appliances and auxiliary items required

- T10022 Sleeve
- 3083 Oil seal fitting tool
- V.A.G 1331 Torque wrench (5...50 Nm)
- V.A.G 1332 Torque wrench (40...200 Nm)

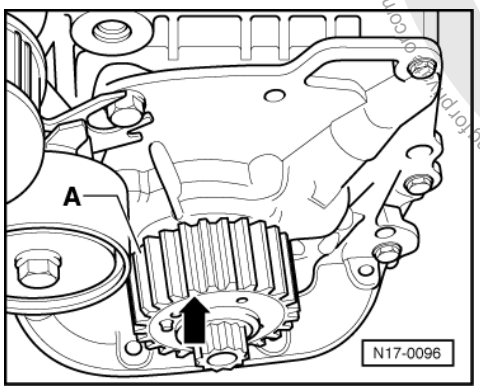
- 3099 Counter-hold tool



Removing

- Remove toothed belt => Page 24 , Removing, installing and tensioning toothed belt.
- -> Position crankshaft at TDC No. 1 cylinder -arrow-:

  The chamfered tooth on the toothed belt sprocket must align with the marking on the oil pump.



- -> Turn crankshaft/toothed belt sprocket three teeth anti-clockwise away from TDC:

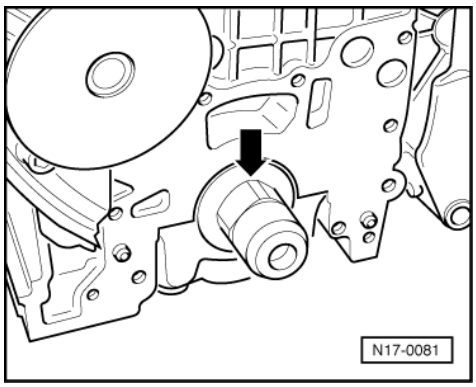
  The third tooth -arrow-, to the right of the chamfered tooth -A- on the toothed belt sprocket, must align with the TDC marking on the oil pump housing.

Note:

This procedure moves the crankshaft to the correct installation position for the oil pump. One of the polygon cams on the crankshaft is uppermost.

- Remove camshaft sprocket. When loosening camshaft sprocket bolt counter-hold with 3036.
- Remove toothed rear belt guard together with coolant pump =>Page 107 .
- Remove the toothed belt sprocket camshaft and toothed belt tensioning roller.
- Remove sump => Page 85 .
- Remove suction pipe => Page 83 , item 24 .
- Remove oil pump.
- Remove gasket.
- Remove sealant remnants on cylinder block with a flat scraper.

Protected by copyright. Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

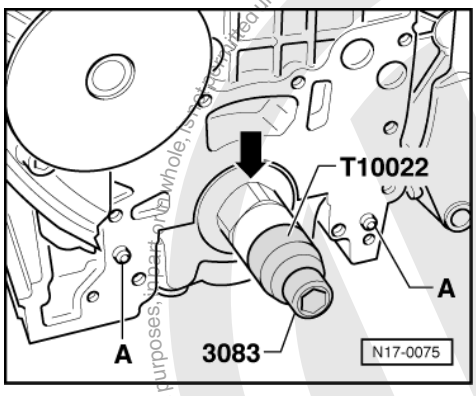


- Clean sealing surfaces, they must be oil and grease free.

Installing

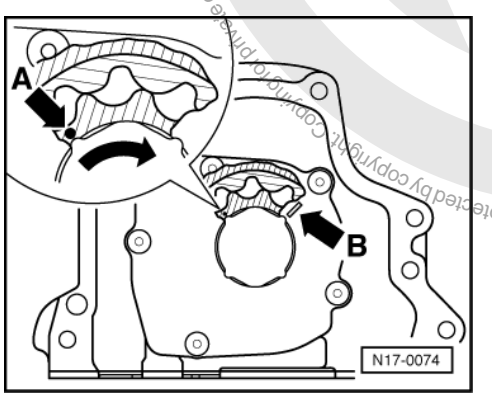
Conditions

- -> One of the polygon cams -arrow- on the crankshaft is uppermost.



Work sequence

- -> Fit sleeve T10022 and hexagon socket head bolt from 3083 onto crankshaft and tighten hand tight.
- Fit new gasket onto guide pins -A-.



- -> Position one of the oil pump inner rotor markings arrow -A- on installation position mark arrow -B- on oil pump housing cover.
- Coat the four crankshaft polygon cams with oil.
- Guide oil pump carefully onto crankshaft polygon cams.

- Align inner rotor to crankshaft polygon cams by turning slightly if necessary.
- Then slide oil pump carefully onto guide pins.
- Secure oil pump with new bolts.
  Tightening torque: 12 Nm
- Remove sleeve T10022.
- Install suction pipe => Page 83 , item 24 .

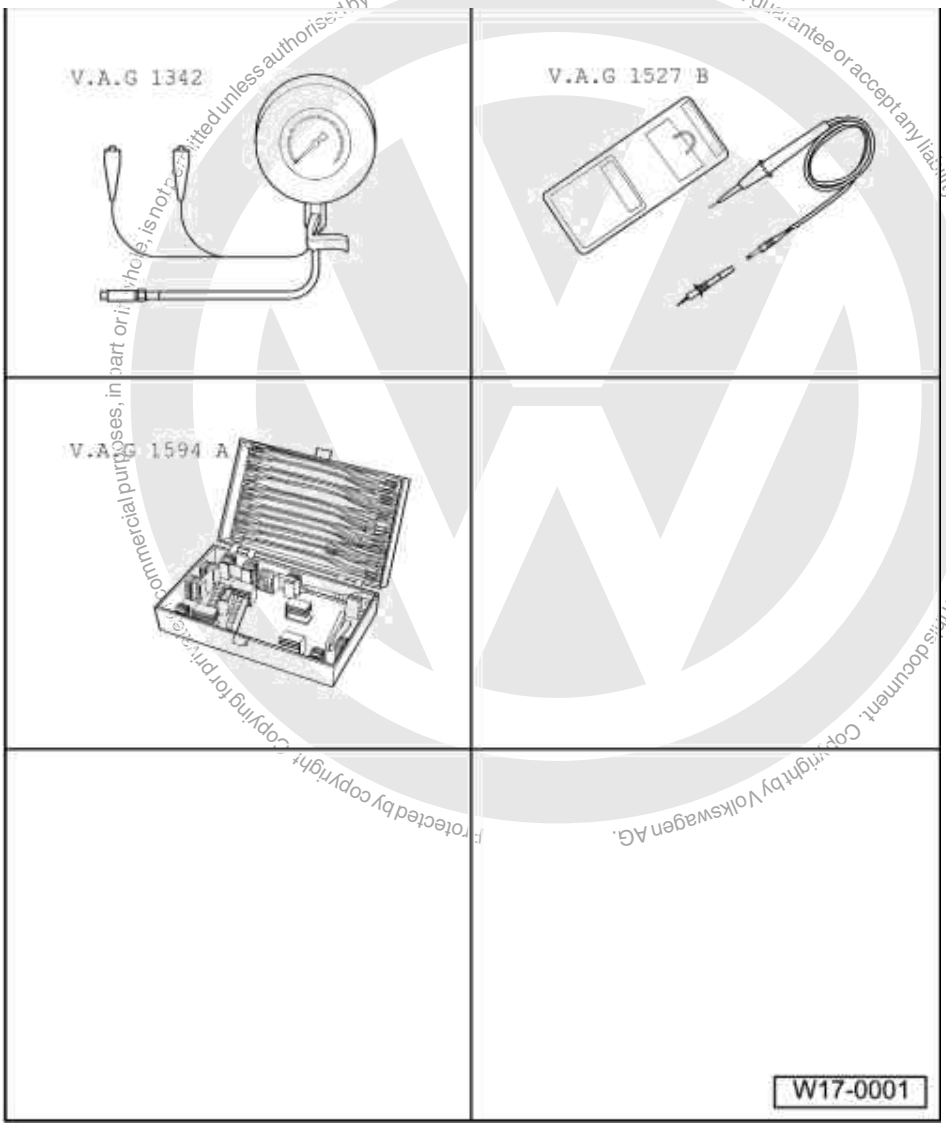
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

- Install oil sump => Page 85 .

The rest of the assembly is basically a reverse of the dismantling sequence.

Installing toothed belt and adjusting timing => Page 24 .

1.4 - Checking oil pressure and oil pressure switch



Protected by copyright. Copyright by Volkswagen AG.
Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document.

satelettronica

Special tools, workshop equipment, test and measuring appliances and auxiliary items required

- V.A.G 1342 Oil pressure tester
- V.A.G 1527 B Diode test lamp
- V.A.G 1594 A Adapter set

Function of the dynamic oil pressure warning indicator

When not under pressure, the oil pressure switch is open and will close when the operating pressure is attained.

The oil pressure warning will be activated
approx. 10 seconds

after switching the ignition on.

Switch-in delay of oil pressure warning
approx. 3 seconds.

Switch-off delay of oil pressure warning
approx. 5 seconds.

Checking warning lamp

After switching on the ignition and engine not started the oil pressure warning lamp in dash panel insert must light for
approx. 3 seconds
and then go out. The test will be terminated if the engine is running.

Criteria for warning

The optical oil pressure warning switches on (the oil pressure warning lamp flashes) and the buzzer sounding three times for the acoustical warning under one of the following conditions.

- "Ignition on", engine stationary, oil pressure switch closed
- Engine speed above 1500 rpm, oil pressure switch open

Notes:

If the oil pressure switch is closed, the warning lamp will remain switched on if the engine speed is above 5000 rpm. The warning lamp will be switched off again if the engine speed is below 5000 rpm.

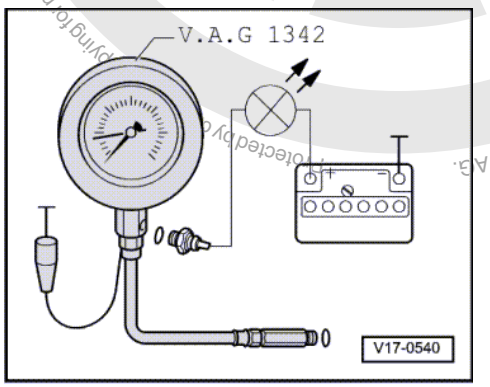
If the oil pressure switch is open for 0.3 ... 3.0 seconds when the engine speed is above 1500 rpm, it will be stored in the combi-processor in the dash panel insert. If this condition occurs three times when the engine is running, the oil pressure warning will be activated and will not be cancelled even below 1500 rpm.

The oil pressure warning will be cancelled when the oil pressure switch is closed for longer than 5 seconds at an engine speed above 1500 rpm or when the ignition is switched off.

Test conditions

- Engine oil level OK, checking => Page 85
- Oil pressure warning lamp (K3) must light up for approx. 3 seconds when ignition is switched on
- Engine oil temperature at least 80 °C (radiator fan must have run once)

Test sequence



- -> Remove oil pressure switch (F1) and screw into tester.
- Screw tester into the cylinder head in place of the oil pressure switch.
- Connect brown wire of tester to earth (-).
- Connect diode test lamp V.A.G 1527 B using aux. cables from V.A.G 1594 A to battery positive (+) and oil pressure switch.
- If the LED lights up, renew oil pressure switch (F1) .

satelettronica

If the LED does not light up:

- Start engine and increase speed slowly.
  At
  0.3...0.6 bar
  the LED must light up; otherwise renew oil pressure switch.
- Increase engine speed further.
  At 2000 rpm and an oil temperature of 80 °C the oil pressure should be at least 2.0 bar.

At higher engine speed the oil pressure must not exceed 7.0 bar.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

19 - Cooling system

1 - Removing and installing parts of cooling system

1.1 - Removing and installing parts of cooling system

Notes:

- When the engine is warm the cooling system is under pressure. If necessary release pressure before commencing repair work.
- Hoses are secured with spring-type clips. In cases of repair only use spring-type clips.
- For fitting the spring-type clips, assembly tool VAS 5024 is recommended.

Perform cooling system leakage test with cooling system tester V.A.G 1274 and adapters V.A.G 1274/3 and V.A.G 1274/4.

satelettronica

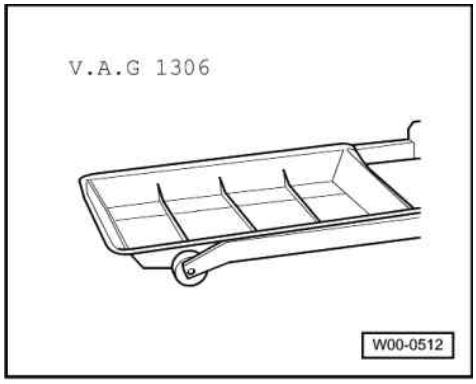
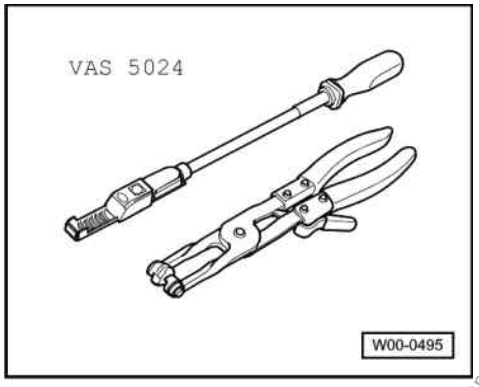
1.5 - Draining and filling cooling system

Special tools, workshop equipment, testers, measuring instruments and auxiliary items required



- V.A.G 1306 Drip tray



- VAS 5024 Assembly tool for spring-type clips
- Anti-freeze tester

Draining

- Remove cap from coolant expansion tank.
- Drain coolant from bottom radiator hose.

Note:

Observe disposal regulations!

Filling

Notes:

- Only use coolant additive G 12 in accordance with TL VW 774 F.
  Distinguishing feature: coloured violet
- G 12 violet (in accordance with TL VW 774 F) can be mixed with the previous coolant additive G 12 red!
- G 12 and coolant additives marked "In accordance with TL VW 774 F" prevent frost and corrosion damage, scaling and also raise boiling point of coolant. For this reason the system must be filled all year round with frost and corrosion protection additives.

- Because of its high boiling point, the coolant improves engine reliability under heavy loads, particularly in countries with tropical climates.
- Protection against frost must be assured to about -25 °C (in arctic climatic countries to about -35 °C).
- The coolant concentration must not be reduced by adding water even in warmer seasons and in warmer countries. The anti-freeze ratio must be at least 40 %.
- If for climatic reasons a greater frost protection is required, the amount of G 12 can be increased, but only up to 60 % (frost protection to about -40 °C), as otherwise frost protection is reduced again and cooling effectiveness is also reduced.

Protected by copyright. Copyright by Volkswagen AG.
Copying for commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document.
satelettronica

- If radiator, heat exchanger, cylinder head or cylinder head gasket is replaced, do not reuse old coolant.

Recommended mixture ratios:

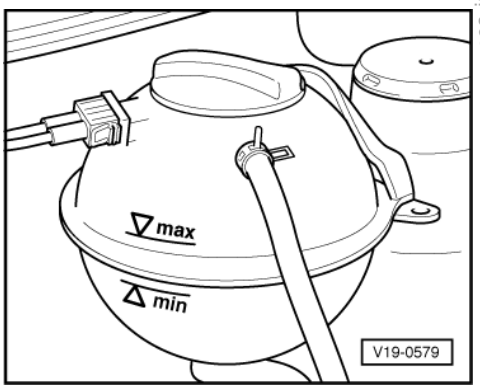
Frost pro- tection to	Anti-freeze amount	G 121)	Water1)
-25 °C	40 %	2.25 l	3.35 l
-35 °C	50 %	2.8 l	2.8 l

1) The quantity of coolant can vary depending upon the vehicle equipment.

With cooling system charging unit VAS 6096

- Fill coolant circuit using cooling system charging unit VAS 6096.

=> Operating instructions for cooling system charging unit VAS 6096



Not using cooling system charging unit VAS 6096

- -> Fill with coolant up to max. mark on expansion tank.

With and without cooling system charging unit VAS 6096

- Fit expansion tank cap.
- Start engine and maintain an engine speed of about 2000 rpm for approx. 3 minutes.
- Run engine until radiator fan cuts-in.
- Check coolant level and replenish as necessary. When the engine is at normal operating temperature, the coolant level must be on the max. mark, when the engine is cold, between the min. and max. marks.

satelettronica

Special tools, workshop equipment, test and measuring appliances and auxiliary items required

- V.A.G 1306 Drip tray
- V.A.G 1331 Torque wrench (5...50 Nm)
- VAS 5024 Assembly tool for spring-type clip
- Anti-freeze tester

Removing

Vehicles with air conditioner

- Drain coolant => Page 103 .
- Pull coolant hoses off radiator.
- Pull connectors off thermo-switch.
- Remove radiator fan together with fan ring.
- Remove radiator securing bolts and take out radiator.

Vehicles with air conditioner

- Drain coolant => Page 103 .
- Pull coolant hoses off radiator.
- Pull connectors off thermo-switch.

- Remove radiator securing bolts.

Warning! The air conditioning system refrigerant circuit must not be opened.

Note:

To prevent damage to condenser and also to the refrigerant lines/hoses, ensure that the pipes and hoses are not stretched, kinked or bent.

- Remove retaining clamp(s) from refrigerant pipes.
- Removing lock carrier with attachments:

=> General body repairs; Repair Group 50; Body, front; Removing and installing lock carrier with attachments
Body, front Removing and installing lock carrier with attachments

Secure condenser with radiator to body so that the refrigerant pipes/hoses are not under stress.

- Unbolt condenser from radiator.
- Pull radiator out carefully.
- Unbolt double fan ring from radiator.

Installing

Installation is carried out in the reverse order, when doing this note the following:

- Filling with coolant => Page 103
- Electrical connections and routing:

=> Current flow diagrams, Electrical fault finding and Fitting locations

satelettronica

Special tools, workshop equipment, test and measuring appliances and auxiliary items required

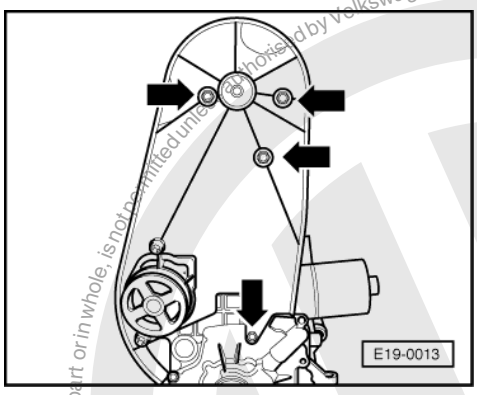
- 3036 Counter hold tool
- V.A.G 1306 Drip tray
- V.A.G 1331 Torque wrench (5...50 Nm)
- VAS 5024 Assembly tool for spring-type clip
- Anti-freeze tester

Notes:

- The integrated coolant pump seal must not be separated from the coolant pump.
- Damaged or leaking coolant pumps must be replaced complete with seal.

Removing

- Drain coolant => Page 103
- Remove ribbed belt => Page 21 .
- Remove toothed belt => Page 24 , Removing, installing and tensioning toothed belt.
- Remove camshaft sprocket. When loosening camshaft sprocket bolt counter-hold with 3036.



- Remove toothed belt tensioning roller.
- -> Remove bolts -arrows- from rear toothed belt guard.
- Remove securing bolts from coolant pump and remove coolant pump together with toothed belt guard, rear.

Installing

- Position coolant pump with rear toothed belt guard and tighten securing bolts.
  Torque setting: 20 Nm

The rest of the assembly is basically a reverse of the dismantling sequence.

- Install camshaft sprocket. To do this, hold camshaft sprocket with counter-hold tool 3036 and tighten new securing bolts to
  20 Nm + 1/4 turn further (90 °).

Installing toothed belt and adjusting timing => Page 24

- Install ribbed belt => Page 21 .

1.4 - Safety precautions when working on the fuel supply system

- For safety reasons fuse No. 40 must be removed from fuse holder before opening the fuel system, otherwise the fuel pump can be activated by the door contact switch in driver's door.

Warning!
Fuel supply lines are under pressure! Before removing from hose connection wrap a cloth around the connection. Then release pressure by carefully pulling hose off connection.

When removing and installing the fuel gauge sender or fuel pump (fuel delivery unit) from a full or partly full fuel tank the following must be observed:

- Before commencing work, switch on exhaust extraction system and place an extraction hose close to the sender opening in the fuel tank to extract escaping fuel fumes.
  If no exhaust extraction system is available, a radial fan (as long as motor is not in air flow) with a displacement greater than 15 m3/h can be used.

- Prevent skin contact with fuel! Wear fuel-resistant gloves!

1.5 - Rules for cleanliness

When working on the fuel supply/injection system, pay careful attention to the following "5 rules":

- Thoroughly clean all unions and the adjacent areas before disconnecting.
- Place parts that have been removed on a clean surface and cover. Do not use fluffy cloths!
- Carefully cover opened components or seal, if the repair cannot be carried out immediately.
- Only install clean components:
  Only unpack replacement parts immediately prior to installation.
  Do not use parts that have been stored loose (e.g. in tool boxes etc.).
- When the system is open:
  Do not work with compressed air if this can be avoided.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

satelettronica

Do not move vehicle unless absolutely necessary.

1.6 - Crash fuel shut-off

Function

Vehicles with an airbag are fitted with a crash fuel shut-off system. It reduces the danger of a fire in a crash as the fuel pump is switched off via the fuel pump relay.
Simultaneously this system provides improved starting characteristics for the engine.
When the door is opened the fuel pump is activated for 2 seconds to build-up the pressure in fuel system.

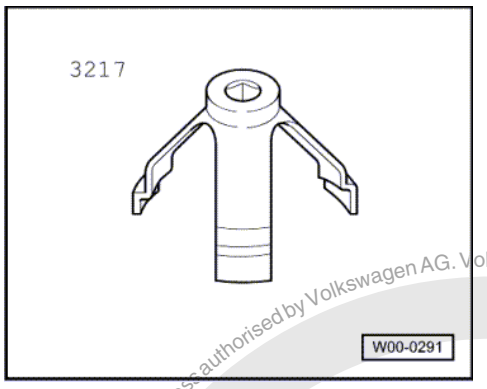
When opening the fuel system:

Observe safety precautions=> Page 120 .

- Check fuel pump relay:

=> Current flow diagrams, Electrical fault finding and Fitting locations

1.7 - Removing and installing fuel delivery unit



Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- -> 3217 Union nut spanner

Removing

- First check whether a coded radio is fitted. If this is the case obtain the anti-theft coding.
- Note safety precautions before starting work => Page 120
- With ignition switched off disconnect battery earth strap.

Caddy Van:

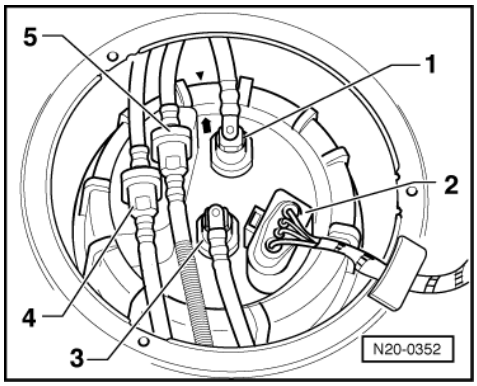
- Lift front, right load area floor covering.
- Now remove the right-hand load area floor piece.
- Remove cover from fuel delivery unit.

Caddy Kombi, Polo Classic, Polo Estate:

- Fold rear seat bench forwards.
- Remove cover from fuel delivery unit.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

Warning!
Fuel supply lines are under pressure! Before removing from hose connection wrap a cloth around the connection. Then release pressure by carefully pulling hose off connection.



- -> Pull connector -2- supply pipe -3-, and return pipe -1- off flange.
- Disconnect supply pipe -4- and breather pipe -5-.
- Place all pipes outside of well.
- Place the spanner 3217 on the three rounded-off ribs on the union nut and unscrew union nut from flange.
- Pull delivery unit and seal out of the opening in fuel tank.

Note:

If the delivery unit is to be renewed then drain old delivery unit before disposal.

Installing

- Installation of the fuel delivery unit is carried out in the reverse order.

Notes:

- When inserting the fuel delivery unit ensure that the fuel gauge sender is not bent.
- Coat flange seal with fuel when fitting.
- Fitting position of fuel delivery unit flange => Page 120 , Fig. 1 .

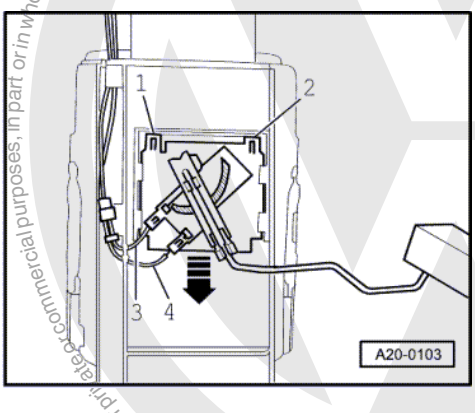
- Perform the work sequence "Procedure after interrupting voltage supply".

=> Repair group 24; Engine control unit; Procedure after interrupting voltage supply. Engine control unit Procedure after interrupting voltage supply.

1.8 - Removing and installing fuel gauge sender

Removing

- Remove fuel delivery unit=> Page 121 .



Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

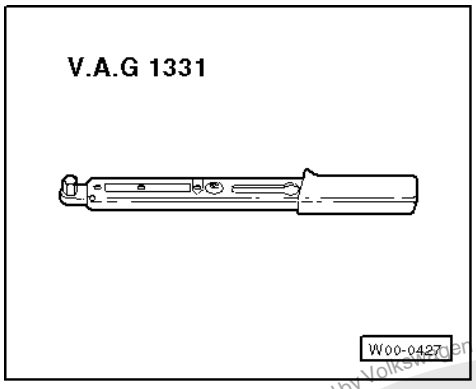
satelettronica

- -> Release and pull off the terminals for wires -3- and -4-.
- Lift retaining tabs -1- and -2- with a screwdriver and pull fuel gauge sender out downwards -arrows-.

Installing

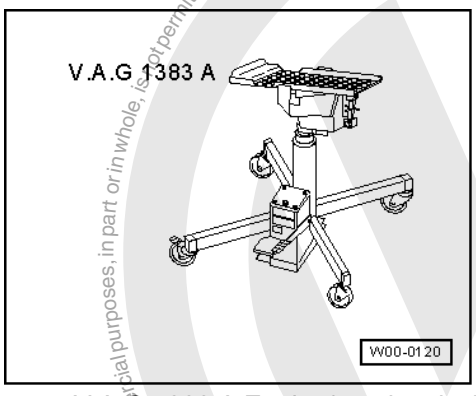
- Insert fuel gauge sender in the guides on the fuel delivery unit and push up until it engages.
- Remove fuel delivery unit=> Page 121 .

1.9 - Removing and installing fuel tank



Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- -> V.A.G 1331 Torque wrench (5...50 Nm)



- -> V.A.G 1383 A Engine/gearbox jack

Removing

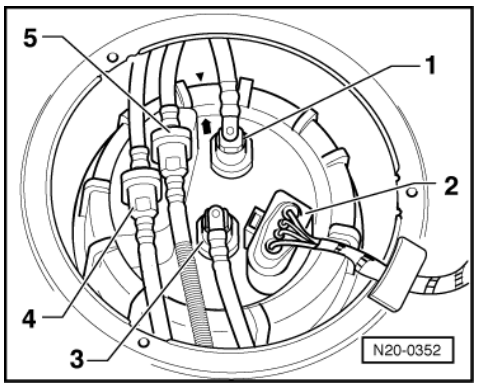
- Note safety precautions before starting work
  => Page 120
- First check whether a coded radio is fitted. If this is the case obtain the anti-theft coding.
- With ignition switched off disconnect battery earth strap.

Caddy Van:

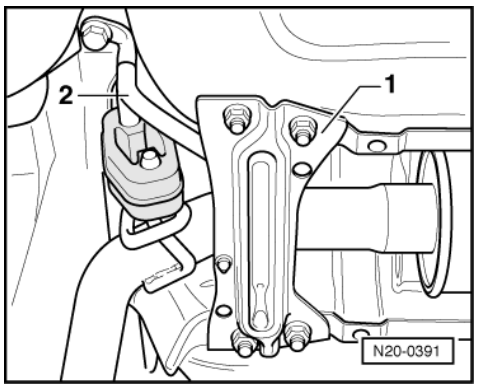
- Lift front, right load area floor covering.
- Now remove the right-hand load area floor piece.
- Remove cover from fuel delivery unit.

Caddy Kombi, Polo Classic, Polo Estate:

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica



- Fold rear seat bench forwards.
- Remove cover from fuel delivery unit.
- -> Pull fuel return pipe -1- and connector -2- off flange.
- Disconnect fuel supply pipe -4- and breather pipe -5- at hose connections.
- Drain fuel tank and clean area around fuel filler pipe.



- -> Remove connecting strut/bracket -1- from body (bracket -2- is welded to connecting strut).
- Remove all rear exhaust system mountings from body. Then lower the exhaust system slightly and secure to body with wire.
- Remove rear right wheel.
- Remove rear right wheel housing liner.
- Unbolt filler neck from body.
- Take filler cap off filler neck and detach filler neck from cup.

Polo Classic, Polo Estate:

- Pull off breather hoses at filler neck.
- Remove clamping disc for fuel tank heat shield.
- Unbolt fuel tank from body and lower slightly using engine/gearbox jack.

- Remove filler neck.
- Take out fuel tank together with heat shield.

Caddy:

- Remove shock absorber upper securing nut and push securing bolt out inwards approx. 2 cm (Do not remove shock absorber).
- Remove heat shield on fuel tank.
- Take out fuel tank, when doing this guide fuel filler neck out between shock absorber and spring (turn fuel tank through 90°).

Installing

Installing is basically in the reverse order but note following:

◆ Install breather and fuel pipes kink-free.

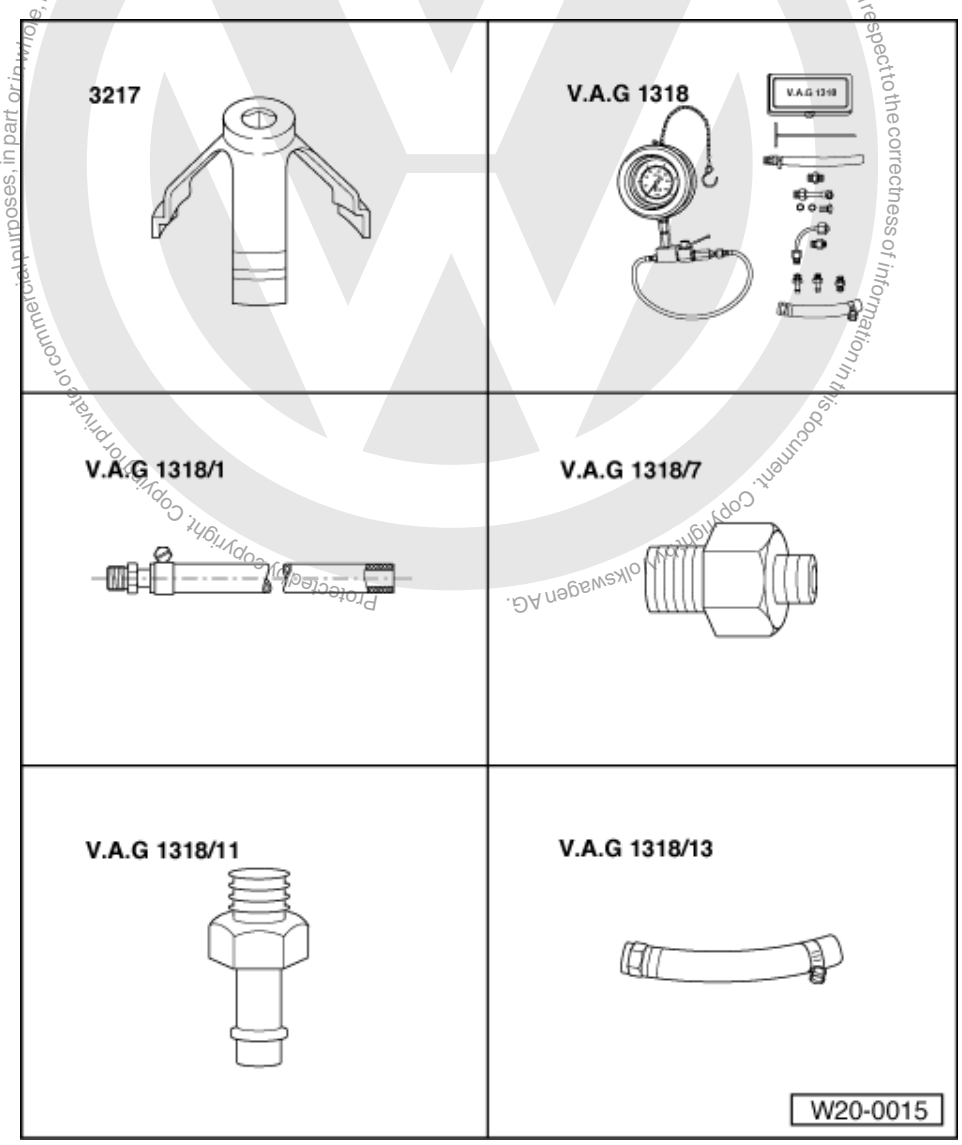
satelettronica
Protected by copyright. Copying for private or commercial purposes, in whole or in part, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

- Secure fuel hoses with screw-type clamps.
- Do not interchange supply and return pipes (return pipe blue or with blue markings, supply pipe black).

- Perform the work sequence "Procedure after interrupting voltage supply".

=> Repair group 24; Engine control unit; Procedure after interrupting voltage supply. Engine control unit Procedure after interrupting voltage supply.

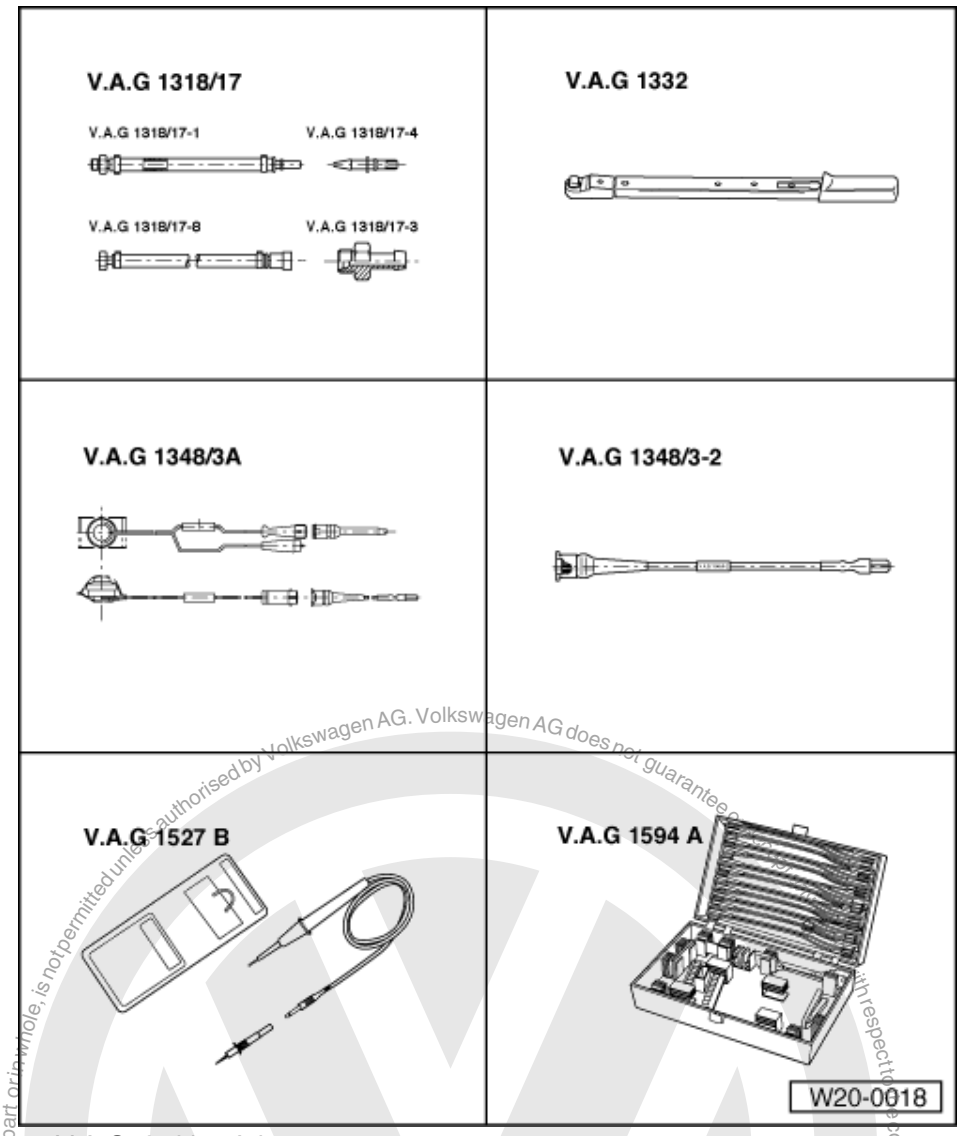
1.10 - Checking fuel pump



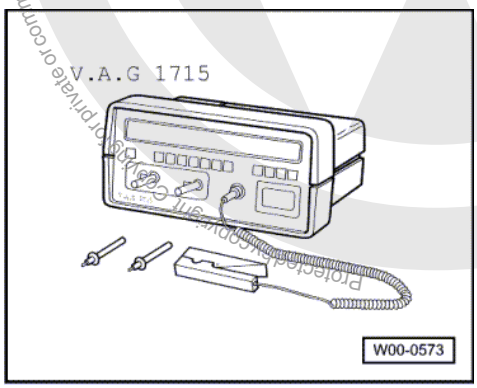
Special tools, workshop equipment, test and measuring appliances and auxiliary items required

- 3217 Spanner for union nut
- V.A.G 1318 Pressure gauge
- V.A.G 1318/1 Adapter
- V.A.G1318/7 Adapter
- V.A.G 1318/11 Adapter
- V.A.G 1318/13 Adapter

satelettronica



- V.A.G1318/17 Adapter
- V.A.G 1332 Torque wrench (40...200 Nm)
- V.A.G 1348/3 A Remote control
- V.A.G 1348/3-2 Adapter cable
- V.A.G 1527 B Diode test lamp
- V.A.G 1594 A Adapter set

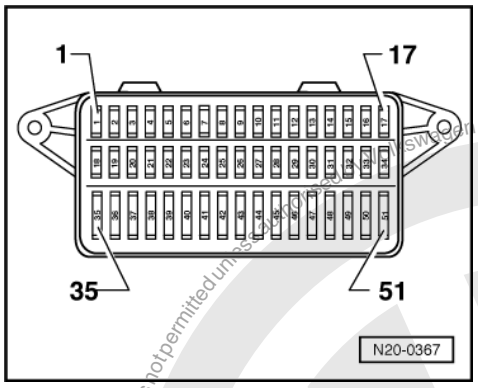


- -> V.A.G 1715 Multimeter
- Measuring container
- Current flow diagram

satelettronica

Test conditions

- Battery voltage at least 11.5 V



- -> Fuse No. 40 O.K.

Note:

Observe functional description of crash fuel shut-off=> Page 121 .

Test sequence

Checking function and voltage supply

Note:

Check whether a coded radio is installed as during the forthcoming work sequences the battery earth strap must be disconnected. Obtain radio code first if necessary.

Caddy Van:

- Lift front, right load area floor covering.
- Now remove the right-hand load area floor piece.
- Remove cover from fuel delivery unit.

Caddy Kombi, Polo Classic, Polo Estate:

- Fold rear seat bench forwards.
- Remove cover from fuel delivery unit.
- Briefly operate starter. Fuel pump must be heard to run briefly -approx. 1 second-.

If the fuel pump does not run:

- Switch off ignition.
- Remove cover in front of fuse holder.
- Pull fuse No. 40 out of fuse holder.

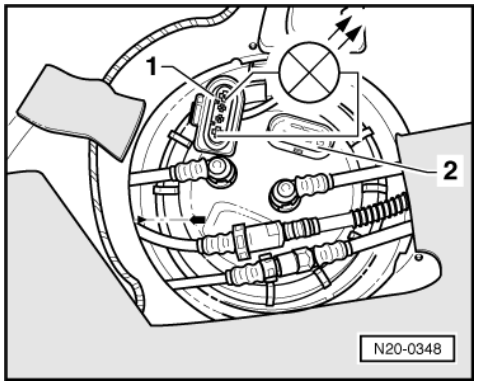
- -> Connect remote control V.A.G 1348/3A with adapter cable V.A.G 1348/3-2 to contact 40b -arrow- to fuel pump and battery positive (+).
- Operate remote control.

Fuel pump runs:

- Check activation of fuel pump relay:

=> Current flow diagrams, Electrical fault finding and Fitting locations

Fuel pump does not run:



- -> Pull 4-pin connector -1- off fuel tank flange -2-.
- Connect diode test lamp V.A.G 1527 using aux. cables from V.A.G 1594 to the outer contacts of the connector.
- Operate remote control.
  LED must light up

LED does not light up:

- Locate and eliminate open circuit using current flow diagram

LED lights up (voltage supply OK.):

- Fit spanner 3217 on the three rounded ribs of union nut and unscrew union nut from flange.
- Check that the electrical wires between flange and fuel pump are connected.

If not open circuit can be found:

- Fuel pump defective, renew fuel delivery unit =>Page 121 , Removing and installing fuel delivery unit.

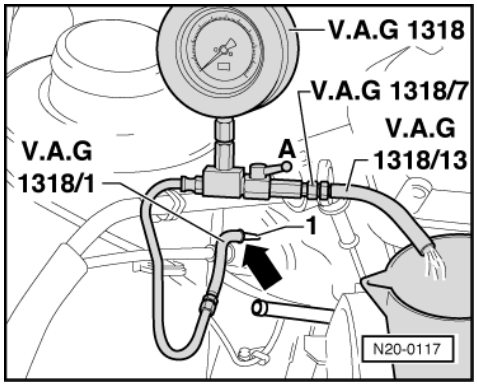
Checking delivery rate

Test conditions

- The voltage supply for the fuel pump OK.
- Remote control V.A.G 1348/3A is still connected.

Test sequence

- Remove filler cap from fuel tank filler neck.

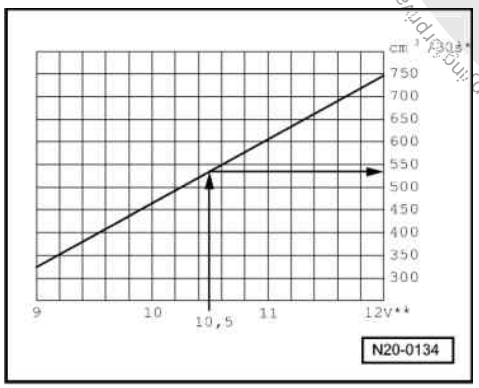


Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

Warning!
Fuel supply lines are under pressure! Before removing from hose connection wrap a cloth around the connection. Then release pressure by carefully pulling hose off connection.

- -> Pull fuel supply hose (white marking) off fuel supply pipe -1-.
- Connect pressure gauge V.A.G 1318 with adapter /1 to fuel supply pipe.
- Screw adapter hose /13 with adapter /7 to pressure gauge and hold hose in measuring container.

- Open the pressure gauge shut-off tap. The lever then points in the direction of flow -A-.
- Operate remote control V.A.G 1348/3A and slowly close cut-off tap, until pressure gauge shows 3 bar.
  From this point on do not move position of cut-off tap.
- Empty the measuring container.
- The fuel pump delivery range is dependent upon battery voltage. Therefore connect the multimeter with adapter cables from V.A.G 1594 to the vehicle battery.
- Operate remote control for 30 seconds
  and measure battery voltage.



- -> Compare the quantity of fuel delivered with specification.

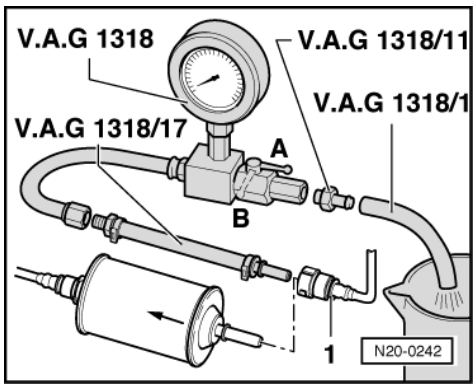
  *) Minimum delivery cm3/30 seconds

  **) Voltage at fuel pump with engine stopped and pump running (approx. 2 volts less than battery voltage).

Example:

During the test, a voltage of 12.5 volts is measured at the battery. As the voltage at the pump is approx. 2 volts less than the battery voltage, this will equate to a minimum delivery of 540 cm3/30 s.

If the minimum delivery rate is not attained:



- Check the fuel pipes for possible restrictions (kinks) or blockages.
- -> Pull supply hose -1- off inlet to fuel filter.
- Connect pressure gauge V.A.G 1318 with adapter 1318/17 to fuel supply pipe.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

- Repeat delivery rate check.

If the minimum delivery rate is now attained:

- Replace the fuel filter.

If the minimum delivery rate is again not attained:

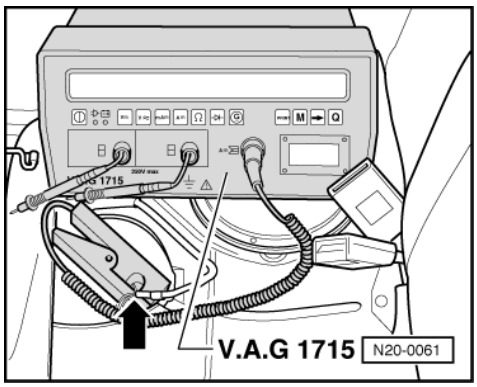
- Remove the fuel delivery unit and check the strainer filter for soiling.

Only when up to now no fault has been detected:

- Fuel pump defective, renew fuel delivery unit =>Page 121 , Removing and installing fuel delivery unit.

If the delivery rate has been attained but nevertheless you suspect a fuel supply system fault (e.g. intermittent failure of fuel supply system):

- Check the current draw of the fuel pump as follows:



- Reconnect all disconnected fuel pipes.
- -> Connect the multimeter V.A.G 1715 using the current clamp to the red/yellow wire from wiring harness.
- Start the engine and run at idling speed.
- Measure the current draw of the fuel pump.
  Specification: max. 8 amps.

Note:

If the fuel system malfunction is intermittent, you can perform the check during a test drive with the help of a 2nd person.

If the current draw is exceeded:

- Fuel pump defective, renew fuel delivery unit =>Page 121 , Removing and installing fuel delivery unit.

Checking fuel pump non-return valve

Test conditions

- Remote control V.A.G 1348/3A is still connected.
- Pressure gauge V.A.G 1318 is still connected.

Test sequence

Note:

With this check the fuel supply pipe connections from the fuel delivery unit to the point at which the pressure gauge V.A.G 1318 is connected will be checked for leaks at the same time.

- Close pressure gauge cut-off tap (lever at right angle to direction of flow).
- Operate remote control at short intervals until a pressure of
  3 bar

has built up.

Warning!
Danger of spray when opening the shut-offtap, hold container over the free connection of the pressure gauge.

- If pressure builds up too high, lower excess pressure by carefully opening the shut-off tap.
- Watch pressure drop. After 10 minutes the pressure must not drop below 2 bar.

If the pressure drops further:

- Check pipe connections for leaks.

If no fault is detected in the wiring:

- Fuel pump defective, renew fuel delivery unit =>Page 121 , Removing and installing fuel delivery unit.

2 - Electronic power control (EPC)

2.1 - Electronic power control (EPC)

2.2 - Function of EPC system

With the EPC system the throttle valve is not operated by a cable. There is no mechanical connection between accelerator and throttle valve.

The position of the accelerator is transmitted to the engine control unit by two accelerator position senders (variable resistors together in a housing) which are connected to the accelerator pedal.

The position of the accelerator (drivers requirement) is the main input value for the engine control unit.

The throttle valve is operated over the complete revolution and load range by an electric motor (throttle valve positioner) in the throttle valve control part.

The throttle valve is operated by the throttle valve positioner which is controlled by the engine control unit.

When the engine is not running and the ignition is switched on the engine control unit moves the throttle valve exactly as prescribed by the accelerator pedal position sender. This means that when the accelerator is depressed halfway the throttle valve positioner opens the throttle valve by the same amount, the throttle is then approximately half open.

When the engine is running (under load) the engine control unit can open or close the throttle valve independently of the accelerator pedal position sender.

This means that the throttle valve can already be completely open even though the accelerator pedal is depressed half way.

This also gives vastly improved consumption and exhaust emission levels at certain load conditions.

The torque required by the engine can be produced by the engine control unit by optimising the combination of throttle valve cross-section and charge pressure.

It is incorrect to believe that the "EPC" is comprised of one or two components only. The EPC is a system, which is comprised of all components which have an influence, control or monitor the position of the throttle valve, e.g. the accelerator pedal position sender, the throttle valve control unit, the EPC warning lamp, the engine control unit.

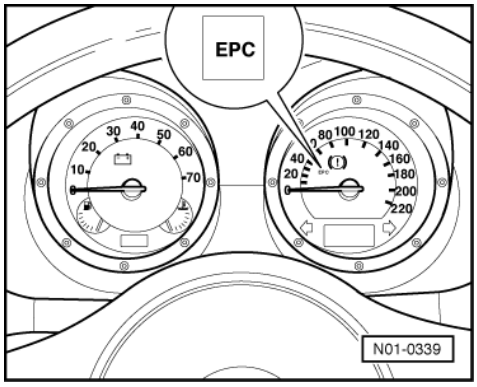
Checking function of warning lamp



- Switch on ignition.

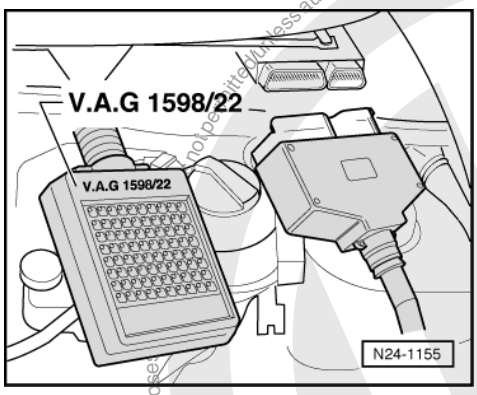
  -> The EPC warning lamp must light up.

- Start engine and run at idling speed.

  The EPC warning lamp must
  go out
  when no EPC fault has been stored.

- Switch off ignition.

Electronic accelerator warning lamp does not light up



- Remove left plenum chamber cover.
- -> Connect test box V.A.G 1598/22 to control unit wiring harness.
- Bridge test box sockets 2 + 30 with aux. cables from V.A.G 1594.
- Switch ignition on.
  The fault lamp must light up

If the fault lamp does not light up:

- Switch off ignition.
- Remove dash panel insert and check the bulb and its voltage supply.:

=> Electrical system; Repair group 90; Dash panel insert; Removing and installing dash panel insert Dash panel insert Removing and installing dash panel insert

If no fault is found:

- Check wiring for open circuit between test box socket 30 and dash panel insert using current flow diagram:

=> Current flow diagrams, Electrical fault finding and Fitting locations

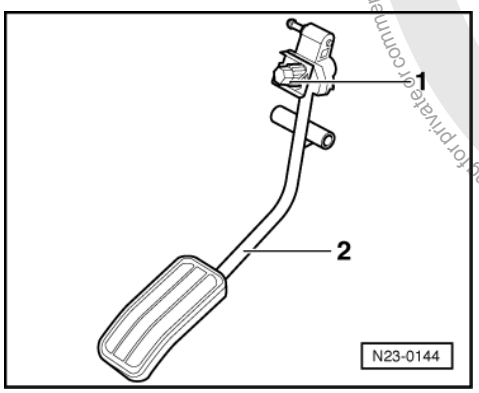
-> Check accelerator pedal position display in display zone 3. The accelerator pedal should not be depressed when doing this.
Specification: 0.0 %

```
Read measured value block      54
rpm     0 0 0     100 %     18.4 5C
```

-> Slowly depress accelerator pedal and at the same time observe display zone 3. The accelerator pedal position value must continually rise and reach
100 %
just before the maximum acceleration limit.



- -> If necessary adjust accelerator pedal -2- by turning the adjustment screw -1- so that when accelerator pedal is not depressed (idling position)
0.0 %
and with accelerator pedal depressed to just before full throttle position
100 %
is displayed.

3 - Activated charcoal filter system

3.1 - Activated charcoal filter system

3.2 - Function

Depending upon the air pressure and ambient temperature, fuel vapour will form above the level of fuel in the tank.

The activated charcoal filter system prevents these HC emissions escaping to the atmosphere.

In limited quantities, fuel vapours pass through a gravity valve (which closes at an angle of 32 °) located at the highest point in the tank and through a breather valve into the activated charcoal filter.

Protected by copyright. Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG.
satelettronica

The activated charcoal stores these vapours like a sponge.
When the Lambda control is active when driving (engine warm), the tank venting valve (N80), also known as the regeneration valve), is activated (pulsed) from engine control unit depending upon load and engine speed. The opening period is dependent on the input signals.
Intake manifold vacuum draws fresh air through the vent opening on the underside of the activated charcoal filter during the purging procedure (regenerating the activated charcoal). The fuel vapours stored in the activated charcoal and fresh air are pulse-fed for combustion.
The pressure retention valve prevents fuel vapours from being drawn from the tank when the solenoid valve is open and intake manifold vacuum is present. It therefore ensures that the evacuation of the activated charcoal filter has priority.
No voltage (e.g. wiring open circuit) the tank venting valve is closed. The activated charcoal filter will not be purged.

Notes:

- Hose connections are secured with either spring-type or clamp-type clips.
- Always replace clamp-type clips with spring-type clips.
- For fitting the spring-type clips, assembly tool VAS 5024 is recommended.

Observe safety precautions=> Page 120 .

=> Repair group 01; Final control diagnosis; Performing final control diagnosis Final control diagnosis Performing final control diagnosis

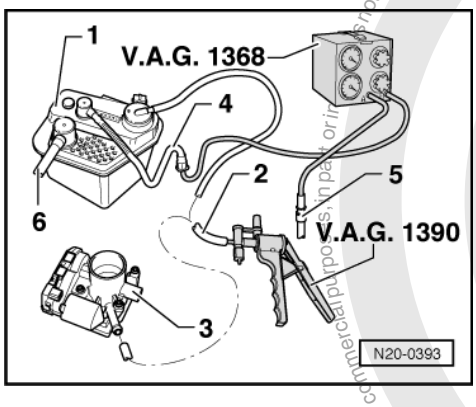
- Operate hand vacuum pump V.A.G 1390 several times.
  Vacuum must not
  build up.

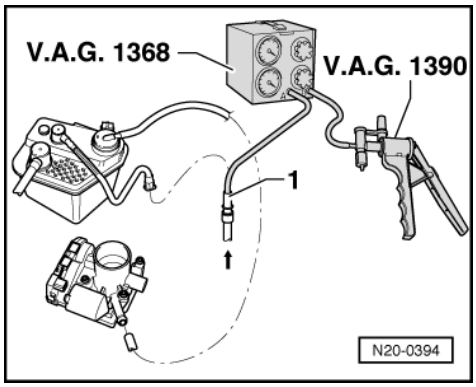


If vacuum builds up:

- -> Check breather connection -6- on activated charcoal filter -1- for soiling and clean if necessary.

If vacuum does not build up:

- Remove fuel filler cap.



- -> Connect hand vacuum pump V.A.G 1390 to vacuum tester V.A.G 1368 -connection B-.
- Set vacuum tester to -A/B- position.
- Operate V.A.G 1390 several times. Vacuum must
  not build-up.

If vacuum builds-up:

- Check gravity/overflow valve => Page 110 , item 3
- Check pipe/hose -1- from fuel tank for blockage.

If vacuum does not build up:

- Refit fuel filler cap.
- Operate hand vacuum pump V.A.G 1390 several times.
  Vacuum must not
  build up.

Note:

If the fuel level in the tank is low the hand vacuum must be operated at least 20...30 times.

satelettronica

26 - Exhaust system

1 - Removing and installing parts of exhaust system

1.1 - Removing and installing parts of exhaust system

Notes:

- After working on the exhaust system ensure that the system is not under stress, and that it has sufficient clearance to the bodywork. If necessary, loosen double clamp(s) and align silencer and exhaust pipe so that sufficient clearance is maintained to the bodywork and the support rings are evenly loaded.
- Renew self-locking nuts.
- Components marked with * will be checked by self-diagnosis:

=> Repair group 01; Fault memory; Interrogating and erasing fault memory of engine control unit Fault memory Interrogating and erasing fault memory of engine control unit

- Check catalyst => Page 162 .

6 Lambda probe 2 after catalyst (G130)*, 50 Nm
- Only engine code ANW, AUD
- Checking:

=> Repair group 24; Check functions; Check Lambda probe and Lambda regulation after catalyst Check functions Check Lambda probe and Lambda regulation after catalyst

- Grease only the threads with "G 052 112 A3"; "G 052 112 A3" must not get into the slots on the probe body
- Remove and install with 3337

7 To silencer

8 Stop
- For double clamp

9 Connector
- Only engine code ANW, AUD
- For Lambda probe 2 after catalyst (G130) and Lambda probe heating (Z29)
- Black, 4-pin

15 Lambda probe 1 before catalyst (G39)*, 50Nm

- Checking:

=> Repair group 24; Check functions; Check Lambda probe and Lambda regulation before catalyst Check functions Check Lambda probe and Lambda regulation before catalyst

- Grease only the threads with "G 052 112 A3"; "G 052 112 A3" must not get into the slots on the probe body
- Remove and install with 3337
- Check Lambda probe ageing (cycle duration monitor) (only engine codes ANW, AUD) => Page 162 , Checking catalyst

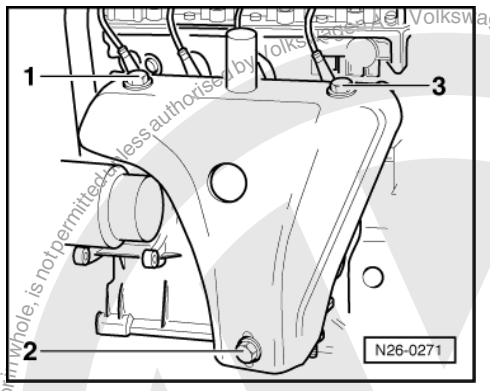
16 Bracket

- For electric wiring of Lambda probe 1 before catalyst

Note:

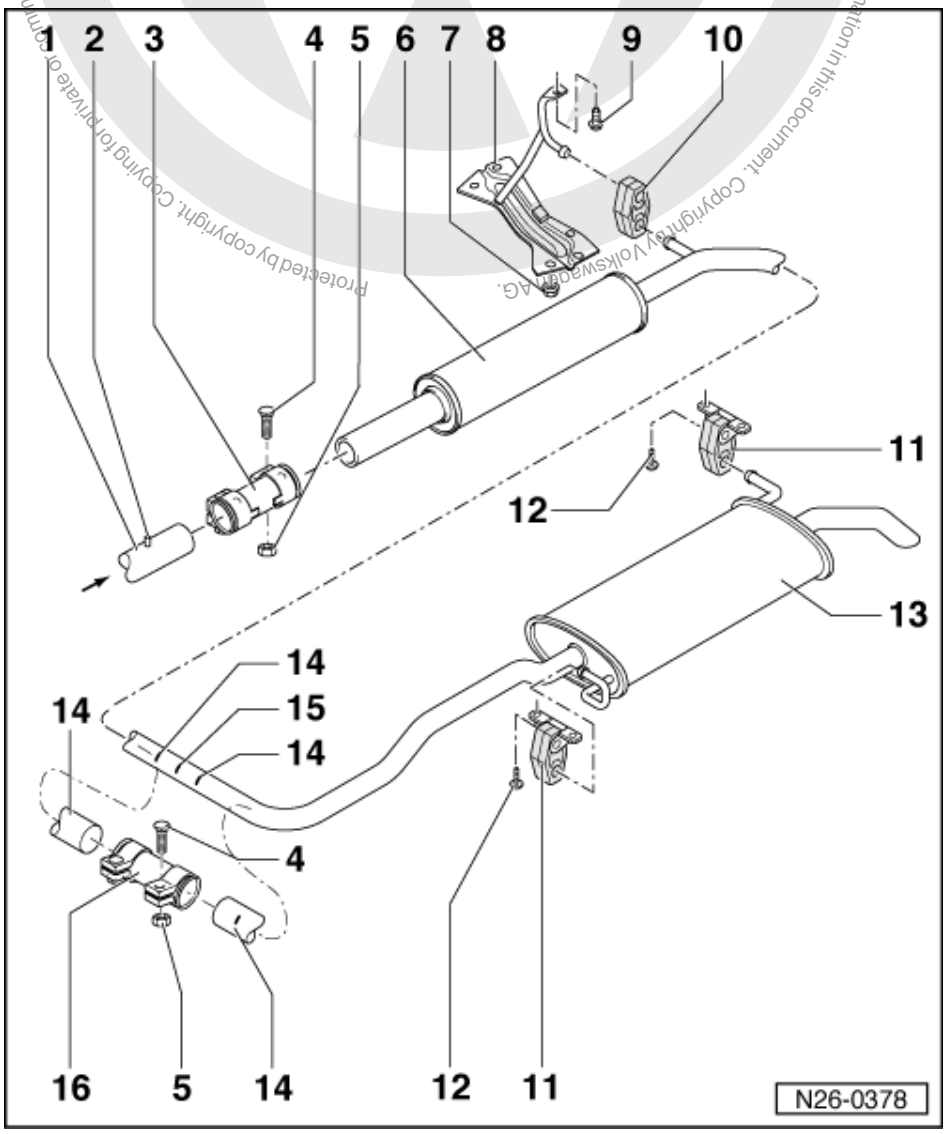
Tighten warm air collector plate in sequence as illustrated to ensure it is installed free of stress.

satelettronica



-> Fig. 1 Tightening sequence, warm air collector plate on exhaust manifold.

1.3 - Silencer with mountings



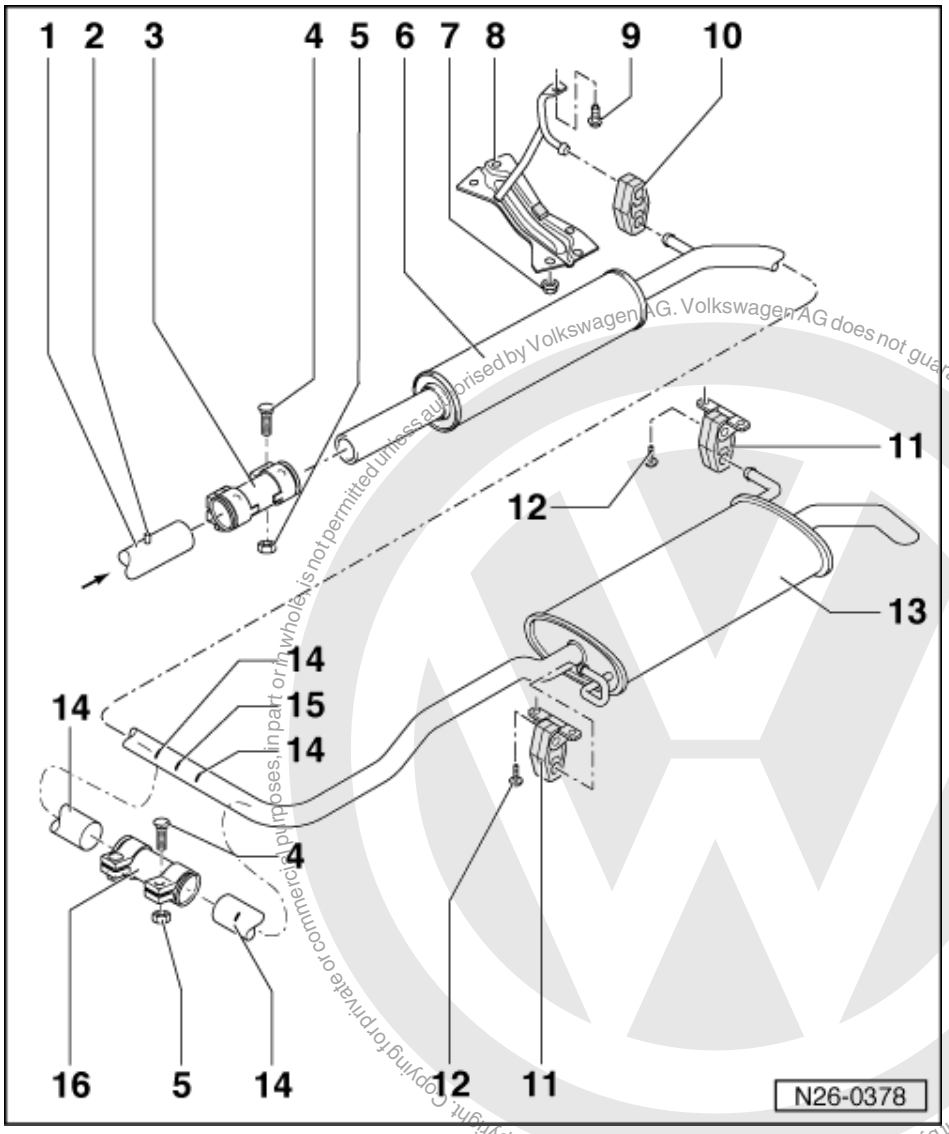
satelettronica

Polo Classic, Polo Estate

Version for Caddy => Page 159

1 Front exhaust pipe with catalyst
2 Stop
- Slide double clamp up to limit stop

3 Double clamp
4 Mushroom head screw
5 25 Nm
6 Front silencer1)
7 15 Nm
8 Connecting strut/bracket
9 25 Nm



10 Mounting
- Renew if damaged

11 Mounting
- Renew if damaged

satelettronica

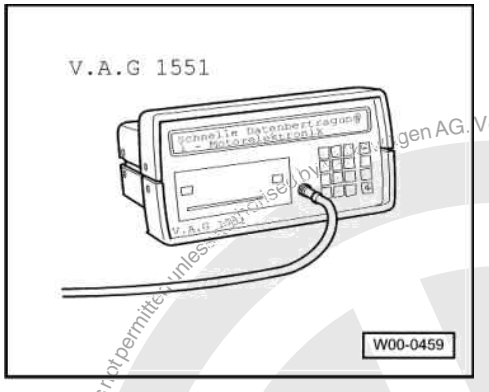
1.4 - Checking catalyst



Only engine codes ANW, AUD

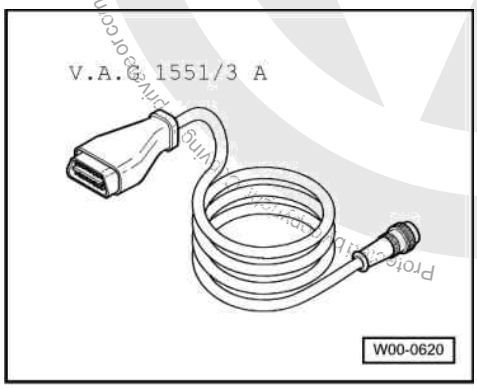
Special tools, workshop equipment, testers, measuring instruments and auxiliary items required

- V.A.G 1551 Fault reader

Note:

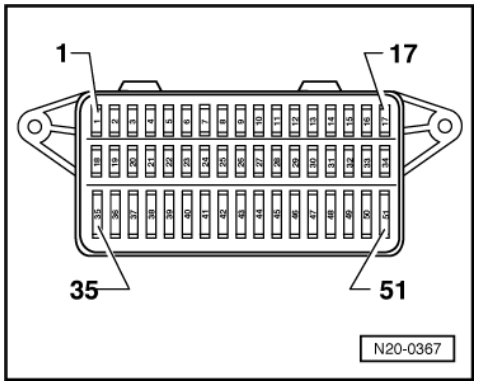
The vehicle system tester V.A.G 1552 can be used instead of the fault reader V.A.G 1551, however a print-out is not possible.

All functions of V.A.G 1551/1552 can also be carried out with the new tester VAS 5051.



- V.A.G 1551/3A Cable

Test conditions



- -> Fuse No. 1 must be OK.
- Vehicle stationary
- All electrical consumers, e.g. lights and rear window heating must be switched off.
- If the vehicle is equipped with an air conditioning system, this must be switched off.

Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
Protected by copyright. Copying, distribution and utilisation is not permitted unless authorised by Volkswagen AG.
Only for internal use, training purposes or commercial purposes in part or whole is not permitted unless authorised by Volkswagen AG.
satelettronica

- Exhaust system between catalyst and cylinder head must be free of leaks
- Coolant temperature must be at least 80 °C, =>display group 04, display zone 3.
- Intake air temperature less than 60°C
  =>display group 04, display zone 4

Functional check

- Connect fault reader V.A.G 1551 (V.A.G 1552). Start engine and select the engine control unit with the "Address word" 01. Connecting fault reader and selecting engine control unit:

=> Repair group 01; General to self-diagnosis; Connecting fault reader V.A.G 1551 and selecting engine control unit General to self-diagnosis Connecting fault reader V.A.G 1551 and selecting engine control unit

Lambda probe ageing diagnosis (cycle duration monitor)

-> Indicated on display:

```
Rapid data transfer          HELP
Select function XX
```

- Press keys 0 and 4 for the "Introduce basic setting" function and confirm entry with Q key.

-> Indicated on display:

```
Basic setting
Input display group number XXX
```

- Press keys 0, 3 and 4 for "Display group number 34" and confirm entry with Q key.

-> Indicated on display:
(1...4 = Display zones)

```
System in basic setting     34
     1     2     3     4
```

- Depress brake pedal.

  The engine speed is increased to
  approx. 1100...1300 rpm
  by the engine control unit

- Allow engine to run at increased engine speed until
  display zone 4 jumps from "Test OFF" to "Test ON". The catalyst temperature in
  display zone 2 must be a minimum of 400 °C.

Note:

This process can take a few minutes.

- Check the amplitude quality in display zone 3:
  Specification: 0.7... 2.00
- Allow engine to continue to run at increased engine speed until
  display zone 4 displays the specification "B1-P1 OK.".

If the display does not indicate as described:

- Interrogate fault memory:

=> Repair group 01; Fault memory; Interrogating and erasing fault memory of engine control unit Fault memory Interrogating and erasing fault memory of engine control unit

If the display indicates as described:

- Press C key.

  The engine speed drops to idling speed.

satelettronica

Catalyst diagnosis

Note:

The diagnosis will only be terminated if the Lambda probe ageing diagnosis (cycle duration monitor) is first successfully completed.

-> Indicated on display:

```
Basic setting
Input display group number XXX
```

- Press keys 0, 4 and 6 for "Display group number 46" and confirm entry with Q key.

-> Indicated on display:
(1...4 = Display zones)

```
System in basic setting     46
     1     2     3     4
```

- Depress brake pedal.

  The engine speed is increased to
  approx. 1100...1300 rpm
  by the engine control unit

- Allow engine to run at increased engine speed until
  display zone 4 jumps from "Test OFF" to "Test ON". The catalyst temperature in display zone 2 must be a minimum of 400 °C.
- Check the amplitude ratio in display zone 3:
  Specification: max. 0.50

- Allow the engine to continue to run at increased engine speed until
  display zone 4 displays "Cat B1 OK."

If the display does not indicate as described:

- Interrogate fault memory:

=> Repair group 01; Fault memory; Interrogating and erasing fault memory of engine control unit Fault memory Interrogating and erasing fault memory of engine control unit

If the display indicates as described:

- Press ⇒key.

  The engine speed drops to idling speed.

- Press keys 0 and 6 for the function "End output" and confirm entry with the Q key.
- Switch off ignition.
